

DC FANS

Wakefield-Vette produces a line of DC axial fans used on fan heat sinks which are commonly used on heatsinks to support BGAs, VGAs and CPU coolers or as chassis fans. The fans range in size from 30x10mm to 120x38mm with the most common sizes in between. The fans are available in 12 volt as the most common, but other voltages (5, 24 and 48) are possible upon request. The standard configurations include 2 wire, 3 wire (tach) or 4 wire (PWM) and can be customized to support any range of connectors.

General Fan Specifications

Operation Temperature:

-10C to +70C (+14F to +158F)

Storage Temperature:

-40C to +70C (-40F to +158F)

Bearing System Life:

2 Ball Bearing: L10 - 70k hrs @ 40C

Materials:

Black PBT(UL94V0), Glass Filled

Lead Wires:

Rating: UL1007 or UL1571, 80C

AWG: 24 or 26 or 28

Wire Length: 300mm +/- 10mm

3 Wire Standard: Red(+), Black(-), Yellow(Tach/FG)

4th wire Optional: Blue (PWM)

Insulation Resistance:

Standard: 10MΩ at 500VDC Minimum(frame to leads)

Dielectric Strength

Standard: 500VAC(50/60Hz) for 60 seconds with 1mA trip current allowable between frame and leads

Noise Data:

All noise readings are taken in dBA at 1meter from air intake side, fan suspended in a semi-anechoic chamber (<16 dBA max)

Protection:

Locked Rotor (Meets UL standard 72 hr test)

Reversed Polarity

Shock and Vibration:

Shock: Meets 100G at 2ms, half sine, X, Y, and Z axis

Vibration: Meets the amplitude of vibration :0.38mm

Frequency: 5-55 Hz

Duration: 60min / axis

Direction: X.Y.Z axis

Bearing Information

Dual Ball Bearing

The two ball bearing system is the industry standard for long life with a L10 of 70,000 hours. Other bearing choices, like sleeve or single ball are susceptible to impact damage which is why they can not support the high life requirement of most applications. One advantage of two ball bearing systems is that due to the small point load of the balls, they require less power to start rotation as they have less stiction (starting friction) than other bearing system which means the minimum starting power can be achieved with a lower current.

Bearing Lubrication, Wear and Failure

Bearing failure is the most common reason for a fan failure which is why bearing selection is so important. The bearing failure can be caused by multiple factors including lack of lubrication, excessive temperature or direct damage (excessive shock/vibration). A two ball bearing fan is better sealed to prevent the leak of the lubrication fluid than some of the other bearing systems. All fans typically will get noisier and rotate slower as the bearing systems wear and this can be a good indicator of pending bearing failure.

Optional Configuration

• 3 – Tach

• B – PWM + Tach

Termination Information

- Lead Length: 300mm +/- 10mm
- 2 Wire: Standard
- 3rd Wire: Tach (FG) Optional
- 4 wire PWM Optional

120x120x38mm

- MOTOR : DC single phase brushless motor
- FRAME : PBT (94V-0) ; IMPELLER : PBT(94V-0)
- OPERATING TEMP.: -10°C~70°C
- STORAGE TEMP.: -40°C~70°C
- WEIGHT : 280g
- Dual Ball Bearing
- Lead Length: 300mm +/- 10mm
- 2 Wire: Standard
- 3rd Wire: Tach (FG) Optional
- 4 wire PWM Optional
