

14-Bit and 16-Bit Parallel Low Glitch Multiplying DACs with 4-Quadrant Resistors

FEATURES

- **True 16-Bit Performance Over Industrial Temperature Range**
- **DNL and INL: 1LSB Max**
- **On-Chip 4-Quadrant Resistors Allow Precise 0V to 10V, 0V to -10V or $\pm 10V$ Outputs**
- **Pin Compatible 14- and 16-Bit Parts**
- **Asynchronous Clear Pin**
 - LTC1591/LTC1597: Reset to Zero Scale
 - LTC1591-1/LTC1597-1: Reset to Mid-Scale
- **Glitch Impulse < 2nV-s**
- **Low Power Consumption: 10 μ W Typ**
- **Power-On Reset**
- **28-Lead SSOP Package**

APPLICATIONS

- Process Control and Industrial Automation
- Direct Digital Waveform Generation
- Software-Controlled Gain Adjustment
- Automatic Test Equipment

DESCRIPTION

The **LTC®1591/LTC1597** are pin compatible, parallel input 14-bit and 16-bit multiplying current output DACs that operate from a single 5V supply. INL and DNL are accurate to 1LSB over the industrial temperature range in both 2- and 4-quadrant multiplying modes. True 16-bit 4-quadrant multiplication is achieved with on-chip 4-quadrant multiplication resistors.

These DACs include an internal deglitcher circuit that reduces the glitch impulse to less than 2nV-s (typ). The asynchronous $\overline{\text{CLR}}$ pin resets the LTC1591/LTC1597 to zero scale and LTC1591-1/LTC1597-1 to mid-scale.

The LTC1591/LTC1597 are available in the 28-pin SSOP package and are specified over the industrial temperature range.

For serial interface 16-bit current output DACs refer to the LTC1595/LTC1596 data sheet.

TYPICAL APPLICATION

16-Bit, 4-Quadrant Multiplying DAC with a Minimum of External Components

LTC1591/LTC1591-1 Integral Nonlinearity

LTC1597/LTC1597-1 Integral Nonlinearity

LTC1591/LTC1597

ABSOLUTE MAXIMUM RATINGS (Note 1)

V_{CC} to AGND	–0.5V to 7V
V_{CC} to DGND	–0.5V to 7V
AGND to DGND	$V_{CC} + 0.5V$
DGND to AGND	$V_{CC} + 0.5V$
REF, R_{OFS} , R_{FB} , R1, R_{COM} to AGND, DGND	$\pm 25V$
Digital Inputs to DGND	–0.5V to ($V_{CC} + 0.5V$)
I_{OUT1} to AGND	–0.5V to ($V_{CC} + 0.5V$)
Maximum Junction Temperature	125°C

Operating Temperature Range	
LTC1591C/LTC1591-1C	
LTC1597C/LTC1597-1C	0°C to 70°C
LTC1591I/LTC1591-1I	
LTC1597I/LTC1597-1I	–40°C to 85°C
Storage Temperature Range	–65°C to 150°C
Lead Temperature (Soldering, 10 sec)	300°C

PIN FUNCTIONS

LTC1591

REF (Pin 1): Reference Input and 4-Quadrant Resistor R2. Typically $\pm 10V$, accepts up to $\pm 25V$. In 2-Quadrant mode this is the reference input. In 4-quadrant mode, this pin is driven by external inverting reference amplifier.

R_{COM} (Pin 2): Center Tap Point of the Two 4-Quadrant Resistors R1 and R2. Normally tied to the inverting input of an external amplifier in 4-quadrant operation, otherwise shorted to the REF pin. See Figures 1a and 2a.

R1 (Pin 3): 4-Quadrant Resistor R1. In 2-quadrant operation short to the REF pin. In 4-quadrant mode tie to R_{OFFS} (Pin 4).

R_{OFFS} (Pin 4): Bipolar Offset Resistor. Typically swings $\pm 10V$, accepts up to $\pm 25V$. In 2-quadrant operation tie to R_{FB}. In 4-quadrant operation tie to R1.

R_{FB} (Pin 5): Feedback Resistor. Normally tied to the output of the current to voltage converter op amp. Swings to $\pm V_{REF}$. V_{REF} is typically $\pm 10V$.

I_{OUT1} (Pin 6): DAC Current Output. Tie to the inverting input of the current to voltage converter op amp.

AGND (Pin 7): Analog Ground. Tie to ground.

LD (Pin 8): DAC Digital Input Load Control Input. When LD is taken to a logic high, data is loaded from the input register into the DAC register, updating the DAC output.

WR (Pin 9): DAC Digital Write Control Input. When \overline{WR} is taken to a logic low, data is loaded from the digital input pins into the 14-bit wide input register.

DB13 to D2 (Pins 10 to 21): Digital Input Data Bits.

DGND (Pin 22): Digital Ground. Tie to ground.

V_{CC} (Pin 23): The Positive Supply Input. $4.5V \leq V_{CC} \leq 5.5V$. Requires a bypass capacitor to ground.

DB1, DB0 (Pins 24, 25): Digital Input Data Bits.

NC (Pins 26, 27): No Connect.

CLR (Pin 28): Digital Clear Control Function for the DAC. When \overline{CLR} is taken to a logic low, it sets the DAC output and all internal registers to zero code for the LTC1591 and mid-scale code for the LTC1591-1.

PIN FUNCTIONS

LTC1597

REF (Pin 1): Reference Input and 4-Quadrant Resistor R2. Typically $\pm 10V$, accepts up to $\pm 25V$. In 2-Quadrant mode this is the reference input. In 4-quadrant mode, this pin is driven by external inverting reference amplifier.

R_{COM} (Pin 2): Center Tap Point of the Two 4-Quadrant Resistors R1 and R2. Normally tied to the inverting input of an external amplifier in 4-quadrant operation, otherwise shorted to the REF pin. See Figures 1b and 2b.

R1 (Pin 3): 4-Quadrant Resistor R1. In 2-quadrant operation short to the REF pin. In 4-quadrant mode tie to R_{OFFS} (Pin 4).

R_{OFFS} (Pin 4): Bipolar Offset Resistor. Typically swings $\pm 10V$, accepts up to $\pm 25V$. In 2-quadrant operation tie to R_{FB}. In 4-quadrant operation tie to R1.

R_{FB} (Pin 5): Feedback Resistor. Normally tied to the output of the current to voltage converter op amp. Swings to $\pm V_{REF}$. V_{REF} is typically $\pm 10V$.

I_{OUT1} (Pin 6): DAC Current Output. Tie to the inverting input of the current to voltage converter op amp.

AGND (Pin 7): Analog Ground. Tie to ground.

LD (Pin 8): DAC Digital Input Load Control Input. When LD is taken to a logic high, data is loaded from the input register into the DAC register, updating the DAC output.

WR (Pin 9): DAC Digital Write Control Input. When \overline{WR} is taken to a logic low, data is loaded from the digital input pins into the 16-bit wide input register.

DB15 to D4 (Pins 10 to 21): Digital Input Data Bits.

DGND (Pin 22): Digital Ground. Tie to ground.

V_{CC} (Pin 23): The Positive Supply Input. $4.5V \leq V_{CC} \leq 5.5V$. Requires a bypass capacitor to ground.

DB3 to DB0 (Pins 24 to 27): Digital Input Data Bits.

CLR (Pin 28): Digital Clear Control Function for the DAC. When \overline{CLR} is taken to a logic low, it sets the DAC output and all internal registers to zero code for the LTC1597 and mid-scale code for the LTC1597-1.

APPLICATIONS INFORMATION

Description

The LTC1591/LTC1597 are 14-/16-bit multiplying, current output DACs with a full parallel 14-/16-bit digital interface. The devices operate from a single 5V supply and provide both unipolar 0V to -10V or 0V to 10V and bipolar $\pm 10\text{V}$ output ranges from a 10V or -10V reference input. They have three additional precision resistors on chip for bipolar operation. Refer to the block diagrams regarding the following description.

The 14-/16-bit DACs consist of a precision R-2R ladder for the 11/13LSBs. The 3MSBs are decoded into seven segments of resistor value R. Each of these segments and the R-2R ladder carries an equally weighted current of one eighth of full scale. The feedback resistor R_{FB} and 4-quadrant resistor R_{OFS} have a value of $R/4$. 4-quadrant resistors $R1$ and $R2$ have a magnitude of $R/4$. $R1$ and $R2$ together with an external op amp (see Figure 2) invert the reference input voltage and applies it to the 14-/16-bit DAC input REF, in 4-quadrant operation. The REF pin presents a constant input impedance of $R/8$ in unipolar mode and $R/12$ in bipolar mode. The output impedance of the current output pin I_{OUT1} varies with DAC input code. The I_{OUT1} capacitance due to the NMOS current steering switches also varies with input code from 70pF to 115pF. An added feature of these devices, especially for waveform generation, is a proprietary deglitcher that reduces glitch energy to below 2nV-s over the DAC output voltage range.

Digital Section

The LTC1591/LTC1597 are 14-/16-bit wide full parallel data bus inputs. The devices are double-buffered with two 14-/16-bit registers. The double-buffered feature permits the update of several DACs simultaneously. The input register is loaded directly from a 16-bit microprocessor bus when the \overline{WR} pin is brought to a logic low level. The second register (DAC register) is updated with the data from the input register when the LD pin is brought to a logic high level. Updating the DAC register updates the DAC output with the new data. To make both registers transparent for flowthrough mode, tie \overline{WR} low and LD high. However, this defeats the deglitcher operation and output glitch impulse may increase. The deglitcher is activated on the rising edge of the LD pin. The versatility of the interface also allows the use of the input and DAC registers in a master slave or edge-triggered configuration. This mode of operation occurs when \overline{WR} and LD are tied together. The asynchronous clear pin resets the LTC1591/LTC1597 to zero scale and the LTC1591-1/LTC1597-1 to mid-scale. \overline{CLR} resets both the input and DAC registers. These devices also have a power-on reset. Table 1 shows the truth table for the LTC1591/LT1597.

Unipolar Mode

(2-Quadrant Multiplying, $V_{OUT} = 0V$ to $-V_{REF}$)

The LTC1591/LTC1597 can be used with a single op amp to provide 2-quadrant multiplying operation as shown in Figure 1. With a fixed -10V reference, the circuits shown give a precision unipolar 0V to 10V output swing.

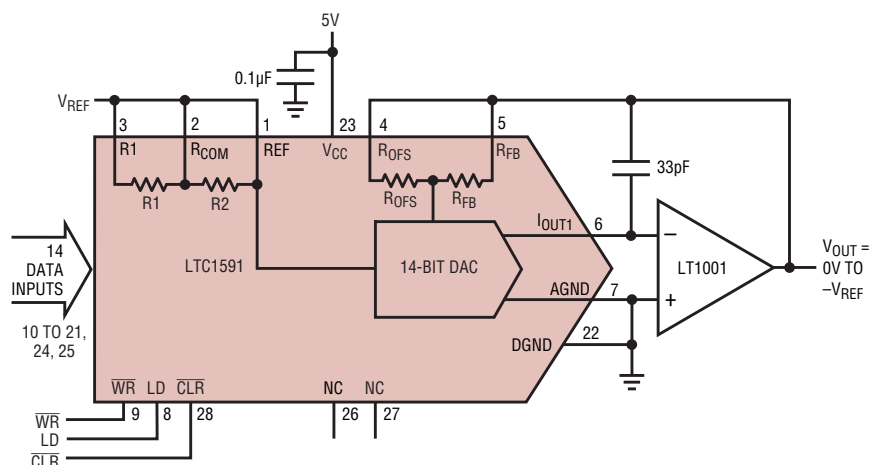

Figure 1a. Unipolar Operation (2-Quadrant Multiplication) $V_{OUT} = 0V$ to $-V_{REF}$

Bipolar Mode

(4-Quadrant Multiplying, $V_{OUT} = -V_{REF}$ to V_{REF})

The LTC1591/LTC1597 contain on chip all the 4-quadrant resistors necessary for bipolar operation. 4-quadrant multiplying operation can be achieved with a minimum of external components, a capacitor and a dual op amp, as shown in Figure 2. With a fixed 10V reference, the circuit shown gives a precision bipolar $-10V$ to $10V$ output swing.

Op Amp Selection

Because of the extremely high accuracy of the 14-/16-bit LTC1591/LTC1597, thought should be given to op amp selection in order to achieve the exceptional performance of which the part is capable. Fortunately, the sensitivity of INL and DNL to op amp offset has been greatly reduced compared to previous generations of multiplying DACs.

Op amp offset will contribute mostly to output offset and gain and will have minimal effect on INL and DNL. For the LTC1597, a $500\mu V$ op amp offset will cause about 0.55LSB INL degradation and 0.15LSB DNL degradation with a 10V full-scale range. The main effects of op amp offset will be a degradation of zero-scale error equal to the op amp offset, and a degradation of full-scale error

equal to twice the op amp offset. For the LTC1597, the same $500\mu V$ op amp offset (2mV offset for LTC1591) will cause a 3.3LSB zero-scale error and a 6.5LSB full-scale error with a 10V full-scale range.

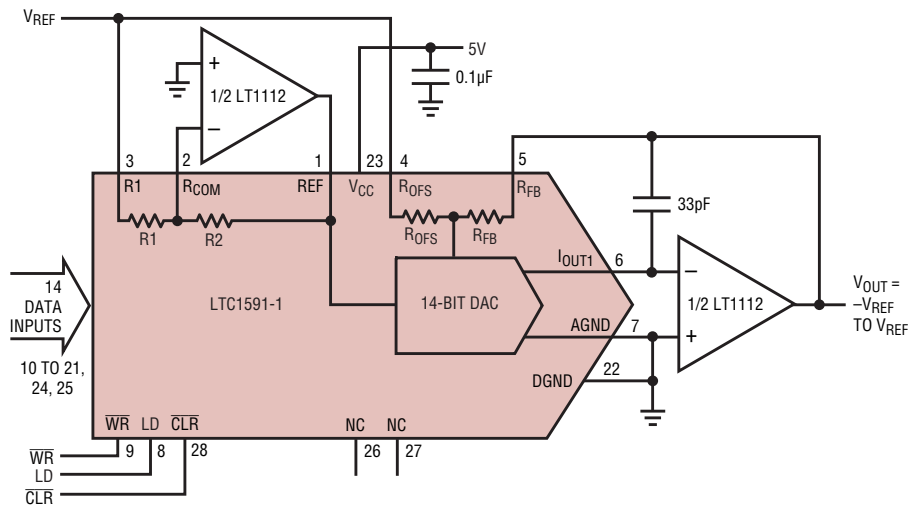

Op amp input bias current (I_{BIAS}) contributes only a zero-scale error equal to $I_{BIAS}(R_{FB}/R_{OFS}) = I_{BIAS}(6k)$. For a thorough discussion of 16-bit DAC settling time and op amp selection, refer to Application Note 74, "Component and Measurement Advances Ensure 16-Bit DAC Settling Time."

Reference Input and Grounding

For optimum performance the reference input of the LTC1597 should be driven by a source impedance of less than $1k\Omega$. However, these DACs have been designed to minimize source impedance effects. An $8k\Omega$ source impedance degrades both INL and DNL by 0.2LSB.

As with any high resolution converter, clean grounding is important. A low impedance analog ground plane and star grounding should be used. AGND must be tied to the star ground with as low a resistance as possible.

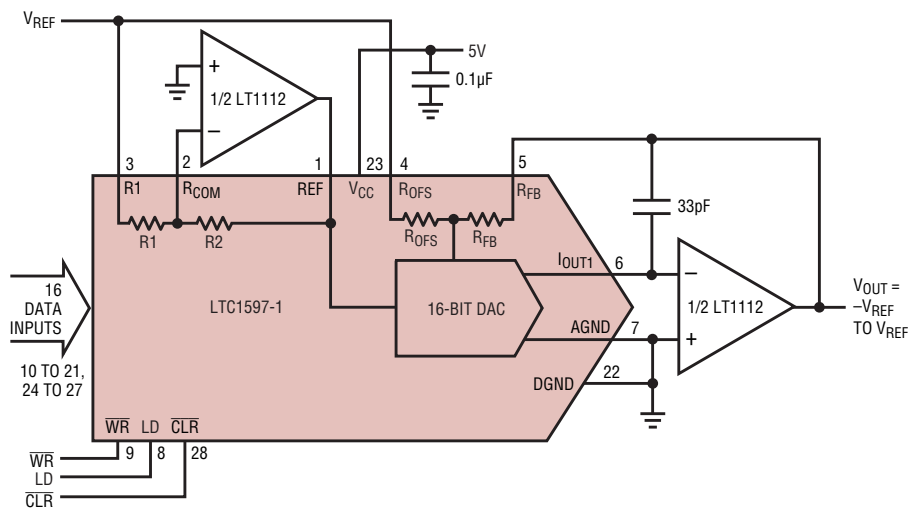

APPLICATIONS INFORMATION

Bipolar Offset Binary Code Table

DIGITAL INPUT BINARY NUMBER IN DAC REGISTER				ANALOG OUTPUT V_{OUT}
MSB		LSB		
1111	1111	1111	11	V_{REF} (8,191/8,192)

TYPICAL APPLICATIONS

Noninverting Unipolar Operation (2-Quadrant Multiplication) $V_{OUT} = 0V$ to V_{REF}

TYPICAL APPLICATIONS

16-Bit V_{OUT} DAC Programmable Unipolar/Bipolar Configuration

TYPICAL APPLICATIONS

Digital Waveform Generator

PACKAGE DESCRIPTION

Dimensions in inches (millimeters) unless otherwise noted.
Please refer to <http://www.linear.com/designtools/packaging/> for the most recent package drawings.

G Package 28-Lead Plastic SSOP (0.209) (LTC DWG # 05-08-1640)

PACKAGE DESCRIPTION

Dimensions in inches (millimeters) unless otherwise noted.

Please refer to <http://www.linear.com/designtools/packaging/> for the most recent package drawings.

N Package 28-Lead Plastic PDIP (Narrow 0.300 Inch) (LTC DWG # 05-08-1510 Rev I)

NOTE:
1. DIMENSIONS ARE $\frac{\text{INCHES}}{\text{MILLIMETERS}}$

*THESE DIMENSIONS DO NOT INCLUDE MOLD FLASH OR PROTRUSIONS.
MOLD FLASH OR PROTRUSIONS SHALL NOT EXCEED .010 INCH (0.254mm)

OBSOLETE PACKAGE

REVISION HISTORY (Revision history begins at Rev B)

REV	DATE	DESCRIPTION	PAGE NUMBER
B	07/15	Obsoleted 28-Lead PDIP Package	2, 3, 22

TYPICAL APPLICATION

17-Bit Sign Magnitude DAC with Bipolar Zero Error of 140μV (0.92LSB at 17 Bits) at 25°C
