#### **FEATURES**

 Material categorization: for definitions of compliance please see <a href="https://www.vishav.com/doc?99912"><u>www.vishav.com/doc?99912</u></a>

#### **APPLICATIONS**

Temperature measurement, sensing and control in industrial, consumer and telecom applications. For on-board sensing or for accurate remote sensing in metal probes or housings.

# **DESCRIPTION**

Models T, M, and C are conformally coated, leaded thermistors. The coating is baked-on phenolic for durability and long-term stability. Models M and C have tinned solid copper leads. Model T has solid nickel wires with Teflon® insulation.

#### Note

Maximum body diameter is dependent on selected curve number and value, the lower resistance values have the largest diameter. For a
specific part number within the given resistance ranges, please contact <a href="mailto:thermistor1@vishay.com">thermistor1@vishay.com</a> for maximum diameter information

# TOLERANCES AVAILABLE FOR TYPE T, M, AND C THERMISTORS

# **DESCRIPTION OF THERMISTOR TOLERANCES**

The many applications of thermistors have mandated the need for two basic tolerance schemes for these products - curve tracking and point match thermistors. An example of the resistance tolerance at various temperatures for the two different tolerancing methods is described in the following graph:

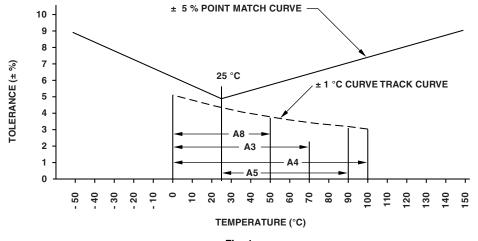

Fig. 1

# **CURVE TRACKING TOLERANCE**

Thermistors are calibrated at the high temperature of the curve track range and then final tested at the low temperature of the curve track range. This ensures that the thermistor will meet the specified temperature accuracy at every temperature within—the desired temperature range. Several temperature ranges are available and the accuracy of the thermistor may be  $\pm$  0.2 °C,  $\pm$  0.5 °C, and  $\pm$  1.0 °C. The curve tracking temperature ranges and their code designators are shown in figure 1 and "Standard Electrical Specifications for Curve Tracking Thermistors" table.

To specify, add the appropriate suffix from the following table to the part number.

Example: 01M1002SFB3 = curve 1, 10 k $\Omega$  at +25 °C, curve tracking to  $\pm$  0.5 °C from 0 °C to +70 °C

# **POINT MATCH TOLERANCE**

The standard leaded thermistors are calibrated and tested at 25 °C to a tolerance of  $\pm$  5 % or  $\pm$  10 %; however, tighter tolerance, point matched thermistors are readily available as are special point match temperatures to fit your application.

Since these thermistors have only one controlled point of reference (the point match temperature), the resistance at other temperatures is given by the specific curve resistance vs. temperature ratio.

# **POINT MATCH TOLERANCES VS. TEMPERATURE**

Point match resistance tolerances at temperatures other than 25 °C are not the same as at the calibration temperature. This difference is presented in figure 2.

The tolerance at any given temperature is the point match tolerance plus a manufacturing tolerance depending on the specific curve.
