

FEATURES

1.8 V to 5.5 V operation
Ultralow on resistance
 0.4 Ω typical
 0.6 Ω maximum at 5 V supply
Excellent audio performance, ultralow distortion
 0.07 Ω typical
 0.14 Ω maximum R_{ON} flatness
High current carrying capability
 400 mA continuous
 600 mA peak current at 5 V
Automotive temperature range: -40°C to $+125^{\circ}\text{C}$
Rail-to-rail switching operation
Typical power consumption ($<0.1 \mu\text{W}$)

APPLICATIONS

Cellular phones
 PDAs
 MP3 players
 Power routing
 Battery-powered systems
 PCMCIA cards
 Modems
 Audio and video signal routing
 Communication systems
 Data switching

GENERAL DESCRIPTION

The ADG888 is a low voltage, dual DPDT (double-pole, double-throw) CMOS device optimized for high performance audio switching. With its low power and small physical size, it is ideal for portable devices.

This device offers ultralow on resistance of less than 0.8 Ω over the full temperature range, making it an ideal solution for applications requiring minimal distortion through the switch. The ADG888 also has the capability of carrying large amounts of current, typically 400 mA at 5 V operation.

When on, each switch conducts equally well in both directions and has an input signal range that extends to the supplies. The ADG888 exhibits break-before-make switching action.

FUNCTIONAL BLOCK DIAGRAM

Figure 1.

The ADG888 is available in a 16-ball WLCSP, 16-lead LFCSP, and a 16-lead TSSOP. These packages make the ADG888 the ideal solution for space-constrained applications.

PRODUCT HIGHLIGHTS

1. $<0.6 \Omega$ over full temperature range of -40°C to $+125^{\circ}\text{C}$.
2. High current handling capability (400 mA continuous current at 5 V).
3. Low THD + N (0.008% typical).
4. Tiny 16-ball WLCSP, 16-lead LFCSP, and 16-lead TSSOP.

ABSOLUTE MAXIMUM RATINGS

$T_A = 25^\circ\text{C}$, unless otherwise noted.

Table 3.

Parameter	Rating
V_{DD} to GND	–0.3 V to +6 V
Analog Inputs, Digital Inputs ¹	–0.3 V to $V_{DD} + 0.3$ V or 30 mA, whichever occurs first
Peak Current, S or D 5 V operation	600 mA (pulsed at 1 ms, 10% duty cycle max)
Continuous Current, S or D 5 V operation	400 mA
Operating Temperature Range Automotive (Y Version) TSSOP and LFCSP packages Industrial (B version) WLCSP package	–40°C to +125°C
Storage Temperature Range	–40°C to +85°C
Junction Temperature	–65°C to +150°C
16-Lead TSSOP Package θ_{JA} Thermal Impedance (4-Layer Board) θ_{JC} Thermal Impedance	112°C/W 27.6°C/W
16-Lead WLCSP Package θ_{JA} Thermal Impedance (4-Layer Board)	130°C/W
16-Lead LFCSP Package θ_{JA} Thermal Impedance (4-Layer Board)	30.4°C/W
Reflow Soldering (Pb-Free) Peak Temperature Time at Peak Temperature	260(+0/–5)°C 10 sec to 40 sec

¹ Overvoltages at IN, S, or D are clamped by internal diodes. Limit current to the maximum ratings given.

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Only one absolute maximum rating can be applied at any one time.

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

TERMINOLOGY

I_{DD}

Positive supply current.

V_D (V_S)

Analog voltage on Terminal D and Terminal S.

R_{ON}

Ohmic resistance between Terminal D and Terminal S.

R_{FLAT (ON)}

Flatness is defined as the difference between the maximum and minimum value of on resistance as measured.

ΔR_{ON}

On resistance match between any two channels.

I_S (OFF)

Source leakage current with the switch off.

I_D, I_S (ON)

Channel leakage current with the switch on.

V_{INL}

Maximum input voltage for Logic 0.

V_{INH}

Minimum input voltage for Logic 1.

I_{INL} (I_{INH})

Input current of the digital input.

C_S (OFF)

Off switch source capacitance. Measured with reference to ground.

C_D, C_S (ON)

On switch capacitance. Measured with reference to ground.

C_{IN}

Digital input capacitance.

t_{ON}

Delay time between the 50% and the 90% points of the digital input and switch on condition.

t_{OFF}

Delay time between the 50% and the 90% points of the digital input and switch off condition.

t_{BBM}

On or off time measured between the 80% points of both switches when switching from one to another.

Charge Injection

A measure of the glitch impulse transferred from the digital input to the analog output during on-off switching.

Off Isolation

A measure of unwanted signal coupling through an off switch.

Crosstalk

A measure of unwanted signal that is coupled through from one channel to another as a result of parasitic capacitance. This is specified for two conditions:

- Adjacent channel, that is, S1A to S2A, S1B to S2B, S3A to S4A, or S3B to S4B.
- Adjacent switch, that is, S1A to S1B, S2A to S2B, S3A to S3B, or S4A to S4B.

–3 dB Bandwidth

The frequency at which the output is attenuated by 3 dB.

On Response

The frequency response of the on switch.

Insertion Loss

The loss due to the on resistance of the switch.

THD + N

The ratio of the harmonic amplitudes plus signal noise to the fundamental.
