

#### **General Description**

The MAX14979E is optimized for high-speed differential switching applications. The device is ideal for low-voltage differential signal (LVDS) and low-voltage positive emitter-coupled logic (LVPECL) switching applications. The MAX14979E provides enhanced electrostatic discharge (ESD) protection up to ±15kV and excellent highfrequency response, making this device especially useful for interfaces that must go to an outside connection.

The MAX14979E provides extremely low capacitance (CON) as well as low resistance (RON) for low-insertion loss and bandwidth up to 650MHz (1.3Gbps). In addition to the four pairs of double-pole/double-throw (DPDT) switches, the MAX14979E provides low-frequency (up to 50MHz) and AUX switching that can be used for LED lighting or other applications.

The MAX14979E is available in a space-saving 36-pin TQFN package and operates over the standard -40°C to +85°C temperature range.

#### **Features**

- ◆ ±15kV ESD Protected per MIL-STD-883, Method 3015
- ♦ Single +3.0V to +3.6V Power-Supply Voltage
- Low On-Resistance (RoN):  $4\Omega$  (typ),  $6.5\Omega$  (max)
- ◆ Low On-Capacitance (Con): 8pF (typ)
- → -23dB Return Loss (100MHz)
- → -3dB Bandwidth: 650MHz
- Built-In AUX Switches for Switching Indicators
- ♦ Low 450µA (max) Quiescent Current
- ♦ Bidirectional 8 to 16 Multiplexer/Demultiplexer
- ◆ Space-Saving, Lead-Free, 36-Pin, 6mm x 6mm **TQFN Package**

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

### **Detailed Description**

The MAX14979E is a high-speed analog switch targeted at LVDS and other low-voltage switching up to 600MHz. In a typical application, the MAX14979E switches two sets of LVDS sources to a laptop LVDS panel. For extra security, the MAX14979E is protected against ±15kV ESD shocks. See the *Functional Diagram*.

With its low resistance and capacitance, as well as high-ESD protection, the MAX14979E can be used to switch most low-voltage differential signals, such as LVDS and LVPECL, as long as the signals do not exceed the maximum ratings of the device.

The MAX14979E switches provide low capacitance and on-resistance to meet low insertion loss and return-loss specifications. The MAX14979E has three additional AUX switches.

#### **Digital Control Inputs**

The MAX14979E provides a single digital control SEL. SEL controls the switches as well as the AUX switches, as shown in Table 1.

#### **Analog-Signal Levels**

The on-resistance of the MAX14979E is very low and stable as the analog input signals are swept from ground to V+ (see the *Typical Operating Characteristics*). The

switches are bidirectional, allowing COM\_  $\_$  and NC\_  $\_/$  NO\_  $\_$  to be configured as either inputs or outputs.

#### **ESD Protection**

The MAX14979E is characterized using the HBM for  $\pm 15 \text{kV}$  of ESD protection. Figure 5 shows the HBM. This model consists of a 100pF capacitor charged to the ESD voltage of interest, which is then discharged into the test device through a  $1.5 \text{k}\Omega$  resistor. All signal and control pins are ESD protected to  $\pm 15 \text{kV}$  HBM.

#### Power-Supply Sequencing and Overvoltage Protection

**Caution:** Do not exceed the absolute maximum ratings. Stresses beyond the listed ratings may cause permanent damage to the device.

Proper power-supply sequencing is recommended for all CMOS devices. Always apply V+ before applying analog signals, especially if the analog signal is not current limited.

#### Layout

High-speed switches require proper layout and design procedures for optimum performance. Keep design-controlled-impedance PCB traces as short as possible. Ensure that bypass capacitors are as close as possible to the device. Use large ground planes where possible.
