

## MAX77960B/MAX77961B Evaluation Kit

Evaluates: MAX77960B/MAX77961B

### General Description

The MAX77960B/MAX77961B evaluation kit (EV kit) is a fully assembled and tested surface-mount printed circuit board (PCB) that evaluates the MAX77960B/MAX77961B, 3A/6A USB Type-C® buck-boost chargers.

The MAX77960B/MAX77961B EV kit includes the IC evaluation board with integrated I<sup>2</sup>C communication interface and USB micro-B cable. Windows®-based graphical user interface (GUI) software is available for use with the EV kit and can be downloaded from Maxim's website at [www.maximintegrated.com/products/MAX77960B](http://www.maximintegrated.com/products/MAX77960B) (under the *Design Resources* tab) and [www.maximintegrated.com/products/MAX77961B](http://www.maximintegrated.com/products/MAX77961B) (under the *Design Resources* tab). Windows 7 or newer is required to use with the EV kit GUI software.

### Features

- Evaluates the MAX77960B/MAX77961B USB Type-C Buck-Boost Chargers with Integrated FETs for 2S/3S Li-Ion Batteries
- Demonstrates 3.5V to 25.4V Input Operating Range
- Demonstrates Charging Up to 3A (MAX77960B)/6A (MAX77961B)
- Demonstrates USB-OTG Functionality
- Demonstrates JEITA Compliance with On-Board Dummy Thermistors
- Assembled and Tested
- I<sup>2</sup>C Serial Interface

[Ordering Information](#) appears at end of data sheet.

## Quick Start

### Required Equipment

- MAX77960B/MAX77961B EV kit
- Adjustable DC power supply
- Battery or simulated battery
  - 2- or 3-cell Li-ion protected battery
  - Simulated battery or preloaded power supply
- Oscilloscope
- Two voltmeters
- Two ammeters
- Lab cables with appropriate current rating
- USB Micro-B cable
- PC with Windows 7 or newer operating system and USB port

## Setup Overview

A typical bench setup for the MAX77960B/MAX77961B EV Kit is shown in [Figure 2](#).

## Procedure

The EV kit is fully assembled and tested. Follow the steps below to install the EV kit software, make required hardware connections, and start operation of the kit. The EV kit software can be run without hardware attached. Note that after communication is established the IC must still be configured correctly for desired operation mode. Make sure the PC is connected to the internet throughout the process so that the USB driver can be automatically installed.

**Note:** Do not turn on the DC power supply until all connections are made.

- 1) Visit [www.maximintegrated.com/products/MAX77960B](http://www.maximintegrated.com/products/MAX77960B) or [www.maximintegrated.com/products/MAX77961B](http://www.maximintegrated.com/products/MAX77961B) under the *Design Resources* tab to download the latest version of the MAX77960/MAX77961 EV kit GUI software. Save the software to a temporary folder and unpack the zip file.
- 2) Install the EV kit software on your computer by running the MAX77960\_MAX77961GUISetupX.X.X.exe program inside the temporary folder. The program files are copied, and icons are created in the Windows **Start** menu. The software requires the .NET Framework 4.5 or later. If you are connected to the Internet, Windows automatically updates the .NET framework as needed.

Figure 2. EV Kit Simple Block Diagram

## MAX77960B/MAX77961B Evaluation Kit

Evaluates: MAX77960B/MAX77961B

- 3) The EV kit software launches automatically after installation, or alternatively, it can be launched by clicking on the icon in the Windows **Start** menu.
- 4) Make jumper connections based on the Default Position column in [Table 1](#). Change it later when evaluating more features. If evaluation is with a 3-cell Li-ion battery or equivalent simulated battery (for MAX77960BEVKIT06# and MAX77961BEVKIT06# only), place J8 in 2-3 position so that the MAX77960B/MAX77961B are configured for 3-cell.
- 5) Use the USB cable provided with the EV kit to connect the EV kit to the PC's USB port.
- 6) Connect a 2- or 3-cell Li-ion battery or simulated battery to the connectors labeled BATTP and BATTN.
- 7) Connect a DC power supply to the connectors labeled DCIN and GND.
- 8) Launch the MAX77960/MAX77961 GUI software.
- 9) Select **Device** > **Connect** from the window options to connect to the EV kit.

| J13           | THM            | 2-3              | 1-2: Connects THM to potentiometer R39. Adjust resistance of R39 to emulate resistance change of a 10kΩ thermistor at different temperature.<br>2-3: Connects THM to a fixed 10kΩ resistor. This emulates resistance of a 10kΩ thermistor at 25°C. |

## Detailed Description of Software

The MAX77960/MAX77961 GUI software provides an easy-to-use interface to control the function blocks of the IC.

### Software Installation

Double-click the **MAX77960\_MAX77961GUISetup-X.X.X.exe** icon to begin the installation process. Follow the prompts to complete the installation. The evaluation software can be uninstalled in the **Add/Remove Programs** tool in the **Control Panel**. After the installation is complete, open the **Maxim Integrated/MAX77960\_MAX77961** folder and run **MAX77960\_MAX77961.exe** or select it from the program menu. **Figure 3** shows a splash screen containing information about the evaluation kit that appears while the program is loading.

### Establish Communication

Power up the MAX77960B/MAX77961B by connecting a 2- or 3-cell Li-ion battery or simulated battery at BATTp/ BATTn. Open the GUI software and select **Device > Connect**. A window should pop up showing that a slave address 0xD2 has been found. If not, check the USB connection and power. Choose **Read and Close** and the status bar displays “Connected” to signify active communication. An example of a successful connection is shown in **Figure 4**.

*Figure 3. EV Kit Splash Screen*

# MAX77960B/MAX77961B Evaluation Kit

Evaluates: MAX77960B/MAX77961B

## Main Display

Status bits and programmable functions of the charger can be accessed through the interface tabs in the left column of the window (Figure 5).

Figure 4. MAX77960B/MAX77961B Communication Window

Figure 5. MAX77960B/MAX77961B Top-Level Registers

## Register Write Access

Modification of the charger registers are locked by default to prevent arbitrary changes. Therefore, changes made to the charger registers in the locked state are not applied to the EV kit. To unlock register writing, select the **0x3 = Unlocked** option in the **Charger Settings Protection** dropdown menu from the **Charger Configurations 6** register in the **Configuration 4-7** tab, and then click **Write** (Figure 6). Read the register and the **Charger Settings Protection** setting should remain in the **0x3 = Unlocked** state to signify open register access.

From this point onwards, modifications written to any of the registers apply to the EV kit. For example, the **CHGIN Input Current Limit** can be changed in the **Charger Configurations 8** register by selecting the required value and clicking **Write** (Figure 7), but only after the registers have been unlocked.

## Detailed Description of Hardware

### Battery Charger Test Setup

- 1) Connect a 2- or 3-cell Li-Ion battery or simulated battery between BATTP and BATTN.
- 2) Adjust voltage and current limits of the DC power supply to 5.0V and 3.0A. Output of the power supply is off.
- 3) Connect the power supply between DCIN and GND on the EV kit board.
- 4) Open the EV kit GUI and connect to the EV kit.
- 5) In the **Configuration 4-7** tab, set **Charger Settings Protection** in the **Charger Configurations 6** register to **0x3 = Unlocked**. Click **Write** to send the command to the charger.

Figure 6. Charger Register Write Access

- 6) Program the appropriate charger settings for your system. In the **Configuration 8-10** tab, set **CHGIN Input Current Limit** in the **Charger Configurations 8** register. Press **Write** to send the command to the charger. Note that the maximum setting of **CHGIN Input Current Limit** for the MAX77960B is **0x40 = 3150mA**.
- 7) In the **Configuration 0-3** tab, set **Fast Charge Current** in the **Charger Configurations 2** register. Press **Write** to send the command to the charger. Note that the maximum setting of **Fast Charge Current** for the MAX77960B is **0x21 = 3000mA**.
- 8) In the **Charger Configuration 0** register of the **Configuration 0-3** tab, set **Smart Power Selector** to **0x5 = Charger = On**, **OTG = Off**, and **DCDC = On** and click **Write** to enable charger mode.
- 9) Turn on the DC power supply's output to enable charging.
- 10) Use data log equipment to log the charge current and battery voltage profile while charging a 2- or 3-cell Li-ion battery.

Figure 7. Change CHGIN Input Current Limit after Unlocking Charger Settings Protection
