

High Luminous Efficacy Red LED Emitter

Key Features

- High Luminous Efficacy 5W Red LED
- Ultra-small foot print 4.4mm x 4.4mm
- Surface mount ceramic package with integrated glass lens
- Very high Luminous Flux density
- Autoclave complaint (JEDEC JESD22-A102-C)
- JEDEC Level 1 for Moisture Sensitivity Level
- Lead (Pb) free and RoHS compliant
- Reflow solderable (up to 6 cycles)
- Emitter available on Standard or Miniature MCPCB (optional)

Typical Applications

- Architectural Lighting
- Stage and Entertainment Lighting
- Traffic and signal Lights
- Machine Vision
- Beacons
- Emergency Lighting
- Medical
- Automotive & Marine Lighting

Description

The LZ1-00R100 Red LED emitter provides 5W power in an extremely small package. With a 4.4mm x 4.4mm ultrasmall footprint, this package provides exceptional luminous flux density. The patent-pending design has unparalleled thermal and optical performance. The high quality materials used in the package are chosen to optimize light output and minimize stresses which results in monumental reliability and lumen maintenance. The robust product design thrives in outdoor applications with high ambient temperatures and high humidity.

Part number options

Base part number

Part number	Description
LZ1-00R100-xxxx	LZ1 emitter
LZ1-10R100-xxxx	LZ1 emitter on Standard Star MCPCB
LZ1-30R100-xxxx	LZ1 emitter on Miniature round MCPCB

Bin kit option codes

R1, Red (623nm)				
Kit number suffix	Min flux Bin	Color Bin Range	Description	
0000	М	R2 – R2	full distribution flux; full distribution wavelength	

Notes:

1. Default bin kit option is -0000

COPYRIGHT © 2015 LED ENGIN. ALL RIGHTS RESERVED.

Luminous Flux Bins

	Table 1:	
Bin Code	Minimum Luminous Flux (Φ _V) @ I _F = 1000mA ^[1,2] (Im)	Maximum Luminous Flux (Φ _V) @ I _F = 1000mA ^[1,2] (lm)
М	117	146
Ν	146	182
Р	182	228

Notes for Table 1:

1. Luminous flux performance guaranteed within published operating conditions. LED Engin maintains a tolerance of

± 10% on flux measurements.

2. Future products will have even higher levels of luminous flux performance. Contact LED Engin Sales for updated information.

Dominant Wavelength Bins

	Table 2:		
Bin Code	Minimum Dominant Wavelength (λ _D) @ I _F = 1000mA ^[1,2] (nm)	Maximum Dominant Wavelength (λ _D) @ I _F = 1000mA ^[1,2] (nm)	
R2	618	630	

Notes for Table 2:

1. Dominant wavelength is derived from the CIE 1931 Chromaticity Diagram and represents the perceived hue.

2. LED Engin maintains a tolerance of \pm 1.0nm on dominant wavelength measurements.

Forward Voltage Bins

	Table 3:	
	Minimum	Maximum
Bin Code	Forward Voltage (V _F)	Forward Voltage (V _F)
Bin Code	@ I _F = 1000mA ^[1]	@ I _F = 1000mA ^[1]
	(V)	(V)
0	2.24	2.9

Notes for Table 3:

1. LED Engin maintains a tolerance of ± 0.04V for forward voltage measurements.

Absolute Maximum Ratings

Table 4: Unit Parameter Symbol Value mΑ DC Forward Current at T_{jmax}=100°C^[1] 1200 I_{F} DC Forward Current at T_{imax}=125°C^[1] mΑ I_{F} 1000 Peak Pulsed Forward Current^[2] 1500 mΑ I_{FP} V_R V **Reverse Voltage** See Note 3 -40 ~ +125 °C Storage Temperature T_{stg} °C Junction Temperature Тı 125 Soldering Temperature^[4] °C 260 $\mathsf{T}_{\mathsf{sol}}$ Allowable Reflow Cycles 6 121°C at 2 ATM, Autoclave Conditions^[5] 100% RH for 168 hours > 8,000 V HBM ESD Sensitivity^[6] Class 3B JESD22-A114-D

Notes for Table 4:

1. Maximum DC forward current is determined by the overall thermal resistance and ambient temperature. Follow the curves in Figure 10 for current derating.

2: Pulse forward current conditions: Pulse Width ≤ 10msec and Duty Cycle ≤ 10%.

3. LEDs are not designed to be reverse biased.

4. Solder conditions per JEDEC 020D. See Reflow Soldering Profile Figure 3.

5. Autoclave Conditions per JEDEC JESD22-A102-C.

6. LED Engin recommends taking reasonable precautions towards possible ESD damages and handling the LZ1-00R100

in an electrostatic protected area (EPA). An EPA may be adequately protected by ESD controls as outlined in ANSI/ESD S6.1.

Optical Characteristics @ T_c = 25°C

Parameter	Symbol	Typical	Unit
Luminous Flux (@ I _F = 1000mA)	Φ _v	160	Im
Dominant Wavelength	λ_{D}	623	nm
Viewing Angle ^[1]	2O _{1/2}	76	Degrees
Total Included Angle ^[2]	Θ _{0.9}	115	Degrees

Notes for Table 5:

1. Viewing Angle is the off axis angle from emitter centerline where the luminous intensity is ½ of the peak value.

2. Total Included Angle is the total angle that includes 90% of the total luminous flux.

Electrical Characteristics @ T_c = 25°C

	Table 6:			
Parameter	Symbol	Typical	Unit	
Forward Voltage (@ I _F = 1000mA)	V _F	2.6	V	
Forward Voltage (@ I _F = 1200mA)	V _F	2.7	V	
Temperature Coefficient of Forward Voltage	$\Delta V_F / \Delta T_J$	-1.9	mV/°C	
Thermal Resistance (Junction to Case)	RΘ _{J-C}	10.5	°C/W

IPC/JEDEC Moisture Sensitivity Level

	Soak Requirements				uirements	
	Floo	r Life	Stan	dard	Accel	erated
Level	Time	Conditions	Time (hrs)	Conditions	Time (hrs)	Conditions
1	Unlimited	≤ 30°C/ 85% RH	168 +5/-0	85°C/ 85% RH	n/a	n/a

Table 7 - IPC/JEDEC J-STD-20D.1 MSL Classification:

Notes for Table 7:

1. The standard soak time includes a default value of 24 hours for semiconductor manufacturer's exposure time (MET) between bake and bag and includes the maximum time allowed out of the bag at the distributor's facility.

Average Lumen Maintenance Projections

Lumen maintenance generally describes the ability of a lamp to retain its output over time. The useful lifetime for solid state lighting devices (Power LEDs) is also defined as Lumen Maintenance, with the percentage of the original light output remaining at a defined time period.

Based on long-term WHTOL testing, LED Engin projects that the LZ Series will deliver, on average, 70% Lumen Maintenance at 65,000 hours of operation at a forward current of

1000 mA. This projection is based on constant current operation with junction temperature maintained at or below 110°C.

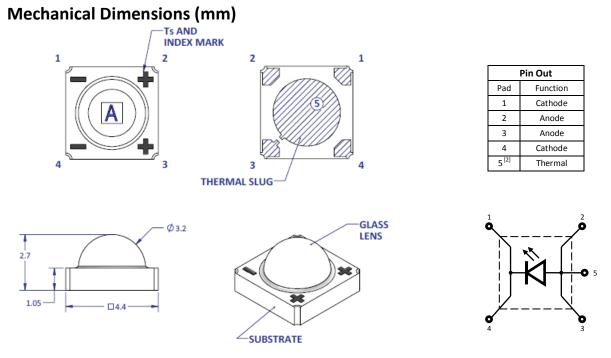

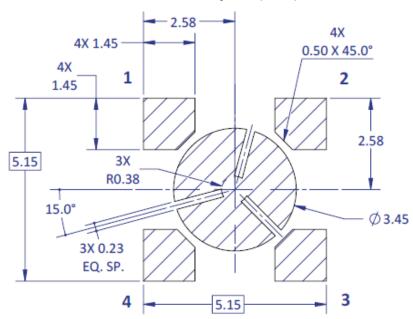

Figure 1: Package outline drawing.

Notes for Figure 1:

- 1. Unless otherwise noted, the tolerance = \pm 0.20 mm.
- Thermal contact, Pad 5, is electrically connected to the Anode, Pads 2 and 3. Do not electrically connect any electrical pads to the thermal contact, Pad 5. LED Engin recommends mounting the LZ1-00R100 to a MCPCB that provides insulation between all electrical pads and the thermal contact, Pad 5. LED Engin offers LZ1-10R100 and LZ1-30R100 MCPCB options which provide both electrical and thermal contact insulation with low thermal resistance. Please refer to Application Note MCPCB Options 1 and 3, or contact a LED Engin sales representative for more information.

Recommended Solder Pad Layout (mm)

LZ1 MCPCB Family

Part number	Type of MCPCB	Diameter (mm)	Emitter + MCPCB Thermal Resistance (°C/W)	Typical V _f (V)	Typical I _f (mA)
LZ1-1xxxxx	1-channel Star	19.9	10.5 + 1.5 = 12.0	2.6	1000
LZ1-3xxxxx	1-channel Mini	11.5	10.5 + 2.0 = 12.5	2.6	1000

Mechanical Mounting of MCPCB

- MCPCB bending should be avoided as it will cause mechanical stress on the emitter, which could lead to substrate cracking and subsequently LED dies cracking.
- To avoid MCPCB bending:
 - Special attention needs to be paid to the flatness of the heat sink surface and the torque on the screws.
 - Care must be taken when securing the board to the heat sink. This can be done by tightening three M3 screws (or #4-40) in steps and not all the way through at once. Using fewer than three screws will increase the likelihood of board bending.
 - It is recommended to always use plastics washers in combinations with the three screws.
 - If non-taped holes are used with self-tapping screws, it is advised to back out the screws slightly after tightening (with controlled torque) and then re-tighten the screws again.

Thermal interface material

- To properly transfer heat from LED emitter to heat sink, a thermally conductive material is required when mounting the MCPCB on to the heat sink.
- There are several varieties of such material: thermal paste, thermal pads, phase change materials and thermal
 epoxies. An example of such material is Electrolube EHTC.
- It is critical to verify the material's thermal resistance to be sufficient for the selected emitter and its operating conditions.

Wire soldering

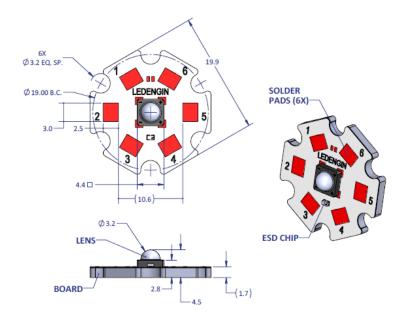

- To ease soldering wire to MCPCB process, it is advised to preheat the MCPCB on a hot plate of 125-150°C.
 Subsequently, apply the solder and additional heat from the solder iron will initiate a good solder reflow. It is recommended to use a solder iron of more than 60W.
- It is advised to use lead-free, no-clean solder. For example: SN-96.5 AG-3.0 CU 0.5 #58/275 from Kester (pn: 24-7068-7601)

Company Information

LED Engin, Inc., based in California's Silicon Valley, specializes in ultra-bright, ultra compact solid state lighting solutions allowing lighting designers & engineers the freedom to create uncompromised yet energy efficient lighting experiences. The LuxiGen[™] Platform — an emitter and lens combination or integrated module solution, delivers superior flexibility in light output, ranging from 3W to 90W, a wide spectrum of available colors, including whites, multi-color and UV, and the ability to deliver upwards of 5,000 high quality lumens to a target. The small size combined with powerful output allows for a previously unobtainable freedom of design wherever high-flux density, directional light is required. LED Engin's packaging technologies lead the industry with products that feature lowest thermal resistance, highest flux density and consummate reliability, enabling compact and efficient solid state lighting solutions.

LED Engin is committed to providing products that conserve natural resources and reduce greenhouse emissions.

LED Engin reserves the right to make changes to improve performance without notice.
