

## 3 dB LSB GaAs MMIC 4-BIT DIGITAL ATTENUATOR, DC - 6 GHz

### Typical Applications

The HMC629LP4(E) is ideal for:

- Cellular/3G Infrastructure
- WiBro / WiMAX / 4G
- Microwave Radio & VSAT
- Test Equipment and Sensors
- IF & RF Applications

### Features

- 3 dB LSB Steps to 45 dB
- Power-Up State Selection
- Low Insertion Loss: 2.5 dB
- TTL/CMOS Compatible, Serial, Parallel or Latched Parallel Control
- ±0.25 dB Typical Step Error
- Single +3V or +5V Supply
- 24 Lead 4x4mm SMT Package: 16mm<sup>2</sup>

### Functional Diagram

### General Description

The HMC629LP4(E) is a broadband 4-bit GaAs IC Digital Attenuator in a low cost leadless SMT package. This versatile digital attenuator incorporates off-chip AC ground capacitors for near DC operation, making it suitable for a wide variety of RF and IF applications. The dual mode control interface is CMOS/TTL compatible, and accepts either a three wire serial input or a 4-bit parallel word. For applications which require only 33 dB of attenuation range, the HMC629LP4(E) provides excellent attenuation accuracy up to 10 GHz. The HMC629LP4(E) is housed in a RoHS compliant 4x4 mm QFN leadless package, and requires no external matching components.

### Electrical Specifications,

$T_A = +25^\circ\text{C}$ , 50 Ohm System, with  $V_{dd} = +5V$  &  $V_{ctl} = 0/+5V$  (Unless Otherwise Noted)

| Parameter  | Frequency (GHz) | Min.                                 | Typ. | Max. | Units    |
|--|-----------------|--------------------------------------|------|------|----------|
| Insertion Loss   | DC - 6          |                                      | 2.5  | 5    | dB<br>dB |
| Attenuation Range  | DC - 6          |                                      | 45   |      | dB       |
| Return Loss (ATTIN, ATTOUT, All Atten. States)                                 | DC - 6          |                                      | 17   |      | dB       |
| Attenuation Accuracy: (Referenced to Insertion Loss)<br>All Attenuation States |                 | ± (0.50 + 5% of Atten. Setting) Max. |      |      | dB<br>dB |

**Serial Control Interface**

The HMC629LP4E contains a 3-wire SPI compatible digital interface (SERIN, CLK, LE). The serial control interface is activated when P/S is kept high. The 4-bit serial word must be loaded MSB first. The positive-edge sensitive CLK and LE requires clean transitions. If mechanical switches are used, sufficient debouncing should be provided. When LE is high, 4-bit data in the serial input register is transferred to the attenuator. When LE is high CLK is masked to prevent data transition during output loading.

When P/S is low, 3-wire SPI interface inputs (SERIN, CLK, LE) are disabled and the input register is loaded with parallel digital inputs (D0-D5). When LE is high, 4-bit parallel data changes the state of the part per truth table.

For all modes of operations, the state will stay constant while LE is kept low.

## 3 dB LSB GaAs MMIC 4-BIT DIGITAL ATTENUATOR, DC - 6 GHz

| Parameter                                 | Typ.   |
|---|--------|
| Min. serial period, $t_{SCK}$             | 100 ns |
| Control set-up time, $t_{CS}$             | 20 ns  |
| Control hold-time, $t_{CH}$               | 20 ns  |
| LE setup-time, $t_{LN}$                   | 10 ns  |
| Min. LE pulse width, $t_{LEW}$            | 10 ns  |
| Min LE pulse spacing, $t_{LES}$           | 630 ns |
| Serial clock hold-time from LE, $t_{CKN}$ | 10 ns  |
| Hold Time, $t_{PH}$                       | 0 ns   |
| Latch Enable Minimum Width, $t_{LEN}$     | 10 ns  |
| Setup Time, $t_{PS}$                      | 2 ns   |

**Timing Diagram (Latched Parallel Mode)**

### Parallel Mode (Direct Parallel Mode & Latched Parallel Mode)

**Note:** The parallel mode is enabled when P/S is set to low.

**Direct Parallel Mode** - The attenuation state is changed by the Control Voltage Inputs directly. The LE (Latch Enable) must be at a logic high to control the attenuator in this manner.

**Latched Parallel Mode** - The attenuation state is selected using the Control Voltage Inputs and set while the LE is in the Low state. The attenuator will not change state while LE is Low. Once all Control Voltage Inputs are at the desired states the LE is pulsed. See timing diagram below for reference.

### Power-Up States

If LE is set to logic LOW at power-up, the logic state of PUP1 and PUP2 determines the power-up state of the part per PUP truth table. If the LE is set to logic HIGH at power-up, the logic state of D3-D0 determines the power-up state of the part per truth table. The attenuator latches in the desired power-up state approximately 200 ms after power-up.

**PUP Truth Table**

| LE | PUP1 | PUP2 | Attenuation State |
|----|------|------|-------------------|
| 0  | 0    | 0    | 45 dB             |
| 0  | 1    | 0    | 45 dB             |
| 0  | 0    | 1    | 45 dB             |
| 0  | 1    | 1    | Insertion Loss    |
| 1  | X    | X    | 0 to 45 dB        |

Note: Power-Up with LE= 1 provides direct parallel operation with D0 - D3.

### Power-On Sequence

The ideal power-up sequence is: GND, Vdd, digital inputs, RF inputs. The relative order of the digital inputs are not important as long as they are powered after Vdd / GND

### Bias Voltage

| Vdd (Vdc) | Idd (Typ.) (mA) |
|-----------|-----------------|
| 5         | 2.0             |

### Control Voltage Table

| State | Vdd = +3V              | Vdd = +5V              |
|-------|------------------------|------------------------|
| Low   | 0 to 0.5V @ <1 $\mu$ A | 0 to 0.8V @ <1 $\mu$ A |
| High  | 2 to 3V @ <1 $\mu$ A   | 2 to 5V @ <1 $\mu$ A   |

**Truth Table**

| Control Voltage Input |      |      |      | Attenuation State |
|-----------------------|------|------|------|-------------------|
| D3                    | D2   | D1   | D0   |                   |
| High                  | High | High | High | Reference I.L.    |
| High                  | High | High | Low  | 3 dB              |
| High                  | High | Low  | High | 6 dB              |
| High                  | Low  | High | High | 12 dB             |
| Low                   | High | High | High | 24 dB             |

Any combination of the above states will provide an attenuation approximately equal to the sum of the bits selected.

### Outline Drawing

NOTES:

- LEADFRAME MATERIAL: COPPER ALLOY
- DIMENSIONS ARE IN INCHES [MILLIMETERS]
- LEAD SPACING TOLERANCE IS NON-CUMULATIVE.
- PAD BURR LENGTH SHALL BE 0.15mm MAXIMUM.  
PAD BURR HEIGHT SHALL BE 0.05mm MAXIMUM.
- PACKAGE WARP SHALL NOT EXCEED 0.05mm.
- ALL GROUND LEADS AND GROUND PADDLE MUST BE SOLDERED TO PCB RF GROUND.
- REFER TO PCB DESIGN AND ASSEMBLY FOR QFN PACKAGES APPLICATION NOTE FOR SUGGESTED LAND PATTERN.

### Package Information

[2] Circuit Board Material: Arlon 25FR

The circuit board used in the application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.
