

### **DATA SHEET**

# SKYA21029: 0.1 to 3.8 GHz SP4T Antenna Switch

# **Applications**

- 2G/3G/4G/4G LTE, 4G LTE-A
- Embedded cellular telematics modules
- . OBD-II cellular modems

### **Features**

- Broadband frequency range: 0.1 to 3.8 GHz
- Low insertion loss: 0.45 dB typical @ 2.7 GHz
- High isolation: >31 dB @ 2.7 GHz
- $\bullet$  Internal 50  $\Omega$  port to control diversity antenna impedance when device is not in use
- · Integrated logic
- Automotive Level-3 PPAP available upon request
- IMDS material declaration available at production release
- Extended production life to support automotive requirements
- Independent BOM management to minimize PCN risk
- Small QFN (14-pin, 2.0 x 2.0 mm) package (MSL1, 260 °C per JEDEC J-STD-020)

Skyworks Green<sup>TM</sup> products are compliant with all applicable legislation and are halogen-free. For additional information, refer to *Skyworks Definition of Green*<sup>TM</sup>, document number SQ04-0074.

Figure 1. SKYA21029 Block Diagram

# **Description**

The SKYA21029 is a single-pole, four-throw (SP4T) antenna switch with an internal 50  $\Omega$  termination. The high-linearity performance and low insertion loss achieved by the SKYA21029 make it an ideal choice for embedded cellular telematics modules  $\,$  and OBD-II cellular modems.

The symmetric port designs provide flexibility in signal routing for both receive diversity and higher power TD-SCDMA/TDD-LTE, WCDMA/FDD, and LTE transmit/receive applications.

Switching is controlled by three CMOS/TTL-compatible control voltage inputs (V1, V2, and V3). Depending on the logic voltage level applied to the control pins, the ANT pin is connected to one of four switched RF outputs (RF1 to RF4) using a low insertion loss path, while the paths between the ANT pin and the other RF pins are in a high isolation state.

The antenna path can also be closed on a 50  $\Omega$  load when it needs to be terminated. The 50  $\Omega$  load is internally grounded. No external blocking capacitors are required on the RF paths unless VDC is externally applied.

The SKYA21029 is manufactured in a compact, 14-pin 2.0 x 2.0 mm, Quad Flat No-Lead (QFN) package.

A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

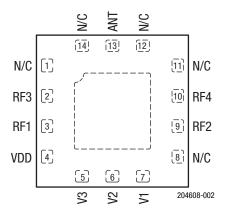

Figure 2. SKYA21029 Pinout (Top View)

Table 1. SKYA21029 Signal Descriptions<sup>1</sup>

| Pin | Name | Description          | Pin | Name | Description   |
|-----|------|----------------------|-----|------|---------------|
| 1   | N/C  | Not connected        | 8   | N/C  | Not connected |
| 2   | RF3  | RF I/O path 3        | 9   | RF2  | RF I/O path 2 |
| 3   | RF1  | RF I/O path 1        | 10  | RF4  | RF I/O path 4 |
| 4   | VDD  | DC power supply      | 11  | N/C  | Not connected |
| 5   | V3   | DC control voltage 3 | 12  | N/C  | Not connected |
| 6   | V2   | DC control voltage 2 | 13  | ANT  | Antenna port  |
| 7   | V1   | DC control voltage 1 | 14  | N/C  | Not connected |

<sup>1</sup> Bottom ground paddles must be connected to ground.

### **Functional Description**

The SKYA21029 includes an internal negative voltage generator and decoder that eliminate the need for external DC blocking capacitors on the RF ports. No external components are required for proper operation. DC decoupling capacitors may be added on the VDD and control lines if necessary.

Switching is controlled by three control voltage inputs, V1, V2, and V3. Depending on the logic voltage level applied to the control pins, the antenna pin is connected to one of four switched RF outputs or a 50  $\Omega$  termination.

Shutdown mode is enabled by connecting all three control pins (V1, V2, and V3) to logic high. This mode reduces the overall current consumption of the device to 5  $\mu A$  typical.

### **Electrical and Mechanical Specifications**

The absolute maximum ratings of the SKYA21029 are provided in Table 2. Electrical specifications are provided in Table 3.

The state of the SKYA21029 is determined by the logic shown in Table 4.

The isolation matrix shown in Table 5 provides the port-to-port and antenna-to-port isolation for all available RF states at four different frequencies: 1.0 GHz, 2.0 GHz, 2.7 GHz, and 3.8 GHz.

Table 2. SKYA21029 Absolute Maximum Ratings<sup>1</sup>

| Parameter   | Symbol          | Minimum | Maximum      | Units      |
|---|-----------------|---------|--------------|------------|
| Supply voltage  | V <sub>DD</sub> | 2.5     | 5.0          | V          |
| Control voltage (V1, V2, and V3)  | VCTL            | -0.5    | +3.0         | V          |
| RF power applied to "on" arm (RF1 to RF4) or ANT port:                  | Pin             |         |              |            |
| 0.1 to 2.7 GHz (RF1 to RF4 arm)<br>3.4 to 3.8 GHz (RF2 to RF4 arm)      |                 |         | +37.5<br>+35 | dBm<br>dBm |
| RF power applied to "off" arm (RF1 to RF4)                              | Pin             |         | +33          | dBm        |
| RF power applied to antenna in the 50 $\Omega$ switched RF output state | Pin             |         | +27          | dBm        |
| Operating temperature   | Тор             | -40     | +85          | °C         |
| Storage temperature   | Тѕтс            | -55     | +150         | °C         |
| Electrostatic discharge:  | ESD             |         |              |            |
| Human Body Model (HBM)  |                 |         | 500          | V          |

Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

**ESD HANDLING**: Although this device is designed to be as robust as possible, electrostatic discharge (ESD) can damage this device.

This device must be protected at all times from ESD when handling or transporting. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection.

Industry-standard ESD handling precautions should be used at all times.

Table 3. SKYA21029 General Electrical Specifications  $^1$  (VDD = 2.6 V, V1 = V2 = V3 = 0/1.8 V, PIN = 0 dBm, Top = +25 °C, Characteristic Impedance [Zo] = 50  $\Omega$ , Unless Otherwise Noted)

### **Evaluation Board Description**

The SKYA21029 Evaluation Board is used to test the performance of the SKYA21029 SP4T switch. An Evaluation Board schematic diagram is provided in Figure 3. An assembly drawing for the Evaluation Board is shown in Figure 4.

# **Package Dimensions**

The PCB layout footprint for the SKYA21029 is provided in Figure 5. Typical part markings are shown in Figure 6. Package dimensions are shown in Figure 7, and tape and reel dimensions are provided in Figure 8.

# **Package and Handling Information**

Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SKYA21029 is rated to Moisture Sensitivity Level 1 (MSL1) at 260 °C. It can be used for lead or lead-free soldering. For additional information, refer to the Skyworks Application Note, *Solder Reflow Information*, document number 200164.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.

### DATA SHEET • SKYA21029: SP4T ANTENNA SWITCH

### Notes:

- Carrier tape must meet all requirements of Skyworks GP01-D232 procurement spec for tape and reel shipping.
   Carrier tape shall be black conductive polycarbonate bakeable material at 125 °C temperature.

- Cover tape shall be transparent conductive with 5.40 mm width.
   ESD-surface resistivity must meet all ESD requirements of Skyworks specified on GP01-D232. 4. ESD-surface resistivity must meet all5. All measurements are in millimeters.
