

DATA SHEET

SE2431L: 2.4 GHz Front-End Module

Applications

- Smart meters
- In-home appliances
- Smart thermostats

Features

- Integrated:
 - PA with up to +24 dBm output power
 - LNA with programmable bypass
 - Antenna switching with Tx and Rx diversity function
- Suitable for Zigbee®, Bluetooth® Low Energy, and Bluetooth 1.0
- Typical low NF: 2 dB
- Operating temperature range: –40 °C to +125 °C
- Single-ended 50 Ω Tx/Rx RF interface
- Fast switch on/off time <1 μ s
- Supply operation: 2.0 V to 3.6 V
- Sleep mode current: 0.05 μ A typical
- Small QFN (24-pin, 3.0 mm x 4.0 mm x 0.9 mm Nickel-Palladium-gold [NiPdAu] plated) package (MSL1, 260°C per JEDEC J-STD-020)

Skyworks Green™ products are compliant with all applicable legislation and are halogen-free. For additional information, refer to *Skyworks Definition of Green™*, document number SQ04-0074.

Figure 1. SE2431L Block Diagram

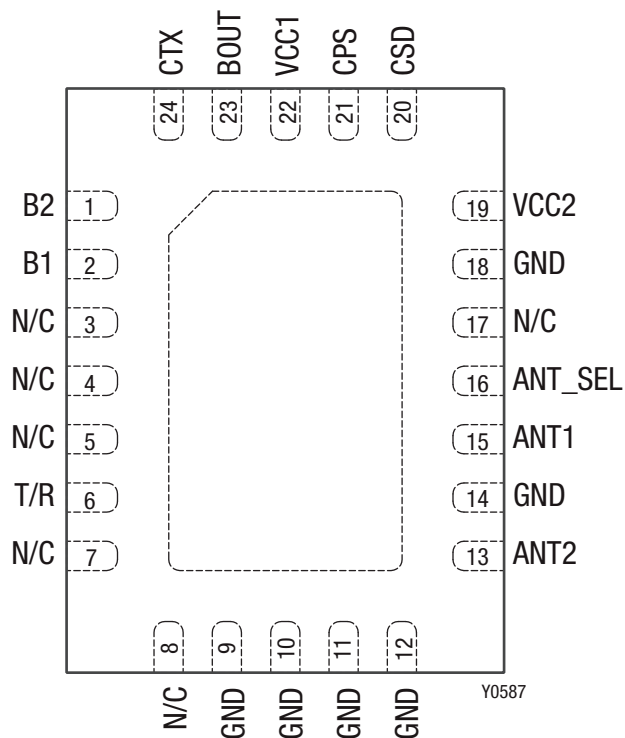

Description

The SE2431L is a high-performance, fully integrated RF front-end module (FEM), suitable for Zigbee, Bluetooth Low Energy, and Bluetooth 1.0 applications.

The SE2431L is designed for ease of use and maximum flexibility, with fully matched 50 Ω input and output, integrated inter-stage matching and harmonic filter, and digital controls that are compatible with 1.6 V to 3.6 V Complementary Metal Oxide Semiconductor (CMOS) levels.

The RF blocks operate over a wide supply voltage range from 2.0 V to 3.6 V, which allows the SE2431L to be used in battery-powered applications over a wide spectrum of the battery discharge curve.

A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

**Figure 2. SE2431L Pinout
(Top View)**

Table 1. SE2431L Signal Descriptions

Pin	Name	Description	Pin	Name	Description
1	B2	Connect through the bias resistor to pin 23	13	ANT2	Connect to 50 Ω antenna
2	B1	Connect through the bias resistor to pin 23	14	GND	Connect to PCB ground
3	N/C	Not connected internally to the device	15	ANT1	Connect to 50 Ω antenna
4	N/C	Not connected internally to the device	16	ANT_SEL	Connect to the GPIO signal to control the antenna switch (see Table 8)
5	N/C	Not connected internally to the device	17	N/C	Not connected internally to the device
6	T/R	Transmit/receive port from/to transceiver, single-ended 50 Ω	18	GND	Connect to PCB ground
7	N/C	Not connected internally to the device	19	VCC2	Connect to positive supply
8	N/C	Not connected internally to the device	20	CSD	Connect to the GPIO signal to control the SE2431L modes (see Table 8)
9	GND	Connect to PCB ground	21	CPS	Connect to the GPIO signal to control the SE2431L modes (see Table 8)
10	GND	Connect to PCB ground	22	VCC1	Connect to positive supply
11	GND	Connect to PCB ground	23	BOUT	Connect to pins 1 and 2 through the bias resistors
12	GND	Connect to PCB ground	24	CTX	Connect to the GPIO signal to control the SE2431L modes (see Table 8)

Electrical and Mechanical Specifications

The absolute maximum ratings of the SE2431L are provided in Table 2. The recommended operating conditions are specified in Table 3, and electrical specifications are provided in Tables 4 through 7.

The state of the SE2431L is determined by the logic provided in Table 8.

Table 2. SE2431L Absolute Maximum Ratings¹

Parameter	Symbol	Minimum	Maximum	Units
Supply voltage 1	V _{cc1}	−0.3	3.6	V
Supply voltage 2	V _{cc2}	−0.3	3.6	V
Control pin voltages		−0.3	3.6	V
Operating temperature	T _{OP}	−40	+125	°C
Storage temperature	T _{STG}	−40	+125	°C
Tx output power at ANT1 or ANT2 port into 50 Ω load	P _{OUT_TX_MAX}		+24	dBm
Tx input power at TR port	P _{IN_TX_MAX}		+6	dBm
Rx input power at ANT1 or ANT2 ports	P _{IN_RX_MAX}		+10	dBm
Rx input power at ANT1 or ANT2 ports in bypass mode	P _{IN_RX_BYPASS_MAX}		+15	dBm
Electrostatic discharge: Human Body Model (HBM), Class 1C	ESD		1000	V

¹ Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

ESD HANDLING: Although this device is designed to be as robust as possible, electrostatic discharge (ESD) can damage this device. This device must be protected at all times from ESD when handling or transporting. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD handling precautions should be used at all times.

Table 3. Recommended Operating Conditions

Parameter	Symbol	Minimum	Typical	Maximum	Units
Ambient temperature	T _A	−40	+25	+125	°C
Supply voltage on VCC pins	V _{cc1}	2.0	3.0	3.6	V
Supply voltage on VCC pins	V _{cc2}	2.0	3.0	3.6	V

Table 4. SE2431L Electrical Specifications: DC¹**(VCC = 3 V, TA = +25 °C, as Measured on the Evaluation Board [De-Embedded to the Device], Unless Otherwise Noted)**

	ANT2 port enabled	X	1	X	1

¹ The logic 0 and 1 levels are compliant to V_{IL} and V_{IH}, respectively, as specified in Table 5.² All controls must be at logic 0 to achieve the specified sleep current.

Evaluation Board Description

The SE2431L Evaluation Board is used to test the performance of the SE2431L front-end module (FEM). An Evaluation Board schematic diagram is provided in Figure 3. A reference design schematic is shown in Figure 4. A photograph of the Evaluation Board is shown in Figure 5. A Bill of Materials (BOM) for the Evaluation Board is provided in Table 9.

Evaluation Board Setup Procedure

Connect Supply

1. Connect J32, J34, and J35 to 50 Ω instruments. Terminate all unused ports (if applicable) with 50 Ω.
2. Connect the supply ground to pin 20 of the J36 header.
3. Connect 3.0 V to pins 1, 3, and 16 of J36.
4. Refer to Table 8 for information about selecting the required RF path and for antenna port control.

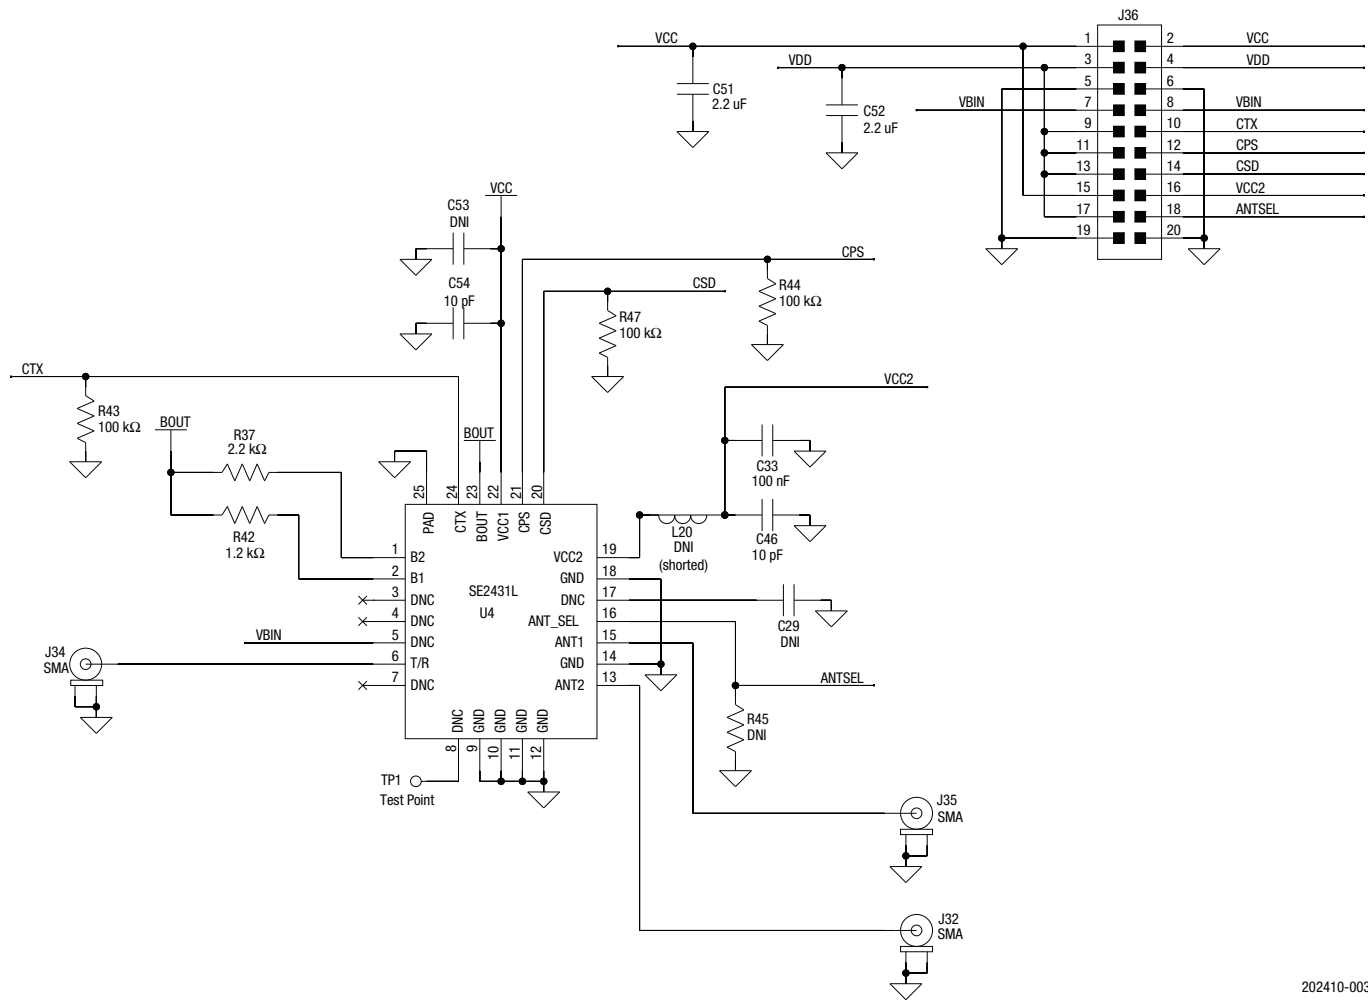

Measure TX Performance

Apply an RF signal to connector J34 (TR) to monitor the 2.4 GHz amplifier performance. Monitor the output power on connector J35 (ANT1) or J32 (ANT2).

Measure RX Performance

Apply an RF signal to connector J35 (ANT1) or J32 (ANT2) to monitor the 2.4 GHz LNA performance. Monitor the output signal on connector J34 (TR).

CAUTION: Be careful not to overdrive the amplifier by applying too much RF on the input to the device. A suitable starting input power is –20 dBm.

Figure 5. SE2431L Evaluation Board

Notes to Figure 5:

1. R44, R45, R43, R47, and C52 are for evaluation purposes and can be removed in the final application.
2. The Skyworks Evaluation Board contains 0 Ω resistors and footprints for non-populated components that are not shown in the schematic.
3. L20 is an 0402 SMT placement with the pads shorted together. This provides 3 mm of track between the Vcc2 pin and C46. It should be included in the application layout.

Package Dimensions

The PCB layout footprint for the SE2431L is provided in Figure 6. A typical part marking diagram is shown in Figure 7. Package dimensions are shown in Figure 8, and tape and reel dimensions are provided in Figure 9.

Package and Handling Information

Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperatures during solder assembly.

The SE2431L is rated to Moisture Sensitivity Level 1 (MSL1) at 260 °C, and can be used for lead or lead-free soldering. For additional information, refer to the Skyworks Application Note, *Solder Reflow Information*, document number 200164.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.

Stencil Pattern
(Note 5)

57% Solder Coverage
on Center Pad

Notes:

1. All dimensions are in millimeters.
2. Dimensions and tolerances per ASME 14.5M-1994.
3. Unless specified, dimensions are symmetrical about center lines.
4. Via hole recommendations:
0.025 mm Cu via wall plating (minimum), via holes to be filled with conductive paste and plated over.
5. Stencil recommendations:
0.10 mm stencil thickness, laser cut apertures, trapezoidal walls and rounded corners offer better paste release.
6. Solder mask recommendations:
Contact board fabricator for recommended solder mask offset and tolerance.
