ITT

ENGINEERED FOR LIFE

We Connect

When it matters most

ITT's Veam brand is a leading global manufacturer of connector products serving international customers in multiple end markets.

In an increasingly global economy, getting from Point A to Point B on time and on budget is more important than ever. VEAM connectors protect the world's products and people in transit so they can get to where they're going with maximum efficiency.

Proven quality, reliability and expertise

The ITT Cannon difference

- Global capabilities & local support
- Proven application expertise
- A century of interconnect leadership
- A committed innovator & business partner

About ITT

ITT is a diversified leading manufacturer of highly engineered critical components and customized technology solutions for the energy, transportation and industrial markets.

Building on its heritage of innovation, ITT partners with its customers to deliver enduring solutions to the key industries that underpin our modern way of life. Founded in 1920, ITT is headquartered in White Plains, N.Y., with employees in more than 35 countries and sales in a total of approximately 125 countries. For more information, visit www.itt.com.

Veam FRCIR-M12 Series Connectors

THE CHALLENGE

As railway technology and safety standard advance, so must the electronics supporting applications like engine diagnostics, brake controls, environmental conditioning, passenger display systems, networking and lighting control. This coupled with the increasing demand for data grouping and through-put is why ITT Veam was approached with this challenge.

The customer requested an interconnect solutions to establish reliable connection between coaches. In particular, these solution for data transmission must bundled multiple Ethernet, Video, WTB, MVB and signal lines in general into a singular connector while meeting all required regulations.

THE SOLUTION

Listening to our customer requests, ITT Veam met the challenge by developing the FRCIR-M12 Series. This series is a combination of M12 contacts mounted into FRCIR connector series hardware. With this pioneering design, four conductor wires and the associated braid from shielded cables are integrated into the M12 contact. A special plastic insert groups multiple M12 contacts and their cables into a singular connector. With this solution, the customer may now transfer local data from Ethernet, MVB, WTB, Video lines and signal in general, according to VG95234, within the same connector.

The Veam Difference:

- Smaller footprint by combining multiple lines in the same connector
- Suitable for harsh environment
- Available with up to 500h salt spray resistant RoHS conductive plating and considering non conductive plating up to 1000h
- Superior shielding performance

- Seven Connector Configurations
 - › 1 way based on size 18 shell
 - › 2-3 and 4 way based on size 32 shell
 - › 7 way based on size 290 shell
 - › 7 way plus 6 size 12 contacts based on size 290 shell
- Customized Contact Configurations
 - › 1-Pole repairable (CXI-series)
 - › 2-Poles crimp and repairable (TX-series)
 - › 4-Poles crimp and repairable (QX-series)
 - › 8-Poles repairable (EXI-series)

2- CONVERTERS / INVERTERS

3- ELECTRIC COUPLERS

4- DATA COMMUNICATION

FRCIRM12 PRODUCT INTRODUCTION

- The FRCIRM12 connector series is based on VG95234 specification.
- FRCIRM12 connectors are available in 7 size arrangements based on the following shell size 18, 32 and 290.
- The contact system enables easy insertion and removal. The inserts are composed of halogen free hard plastic material that results in a very low fire hazard.
- Stainless steel bayonet pins riding along the three Bayonet ramps (machined into the receptacle shell) achieve the connector coupling. Coupling integrity is guaranteed by:
 - Three stainless steel pins at the critical wear points of the receptacle shell bayonet ramps
 - An audible click when fully mated
 - Alignment of three yellow colored dots when fully mated
- The stainless steel pins installed on the critical wear points of the ramps, the dynamic coupling gasket at the base of the plugshell, the flat and the wave washer between the coupling nut and the plugshell, are the key features that allow to prevent the unmating of the connection in case of vibration and guarantees the high reliability of the bayonet mating system.
- IP67 environmental sealing of mated connectors is achieved by compression of coupling gasket; at the rear side is achieved by using the grommet with an appropriate accessory.
- Each layout allowed to use different contacts type following data transmission request giving customer unique layout with multiple choice.
- The innovative contact technology enable data signals to be interconnected in one operation up to 7 lines.

Additional Information on Ethernet and Cabling Standards

Ethernet based technologies are defined by IEEE 802.1 and 802.3 standard families. In particular, the IEEE 802.3 group specifies the performance and versions for wired networks. There are no specific cabling standards for railcars, so industry players mainly refer to ISO/IEC 11801 – information technology – generic cabling for customer premises specifications for transmission.

ISO/IEC 11801 specifies general-purpose telecommunication cabling systems (structured cabling) that are suitable for a wide range of applications, such as analog and ISDN telephony, various data communication standards, control systems, factory automation, etc. The standard covers both balanced copper cabling and optical fiber cabling.

This standard specifies generic installation and design topologies that are characterized by a “category” or “class” of transmission performance. It defines several link/channel classes and cabling categories of twisted-pair copper interconnects, which differ in the maximum frequency for which a certain channel performance is required:

- Class A: link/channel up to 100 kHz using Category 1 cable/connectors
- Class B: link/channel up to 1 MHz using Category 2 cable/connectors
- Class C: link/channel up to 16 MHz using Category 3 cable/connectors
- Class D: link/channel up to 100 MHz using Category 5e cable/connectors
- Class E: link/channel up to 250 MHz using Category 6 cable/connectors
- Class EA: link/channel up to 500 MHz using Category 6A cable/connectors
- Class F: link/channel up to 600 MHz using Category 7 cable/connectors
- Class FA: link/channel up to 1000 MHz using Category 7A cable/connectors

ISO/IEC 11801-Annex E, Acronyms for balanced cables, provides a system to specify the exact construction for both unshielded and shielded balanced twisted-pair cables. It uses three letters - U for unshielded, S for braided shielding, and F for foil shielding - to form a two-part abbreviation in the form of xx/xTP, where the first part specifies the type of overall cable shielding, and the second part specifies shielding for individual cable elements.

Common cable types include U/UTP (unshielded cable); U/FTP (individual pair shielding without the overall screen); F/UTP, S/UTP, or SF/UTP (overall screen without individual shielding); and F/FTP, S/FTP, or SF/FTP (overall screen with individual foil shielding).

ETHERNET STRUCTURED CABLING STANDARDS AND CORRESPONDING FREQUENCY RANGES

ISO/IEC 11801 also defines several classes of optical fiber interconnect:

OM1: Multimode fiber type 62.5 μm core; minimum modal bandwidth of 200 MHz·km at 850 nm

- OM2: Multimode fiber type 50 μm core; minimum modal bandwidth of 500 MHz·km at 850 nm
- OM3: Multimode fiber type 50 μm core; minimum modal bandwidth of 2000 MHz·km at 850 nm
- OM4: Multimode fiber type 50 μm core; minimum modal bandwidth of 4700 MHz·km at 850 nm
- OS1: Single-mode fiber type 1 db/km attenuation
- OS2: Single-mode fiber type 0.4 db/km attenuation

The cabling standards are subsequently referenced in applications standards, such as IEEE for Ethernet, as a minimum level of performance necessary to ensure application operation.

Table 1 below explains the correspondence between Ethernet applications and twisted-pair wiring systems.

| Class | Ethernet applications | Maximum application data rate | Number of pairs needed | Maximum Bandwidth | Cable construction | Maximum Channel Length |
|----------------|-----------------------|-------------------------------|------------------------|-------------------|------------------------|------------------------|
| C | 10 Base-T | 10 Mbps | 2 | 16 MHz | Unshielded or Shielded | 100 m |
| D | 10 Base-T | 10 Mbps | 2 | 100 MHz | Unshielded or Shielded | 100 m |
| | 100 Base-TX | 100 Mbps 1 | 2 | | | |
| | 1000 Base-T | Gbps | 4 | | | |
| E | 10 Base-T | 10 Mbps | 2 | 250 MHz | Unshielded or Shielded | 100 m |
| | 100 Base-TX | 100 Mbps 1 | 2 | | | |
| | 1000 Base-T | Gbps | 4 | | | |
| E _A | 10 Base-T | 10 Mbps | 2 | 500 MHz | Unshielded or Shielded | 100 m |
| | 100 Base-TX | 100 Mbps 1 | 2 | | | |
| | 1000 Base-T | Gbps | 4 | | | |
| | 10 GBase-T | 10 Gbps | 4 | | | |

FRCIRM12 TECHNICAL INFORMATION

MATERIAL CONSTRUCTION

Shells: Aluminum alloy

Available Platings: T240: Blue Zn/Ni - Conductive

T39: Black varnish - Non-conductive

T891: Black hard anodizing - Non-conductive

Insulator: Low fire hazard thermoplastic EN45545 (HL3) R22-23.

Grommet: Low fire hazard silicone rubber EN45545 (HL3) R22-23

Contacts: Copper alloy with gold plating

Zama alloy zink-nickel plating

ENVIRONMENTAL PERFORMANCE

Operating Temperature: -40°C to +100°C

Corrosion Resistance: T240: Blue Zn/Ni – 500 H Salt Spray - Conductive

T108: Zinc/Cobalt – 200 H salt Spray - Conductive

T39: Black varnish – 500 H Salt Spray - Non-conductive

T891: Black hard anodizing – 1000 H Salt Spray - Non-conductive

Water Protection: IP67 in mated condition when used with proper backshell and accessories

Fluid Resistance: Gas, oil, mineral oil, acid bath per NF F 61-030

Fire and smoke: Rated HL3 - R22/R23 acc. to EN 45545-2

MECHANICAL PERFORMANCE

Durability: 500 mating cycles minimum (CX--,TX--, QX-- contacts)

100 mating cycles minimum (EXI-- contacts)

Bayonet Coupling Torque: Per VG95234

Vibration: Cat 1B according to EN61373

Min. Retention force of the contact in the insulator:

70N for contacts #16

90N for contacts #12

200N for contacts #CX--, #TX--, #QX-- and #EXI--

ELECTRICAL PERFORMANCE

Insulation Resistance: 5000 MOhm

Rated and test voltage: consult single layout

Contact Current Rating: see contacts table

| Layout | Shell Size | Contacts Size | No of Contacts | Current | | Voltage | |
|------------|------------|---------------|-------------------------------------|-------------------------|------------|------------------|---------|

* Applicable for short time

FRCIRM12 COMPONENTS DESCRIPTION

PANEL MOUNTED CONNECTOR

Flange - holds the insert and incorporates an alignment key to position the insert. The Flange accommodates either the socket or pin insert to reverse gender. Bayonet Coupling ramps provide cam action for coupling and uncoupling with the plug connectors. Stainless steel pins, at the top of the ramps, ensure positive locking and long service life.

Insert (pin or socket) - removable, orientable, retains the contacts and can be used in either Flange or plugshells.

Contacts (pin or socket) - suitable to be used with the wire conductors.

Retaining Ring - retains the insert into the shell.

PLUG CONNECTOR

Coupling nut - Provides cam force when mating and un-mating mechanical system for coupling and uncoupling of the connectors.

Plugshell - Holds the insert and incorporates an alignment key to position the insert. The plugshell accommodates either the socket or pin insert to reverse gender.

Insert (pin or socket) - Removable, orientable, retains the contacts and can be used in either Flange or plugshells.

Contacts (pin or socket) - Suitable to be used with the wire conductors.

Retaining Ring - Retains the insert into the shell.

FRCIRM12

PRODUCT SAFETY INFORMATION

THIS NOTE MUST BE READ IN CONJUNCTION WITH THE PRODUCT DATA SHEET/CATALOG. FAILURE TO OBSERVE THE ADVICE IN THIS INFORMATION SHEET AND THE OPERATING CONDITIONS SPECIFIED IN THE PRODUCT DATA SHEET/ CATALOG COULD RESULT IN HAZARDOUS SITUATIONS.

1. MATERIAL CONTENT AND PHYSICAL FORM

Electrical connectors do not usually contain hazardous materials. They contain conducting and non-conducting materials and can be divided into two groups.

- a) Printed circuit types and low cost audio types which employ all plastic insulators and casings.
- b) Rugged, Fire Barrier and High Reliability types with metal casings and either natural rubber, synthetic rubber, plastic or glass insulating materials. Contact materials vary with type of connector and also application and are usually manufactured from either: Copper, copper alloys, nickel, alumel, chromel or steel. In special applications, other alloys may be specified.

2. FIRE CHARACTERISTICS AND ELECTRIC SHOCK HAZARD

There is no fire hazard when the connector is correctly wired and used within the specified parameters. Incorrect wiring or assembly of the connector or careless use of metal tools or conductive fluids, or transit damage to any of the component parts may cause electric shock or burns. Live circuits must not be broken by separating mated connectors as this may cause arcing, ionization and burning. Heat dissipation is greater at maximum resistance in a circuit. Hot spots may occur when resistance is raised locally by damage, e.g. cracked or deformed contacts, broken strands of wire. Local overheating may also result from the use of the incorrect application tools or from poor quality soldering or slack screw terminals. Overheating may occur if the ratings in the product Data Sheet/Catalog are exceeded and can cause breakdown of insulation and hence electric shock. If heating is allowed to continue it intensifies by further increasing the local resistance through loss of temper of spring contacts, formation of oxide film on contacts and wires and leakage currents through carbonization of insulation and tracking paths. Fire can then result in the presence of combustible materials and this may release noxious fumes. Overheating may not be visually apparent. Burns may result from touching overheated components.

3. HANDLING

Care must be taken to avoid damage to any component parts of electrical connectors during installation and use. Although there are normally no sharp edges, care must be taken when handling certain components to avoid injury to fingers. Electrical connectors may be damaged in transit to the customers, and damage may result in creation of hazards. Products should therefore be examined prior to installation/use and rejected if found to be damaged.

4. DISPOSAL

Incineration of certain materials may release noxious or even toxic fumes.

5. APPLICATION

Connectors with exposed contacts should not be selected for use on the current supply side of an electrical circuit, because an electric shock could result from touching exposed contacts on an unmated connector. Voltages in excess of 30 V ac or 42.5 V dc are potentially hazardous and care should be taken to ensure that such voltages cannot be transmitted in any way to exposed metal parts of the connector body. The connector and wiring should be checked, before making live, to have no damage to metal parts or insulators, no solder blobs, loose strands, conducting lubricants, swarf, or any other undesired conducting particles. Circuit resistance and continuity check should be made to make certain that there are no high resistance joints or spurious conducting paths. Always use the correct application tools as specified in the Data Sheet/Catalog. Do not permit untrained personnel to wire, assemble or tamper with connectors. For operation voltage please see appropriate national regulations.

IMPORTANT GENERAL INFORMATION

(i) Air and creepage paths/Operating voltage. The admissible operating voltages depend on the individual applications and the valid national and other applicable safety regulations. For this reason the air and creepage path data are only reference values. Observe reduction of air and creepage paths due to PC board and/or harnessing.

(ii) Temperature

All information given are temperature limits. The operation temperature depends on the individual application.

(iii) Other important information

Cannon continuously endeavors to improve their products. Therefore, Cannon products may deviate from the description, technical data and shape as shown in this catalog and data sheets.

All data subject to change without notice.

ADDITIONAL VEAM SOLUTIONS FOR RAIL INFRASTRUCTURE AND ROLLING STOCK APPLICATIONS

CIR/FRCIR Series

- Available with 1-159 poles, 256 layouts, 2,000 matching cycles
- Flame retardant (EN45545 HL3 - NFPA 130)
- Aluminium shells up to 500h salt spray resistance
- Stainless steel & marine bronze available

DSR Series

- Double start ratchet threaded coupling mechanism with 5 Keyways
- Flame retardant (EN45545 HL3 - NFPA130)
- High shock resistance

VCN Series

- Available with 4-70 poles, 15 layouts
- Compliant to mass transit specification NF F 61-030. Approved & qualified by SNCF & RATP
- Flame retardant UL94V-0 & NFF thermoplastic insert
- Easy contact insertion and extraction 2,000 Mating Cycles

Power Plate Series

- 2-3-4 pole versions, highly customizable according cable, current and voltage requirements
- Operating voltage according to EN50124-1
- Fast and easy coupling system with two screws or with latch mechanism

CIR290 Series

- Available with 3 to 101 poles, from 7.5 to 350 A, 2,000 mating cycles
- Flame retardant (EN45545 HL3 - NFPA 130)
- Aluminium shells up to 500h salt spray resistance

VRPC Series

- Available with 3,6,12 way layouts, machined or stamped contacts
- Smoke & fire resistance per NFF16-101 & NFF16-102
- IP20 or IP67
- Rear removable cable support or Rear backshells

HTB Series

- High Temperature Bayonet connector, tested at 800°C for 30 minutes
- Exceeds the standard ISO 834-1
- Creates a REI 0 fire barrier according EN13501-2 / EN 1363-1

CIR Fiber Optic Series

- Available with 4 to 22 multimode or singlemode fibers
- Supports communication speed up to beyond 10 Gbps
