

## FEATURES

**Stable over time and temperature**

**0.5% initial error accuracy**

**1% accuracy error over the full temperature range**

**Compatible with Type II or Type III compensation networks**

**Reference output voltage: 1.225 V**

**Compatible with Distributed-power Open Standards Alliance (DOSA)**

**Low power operation: <7 mA total**

**Wide voltage supply range: 3.0 V to 20 V ( $V_{DD1}$  and  $V_{DD2}$ )**

**Output -3 dB bandwidth: 400 kHz typical**

**Isolation voltage: 5000 V rms reinforced**

**Safety and regulatory approvals**

**UL recognition: 5000 V rms for 1 minute per UL 1577**

**CSA Component Acceptance Notice 5A**

**VDE certificate of conformity**

**DIN V VDE V 0884-10 (VDE V 0884-10):2006-12**

**$V_{IORM} = 849$  V peak**

## ENHANCED FEATURES

**Supports defense and aerospace applications (AQEC standard)**

**Military temperature range (-55°C to +125°C)**

**Controlled manufacturing baseline**

**One assembly/test site**

**One fabrication site**

**Enhanced product change notification**

**Qualification data available on request**

## APPLICATIONS

**Linear feedback power supplies**

**Inverters**

**Uninterruptible power supplies (UPS)**

**DOSA-compatible modules**

**Voltage monitors**

## GENERAL DESCRIPTION

The ADuM4190-EP<sup>1</sup> is an isolated error amplifier based on Analog Devices, Inc., iCoupler® technology. The ADuM4190-EP is ideal for linear feedback power supplies. The primary side controllers of the ADuM4190-EP enable improvements in transient response, power density, and stability as compared to commonly used optocoupler and shunt regulator solutions.

Unlike optocoupler-based solutions, which have an uncertain current transfer ratio over lifetime and at high temperatures, the ADuM4190-EP transfer function does not change over its lifetime and is stable over a wide temperature range of -55°C to +125°C.

Included in the ADuM4190-EP is a wideband operational amplifier for a variety of commonly used power supply loop compensation techniques. The ADuM4190-EP is fast enough to allow a feedback loop to react to fast transient conditions and overcurrent conditions. Also included is a high accuracy 1.225 V reference to compare with the supply output setpoint.

The ADuM4190-EP is packaged in a wide body, 16-lead SOIC package for a reinforced 5000 V rms isolation voltage rating.

Additional application and technical information can be found in the ADuM4190 data sheet.

<sup>2</sup> Refers to common-mode transients across the insulation barrier. Common-mode transients exceeding the absolute maximum ratings may cause latch-up or permanent damage.

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

### ESD CAUTION

**ESD (electrostatic discharge) sensitive device.** Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

## PIN CONFIGURATION AND FUNCTION DESCRIPTIONS
