

## Features

- Industry Standard Outlines: SOD-323 and SOT-23 Packages
- High “Q” Abrupt and Hyperabrupt Junction Designs
- Single, Common Anode and Common Cathode Configurations
- Available for 3 Volt Battery Operated Circuits
- Priced for High Volume Commercial Applications
- Available in Tape and Reel
- Also Available as Chips

## Maximum Ratings ( $T_A = 25^\circ\text{C}$ )

Forward Current:	100 mA
Power Dissipation:	250 mW
Junction Temperature:	125°C
Storage Temperature:	-55 to 150°C
Operating Temperature:	-55 to 125°C

## Description

The surface mount plastic varactor diodes are designed for RF and Microwave applications in VCOs, electronically tunable filters and matching networks. Package offerings include the SOT-23 and the small footprint SOD-323 package. Alpha offers a comprehensive capability in capacitance values, package options and voltage ratings all aggressively priced for high volume commercial applications.

The SMV1247-001 to SMV1255-001 varactors were specifically designed for battery operated applications where 3 to 5 volts is available. These varactors have capacitance ratios of greater than 12 from 0.3 to 4.7 volts.

Alpha's hyperabrupt varactors are available in a wide variety of tightly specified capacitance values and

high capacitance ratios. They are available as single junctions and common cathode configurations where they may be employed in a back-to-back orientation to reduce distortion.

Alpha's abrupt junction varactors are noted for extremely high Q factor and are the preferred choice in applications that require low phase noise and high temperature stability.

The inductance of the SOT-23 package is typically 1.5 nH for each junction. Employing a common cathode SOT-23 with the varactor junctions connected in parallel reduces the inductance to approximately 0.9 nH. The inductance of a varactor in the SOD-323 package is approximately 1.5 nH.

## Electrical Characteristics ( $T_A = 25^\circ\text{C}$ )

### High Ratio Hyperabrupt Junction Varactors for Battery Operated Applications

Breakdown Voltage,  $V_B$  (10  $\mu\text{A}$ ):

► All plastic packaged varactors are available through distribution.

1. Capacitance measured at 1 MHz.
2. For multiple junction packages specifications apply to single junction.

Unpackaged chips are available for purchase by replacing the dash number with -000. For example, to purchase the chip from the SMV1408-001, the part number becomes SMV1408-000. The package capacitance of 0.13 pF should be subtracted from the  $C_T$  specifications to indicate junction capacitance.

► Chips available through distribution:

SMV1212-000  
SMV1213-000  
SMV1214-000  
SMV1233-000  
SMV1236-000
