

Ultralow Noise Microphone with Bottom Port and Analog Output

Data Sheet

FEATURES

Tiny, 3.35 mm × 2.50 mm × 0.88 mm surface-mount package Omnidirectional response Very high SNR of 65 dBA Sensitivity of –38 dBV Extended frequency response from 100 Hz to 20 kHz Low current consumption: 180 μA Single-ended analog output 120 dB maximum SPL High PSR of 70 dBV Compatible with Sn/Pb and Pb-free solder processes RoHS/WEEE compliant

APPLICATIONS

Smartphones and feature phones Tablet computers Teleconferencing systems Digital still and video cameras Bluetooth headsets Notebook PCs Security and surveillance

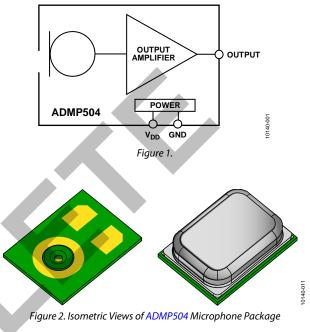

GENERAL DESCRIPTION

The ADMP504¹ is a high performance, very low noise, low power, analog output, bottom-ported omnidirectional MEMS microphone. The ADMP504 consists of a MEMS microphone element, an impedance converter and an output amplifier. The ADMP504 sensitivity specification makes it an excellent choice for both near field and far field applications. The ADMP504 is function- and pin-compatible with the ADMP404 microphone, providing an easy upgrade path.

The ADMP504 has very high SNR and extended wideband frequency response, resulting in natural sound with high

FUNCTIONAL BLOCK DIAGRAM

ADMP504

intelligibility. Low current consumption enables long battery life for portable applications. The ADMP504 complies with the TIA-920 Telecommunications Telephone Terminal Equipment Transmission Requirements for Wideband Digital Wireline Telephones standard.

The ADMP504 is available in an ultraminiature 3.35 mm \times 2.5 mm \times 0.88 mm surface-mount package. It is reflow solder compatible with no sensitivity degradation. The ADMP504 is halide free.

¹ Protected by U.S. Patents 7,449,356; 7,825,484; 7,885,423; 7,961,897. Other patents are pending.

SPECIFICATIONS

 $T_A = 25^{\circ}$ C, $V_{DD} = 1.8$ V, unless otherwise noted. All minimum and maximum specifications are guaranteed. Typical specifications are not guaranteed.

Parameter	Symbol	Test Conditions/Comments	Min	Тур	Max	Unit
PERFORMANCE						
Directionality				Omni		
Sensitivity		1 kHz, 94 dB SPL	-41	-38	-35	dBV
Signal-to-Noise Ratio	SNR	20 Hz to 20 kHz, A-weighted		65		dBA
Equivalent Input Noise	EIN	20 Hz to 20 kHz, A-weighted		29		dBA SPL
Dynamic Range		Derived from EIN and maximum acoustic input		91		dB
Frequency Response ¹		Low frequency –3 dB point		100		Hz
		High frequency –3 dB point		>20		kHz
Total Harmonic Distortion	THD	104 dB SPL			3	%
Power Supply Rejection	PSR	217 Hz, 100 mV p-p square wave superimposed on $V_{DD} = 1.8 V$		-70		dBV
Maximum Acoustic Input		Peak, 10% THD		120		dB SPL
POWER SUPPLY						
Supply Voltage	V _{DD}		1.6		3.3	V
Supply Current	ls	V _{DD} = 1.8 V		180	200	μA
		V _{DD} = 3.3 V		200	225	μΑ
OUTPUT CHARACTERISTICS						
Output Impedance	Zout			200		Ω
Output DC Offset				0.8		V
Output Current Limit				90		μA
Maximum Output Voltage		120 dB SPL input, peak		0.25		V
Noise Floor		20 Hz to 20 kHz, A-weighted, rms		-103		dBV

ABSOLUTE MAXIMUM RATINGS

Table 2.

	-
Parameter	Rating
Supply Voltage	–0.3 V to +3.6 V
Sound Pressure Level (SPL)	160 dB
Mechanical Shock	10,000 <i>g</i>
Vibration	Per MIL-STD-883 Method 2007,
	Test Condition B
Temperature Range	–40°C to +85°C

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

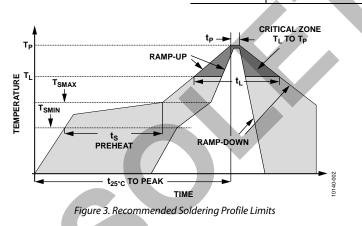

Table 3. Recommended Soldering Profile Limits

Profile Feature	Sn63/Pb37	Pb-Free
Average Ramp Rate $(T_L \text{ to } T_P)$	1.25°C/sec maximum	1.25°C/sec maximum
Preheat		
Minimum Temperature (T _{SMIN})	100°C	150°C
Maximum Temperature (T _{SMAX})	150°C	200°C
Time (T _{SMIN} to T _{SMAX}), ts	60 sec to 75 sec	60 sec to 75 sec
Ramp-Up Rate (T _{SMAX} to T _L)	1.25°C/sec	1.25°C/sec
Time Maintained Above Liquidous (t _L)	45 sec to 75 sec	~50 sec
Liquidous Temperature (T _L)	183℃	217°C
Peak Temperature (T _P)	215°C + 3°C/–3°C	260°C + 0°C/-5°C
Time Within 5°C of Actual Peak Temperature (t _P)	20 sec to 30 sec	20 sec to 30 sec
Ramp-Down Rate	3°C/sec maximum	3°C/sec maximum
Time 25°C to Peak Temperature	5 minutes maximum	5 minutes maximum

TYPICAL PERFORMANCE CHARACTERISTICS

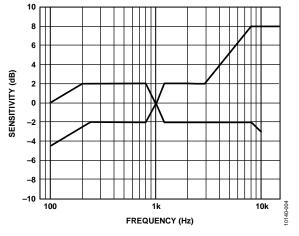

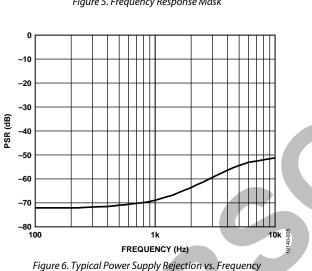

Figure 5. Frequency Response Mask

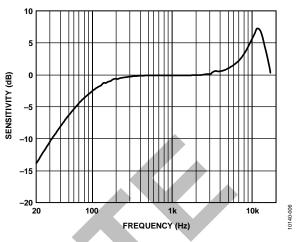

Figure 7. Typical Frequency Response (Measured)

APPLICATIONS INFORMATION

The ADMP504 output can be connected to a dedicated codec microphone input (see Figure 8) or to a high input impedance gain stage (see Figure 9). A 0.1 μ F ceramic capacitor placed close to the ADMP504 supply pin is used for testing and is recommended to adequately decouple the microphone from noise on the power supply. A dc-blocking capacitor is required at the output of the microphone. This capacitor creates a high-pass filter with a corner frequency at

 $f_C = 1/(2\pi \times C \times R)$

where *R* is the codec's input impedance.

A minimum value of 2.2 μ F is recommended in Figure 8 because the input impedance of the ADAU1361/ADAU1761 can be as low as 2 k Ω at its highest PGA gain setting, which would result in a high-pass filter corner frequency at about 37 Hz.

Figure 9 shows the ADMP504 connected to an ADA4897-1 op amp configured as a noninverting preamplifier.

HANDLING INSTRUCTIONS

PICK-AND-PLACE EQUIPMENT

The MEMS microphone can be handled using standard pickand-place and chip shooting equipment. Take care to avoid damage to the MEMS microphone structure as follows:

- Use a standard pickup tool to handle the microphone. Because the microphone hole is on the bottom of the package, the pickup tool can make contact with any part of the lid surface.
- Use care during pick-and-place to ensure that no high shock events above 10 kg are experienced because this may cause damage to the microphone.
- Do not pick up the microphone with a vacuum tool that makes contact with the bottom side of the microphone. Do not pull air out or blow air into the microphone port.
- Do not use excessive force to place the microphone on the PCB.

REFLOW SOLDER

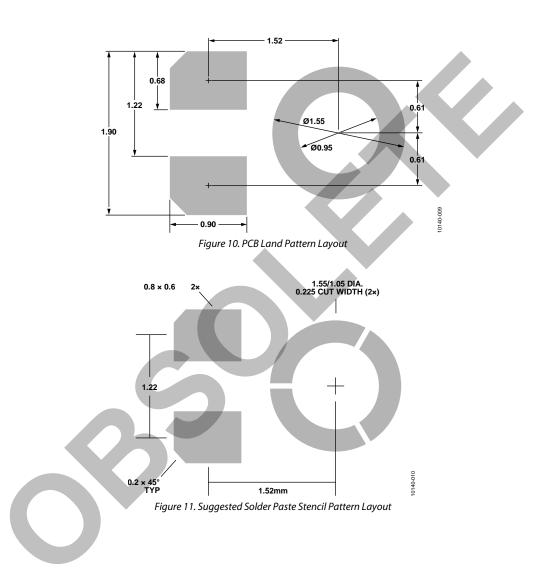

For best results, the soldering profile should be in accordance with the recommendations of the manufacturer of the solder paste used to attach the MEMS microphone to the PCB. It is recommended that the solder reflow profile not exceed the limit conditions specified in Figure 3 and Table 3.

BOARD WASH

When washing the PCB, ensure that water does not make contact with the microphone port. Blow-off procedures and ultrasonic cleaning must not be used.

PCB LAND PATTERN LAYOUT

The recommended PCB land pattern for the ADMP504 should be laid out to a 1:1 ratio to the solder pads on the microphone package, as shown in Figure 10. Take care to avoid applying solder paste to the sound hole in the PCB. A suggested solder paste stencil pattern layout is shown in Figure 11. The diameter of the sound hole in the PCB should be larger than the diameter of the sound port of the microphone. A minimum diameter of 0.5 mm is recommended.

RELIABILITY SPECIFICATIONS

The microphone sensitivity after stress must deviate by no more than 3 dB from the initial value.

Stress Test	Description
Low Temperature Operating Life	–40°C, 1000 hrs, powered
High Temperature Operating Life	+125°C, 1000 hrs, powered
Temperature Humidity Bias (THB)	+85°C/+85% relative humidity (RH), 1000 hrs, powered
Temperature Cycle	-40°C/+125°C, one cycle per hour, 1000 cycles
High Temperature Storage	+150°C, 1000 hrs
Low Temperature Storage	–40°C, 1000 hrs
Component CDM ESD	All pins, 0.5 kV
Component HBM ESD	All pins, 1.5 kV
Component MM ESD	All pins, 0.2 kV
