

DESCRIPTION

Demonstration circuit 1223A-B facilitates communication between PC-based user interface software and Linear Technology SMBus/I²C demonstration boards. DC1223A-B connects to the computer via USB. It receives power from the USB and isolates the computer ground from the SMBus/I²C demonstration board. DC1223A-B adds to DC1223A, the SMBus monitoring feature. The DC1223A-B can be used in three ways, depending on the software available for the demonstration board under evaluation (DBUE):

QuikEval Mode

QuikEval[®] mode is the easiest way to communicate with a Linear Technology SMBus/I²C demonstration board. However this is limited to newer battery charger demo boards like the DC1259A. QuikEval application-specific user interfaces are available at <http://www.linear.com/designtools/software/>. Figure 2 shows an example of an application-specific user interface for the DC1259A demo board.

General User Interface Mode

General user interface mode is for demo boards that do not offer customized software. The general user interface is PC-based, and graphical, but not application specific. It can send out discrete commands to any SMBus/I²C device (see Figure 2 and Appendix A), supporting nine different SMBus command protocols: Send Byte, Receive Byte,

Write Byte, Read Byte, Write Word, Read Word, Block Write, Block Read and Block Write-Read Process calls. It also supports additional command protocols for PMBus: Extended Read Byte, Extended Write Byte, Extended Read Word, Extended Write Word and Group Send. It can also monitor the SMBus traffic of an existing communication between a master and a slave. Contact the Linear Technology sales department for the latest general user interface software.

DC410 Emulation Mode (Windows XP Only)

A number of Linear Technology demonstration boards offer software for use with the DC410 Serial Port-to-SMBus Interface Board, e.g. DC285 (LTC1695), DC182 (LT1786F), DC286 (LTC1960), DC486 (LTC1760), DC496 (LTC4008), and DC512 (LTC4100). For these boards, the DC1223A-B can be used to replace DC410. These demo boards have application-specific user interface programs but they are not part of the QuikEval software program. These application-specific programs are available from Linear Technology sales department.

Note: This is not a standard mode of operation. Please see detailed Instructions in Appendix B to replace DC410 with DC1223A-B .

Design files for this circuit board are available at <http://www.linear.com/demo/DC1223A-B>

LT, LT, LTC, LTM, Linear Technology and the Linear logo are registered trademarks and QuikEval is a trademark of Linear Technology Corporation. All other trademarks are the property of their respective owners.

QUICK START PROCEDURE (QuikEval MODE)

Demonstration circuit 1223A-B is easy to set up to evaluate the performance of Linear Technology SMBus/I²C demonstration boards DC1223A-B. Refer to Figure 1 for proper measurement equipment setup and follow the procedure below.

Note: The DC1223A-B is powered from the Host PC via USB.

1. Download the QuikEval software from <http://www.linear.com/designtools/software/>. Follow the installation instructions carefully.
2. When prompted to plug in the demo board, first connect the USB cable to the DC1223A-B and then connect the Demonstration Board Under Evaluation (DBUE) to the DC1223A-B. Power up the DBUE as recommended in its Quick Start Guide.

3. Check to see if there are already pull-up resistors on the DBUE. If yes, set jumpers JP1 and JP2 on DC1223A-B to Open.
4. Check to make sure jumper JP4 is on "Direct". JP4 should only be on "VCP" if it is doing RS232 emulation for replacing DC410. See Appendix B for this feature.
5. The "Found New Hardware Wizard" window may pop up. If it does then choose the "Recommended" Installation.

NOTE: If Windows cannot find the device driver, then select "Install from a list or specific location(Advanced)". Enter the installation path as "C:\Program Files\LTC\QuikEval\driver".

The associated software for the DBUE should pop up.

Figure 1. Typical Equipment Setup

QUICK START PROCEDURE (QuikEval MODE)

Figure 2. DC1259A Application-Specific User Interface Program (QuikEval)

APPENDIX A: USING DC1223A-B'S GENERAL USER INTERFACE

1. Make sure you have the latest version of DC1223AB.zip. Do not connect the USB cable to the PC yet. Install the DC1223A-B.msi software if not already done. <http://www.linear.com/designtools/software/>.

Note: For Windows Vista users, please follow the instructions available in the DC1223A-B.zip folder. Read the “Installing DC1223AB_Vista.htm” file.

2. **Move JP4 of DC1223A-B to Direct if it is not already done. This is very important!**
3. Download the QuikEval software from <http://www.linear.com/designtools/software/>. Follow the installation instructions carefully.
4. When prompted to plug in the demo board, first connect the USB cable to the DC1223A-B and then connect the Demonstration Board Under Evaluation (DBUE) to the DC1223A-B. Power up the DBUE as recommended in its Quick Start Guide.
5. Connect the hardware the same way as shown in Figure 6.

Figure 3. SCL, SDA, GND Connections to Any SMBus Device

Note: It is not necessary to use a DC486. Any SMBus device with SCL, SDA, GND can be connected to DC1223A-B via the P2 connector. For example you can use a smart battery as a SMBus device as shown in Figure 6. Smart battery is a master/slave device.

6. Launch DC1223A-B_Monitor.exe.
7. A General User Interface window appears as shown in Figure 4. Input the slave address and the commands to talk to the smart battery or LTC1760. 16HEX is the slave address of the smart battery. A 16HEX device command is the AlarmWarning() command sent to the battery. The read word result is 00C0HEX, meaning no alarms raised except that the battery is currently discharging. For more information about the meaning of device command 16HEX go to View → SBS → SBS Table.
8. To go into SMBus Monitor mode, go to Tools → Monitor. You will see the windows in Figure 5. For more detail instructions go to Help → Help Topics.

Figure 4. General User Interface for SMBus Communication

APPENDIX A: USING DC1223A-B'S GENERAL USER INTERFACE

Figure 5. General User Interface SMBus Monitor Mode

APPENDIX B: DC410 EMULATION MODE (WINDOWS XP ONLY)

A number of older battery charger demonstration boards, including the DC286 (LTC1960), DC486 (LTC1760), DC496 (LTC4008) and DC512 (LTC4100) used the DC410 to send SMBus commands to/from a PC via a serial RS232 com port. The software developed for this configuration was based on Labview. This software is provided when you order these older demo boards.

Please contact Linear Technology Applications if you need a copy. However, as RS232 is disappearing, and is being replaced by USB, the DC1223A-B replaces the DC410. The DC1223A-B can be used to emulate a RS232 com port for backwards compatibility with the existing application-specific Labview software.

Note: If you don't want to use the legacy Labview software which requires RS232 emulation, you can alternatively use a General User Interface(GUI) software developed to communicate using DC1223A-B which does not require RS232 emulation (use USB directly). However you will be missing the user friendly interface specific to a particular device, for example the LTC1760, LTC4100 or LTC1960 available in the legacy Labview program. Instead the GUI requires you to input the parameters yourself. For the GUI program, skip the below instructions and go to the Appendix A.

So the new configuration is a DC486 (for example) and a DC1223A-B. The same Labview software can still be used. However, you need to follow these steps as it involved RS232 emulation.

Installing Software to Emulate DC410 (RS232)

1. Connect the hardware as shown in Figure 6. Do not connect the USB port to the computer yet.
2. DC1223A-B jumper positions should be:

JP5 on "5V"

JP4 on "VCP" (Virtual Com Port)

Note: This is a very important step. When you change the jumper to JP4, you are telling the FTDI chip to emulate a RS232 port. If JP4 is on "Direct", the FTDI chip will communicate directly as a USB.

3. Install DC1223A-B.msi, but don't run it. If you need a copy of the software please go to <http://www.linear.com/designtools/software/>.

Note: For Windows Vista users, please follow the instructions available in the DC1223A-B.zip folder. Read the "Installing DC1223AB_Vista.htm" file.

4. Download the QuikEval software from <http://www.linear.com/designtools/software/>. Follow the installation instructions carefully.
5. When prompted to plug in the demo board, first connect the USB cable to the DC1223A-B and then connect the Demonstration Board Under Evaluation (DBUE) to the DC1223A-B. Power up the DBUE as recommended in its Quick Start Guide.
6. Go to the computer's device manager by choosing (Start → Control Panel → System → Hardware tab Device Manager). Look at the ports (COM and LPT).

Notice the USB Serial Port (COM4). This tells you that a Virtual Com Port now exists (the USB emulated a RS232 com port) so that you can continue using the legacy Labview program. See Figure 8.

7. If the RS232 com port emulated is higher than 4, please change it to any number between 1 and 4 by right clicking on ports (COM & LPT), select the Port Settings tab and select Advanced. Change the Com port number to a number from 1 to 4. See Figure 9.
8. Launch the software for the demo board under evaluation (e.g., DC486) and when prompted to enter the RS232 com port, use the number you obtained from step 8. If you need a copy of the software please contact Linear Technology Sales Department. For DC486, you will need dc486v2.exe. See Figure 10.

APPENDIX B: DC410 EMULATION MODE (WINDOWS XP ONLY)

Figure 6. Hardware Setup Between a DC1223A-B and a DC486 (Can Be DC512, DC486, DC286, Etc.). JP4 Should Be on VCP.

Linear Technology Corporation makes no representation that the interconnection of its circuits as described herein will not infringe on existing patent rights.

DEMO MANUAL DC1223A-B

DEMONSTRATION BOARD IMPORTANT NOTICE

Linear Technology Corporation (LTC) provides the enclosed product(s) under the following **AS IS** conditions:

This demonstration board (DEMO BOARD) kit being sold or provided by Linear Technology is intended for use for **ENGINEERING DEVELOPMENT OR EVALUATION PURPOSES ONLY** and is not provided by LTC for commercial use. As such, the DEMO BOARD herein may not be complete in terms of required design-, marketing-, and/or manufacturing-related protective considerations, including but not limited to product safety measures typically found in finished commercial goods. As a prototype, this product does not fall within the scope of the European Union directive on electromagnetic compatibility and therefore may or may not meet the technical requirements of the directive, or other regulations.

If this evaluation kit does not meet the specifications recited in the DEMO BOARD manual the kit may be returned within 30 days from the date of delivery for a full refund. **THE FOREGOING WARRANTY IS THE EXCLUSIVE WARRANTY MADE BY THE SELLER TO BUYER AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE. EXCEPT TO THE EXTENT OF THIS INDEMNITY, NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.**

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user releases LTC from all claims arising from the handling or use of the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge. Also be aware that the products herein may not be regulatory compliant or agency certified (FCC, UL, CE, etc.).

No License is granted under any patent right or other intellectual property whatsoever. **LTC assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or any other intellectual property rights of any kind.**

LTC currently services a variety of customers for products around the world, and therefore this transaction **is not exclusive**.

Please read the DEMO BOARD manual prior to handling the product. Persons handling this product must have electronics training and observe good laboratory practice standards. **Common sense is encouraged.**

This notice contains important safety information about temperatures and voltages. For further safety concerns, please contact a LTC application engineer.
