Introduction

ADLINK's new generation x86 NEON Series features Intel® Atom™ quad core 1.91 GHz processors for increased computing power, and FPGA coprocessors and GPU for advanced image processing, both beyond the capabilities of conventional smart cameras. Rich software support and API compatibility enable easy migration from original x86 platforms, eliminating software and development language burdens across the platform and reducing time to market.

The NEON-1040/1021/1020 feature global shutter image sensors (sensor resolutions of 2 Mp and 4 Mp), and PWM lighting control support. NEON-1020 and NEON-1040 models feature leading resolutions up to 4Mp 60 fps and 2Mp 120 fps respectively. Rugged construction with IP67-rated housing and M12 connectors enables the NEON Series to withstand the harshest industrial environments.

Optimized I/O includes one additional slave GigE Vision camera connection, 4x isolated input, 4x isolated output, and VGA output for maximized integration with external devices. Additionally, flexible software development support, including GenTL support for image acquisition and Open CV programming, significantly benefits developers by easing migration from x86 platforms.

Software Support

- Windows® 7, Embedded Standard 7
