#### Features

Single Supply: Vdd = +2.75 to +5.5V Low Noise Figure: 1.5 dB High Output IP3: +37 dBm No External Matching Required

### Functional Diagram

### **General Description**

The HMC374 & HMC374E are general purpose broad band Low Noise Amplifiers (LNA) for use in the 0.3 -3 GHz frequency range. The LNA provides 15 dB of gain and a 1.5 dB noise figure from a single positive supply of +2.75 to +5.5V. The low noise figure coupled with a high P1dB (22 dBm) and high OIP3 (37 dBm) make this part ideal for cellular applications. The compact LNA design utilizes on-chip matching for repeatable gain and noise figure performance. To minimize board area the design is offered in a low cost SOT26 package that occupies only 0.118" x 0.118".

The circuit board used in the final application should use RF circuit design techniques. Signal lines should have 50 ohm impedance while the package ground leads should be connected directly to the ground plane similar to that shown above. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.
