

25 - 3000 MHz

FRACTIONAL-N PLL WITH INTEGRATED VCO

RoHS

Features

- RF Bandwidth: 25 - 3000 MHz
- Maximum Phase Detector Rate 100 MHz
- Ultra Low Phase Noise -110 dBc/Hz in Band Typ.
- Figure of Merit (FOM) -227 dBc/Hz

Typical Applications

- Cellular/4G Infrastructure
- Repeaters and Femtocells
- Communications Test Equipment
- CATV Equipment

- · Phased Array Applications DDS Replacement
 - Very High Data Rate Radios
 - Tunable Reference Source for Spurious-Free Performance

FRACTIONAL-N PLL WITH INTEGRATED VCO 25 - 3000 MHz

General Description

The HMC830LP6GE is a low noise, wide band, Fractional-N Phase-Locked-Loop (PLL) that features an integrated Voltage Controlled Oscillator (VCO) with a fundamental frequency of 1500 MHz - 3000 MHz, and an integrated VCO Output Divider (divide by 1/2/4/6.../60/62), that together allow the HMC830LP6GE to generate frequencies from 25 MHz to 3000 MHz. The integrated Phase Detector (PD) and delta-sigma modulator, capable of operating at up to 100 MHz, permit wider loop-bandwidths with excellent spectral performance.

v03.0512

The HMC830LP6GE features industry leading phase noise and spurious performance, across all frequencies, that enable it to minimize blocker effects, and improve receiver sensitivity and transmitter spectral purity. The superior noise floor (< -170 dBc/Hz) makes the HMC830LP6GE an ideal source for a variety of applications - such as; LO for RF mixers, a clock source for high-frequency data-converters, or a tunable reference source for ultra-low spurious applications.

Additional features of the HMC830LP6GE include RF output power control from 0 to 9 dB (3 dB steps), output Mute function, and a delta-sigma modulator Exact Frequency Mode which enables users to generate output frequencies with 0 Hz frequency error.

For theory of operation and register map refer to the "PLLs with Integrated VCOs - RF VCOs Operating Guide". To view the Operating Guide, please visit www.hittite.com and choose HMC830LP6GE from the "Search by Part Number" pull down menu.

Parameter	Condition	Min.	Тур.	Max.	Units
RF Output Characteristics					
Output Frequency		25		3000	MHz
VCO Frequency at PLL Input		1500		3000	MHz
RF Output Frequency at f _{VCO}		1500		3000	MHz
Output Power					
RF Output Power at f_{VCO} = 2000 MHz Across All Frequencies see Figure 10	Broadband Matched Internally [1]	4.5	6	7.5	dBm
Output Power Control	3 dB Steps	7		9	dB
Harmonics					
fo Mode at 2 GHz	2nd / 3rd / 4th		-20/-29/-45		dBc
fo/2 Mode at 2GHz/2 = 1 GHz	2nd / 3rd / 4th		-23/-15/-35		dBc
fo/30 Mode at 3 GHz/30 = 100 MHz	2nd / 3rd / 4th		-25/-10/-33		dBc
fo/62 Mode at 1550 MHz/62 = 25 MHz	2nd / 3rd / 4th		-17/-8/-21		dBc

Typical Reset Voltage on DVDD			700		mV
Min DVDD Voltage for No Reset		1.5			V
Power on Reset Delay			250		μs
VCO Open Loop Phase Noise at fo @ 2 GHz	2				
10 kHz Offset			-86		dBc/Hz

[3] Slew rate of greater or equal to 0.5 ns/V is recommended, see <u>PLL with Integrated RF VCOs Operating Guide</u> for more details. Frequency is guaranteed across process voltage and temperature from -40 °C to 85 °C.

[4] This maximum phase detector frequency can only be achieved if the minimum N value is respected. eg. In the case of fractional feedback mode, the maximum PFD rate = fvco/20 or 100 MHz, whichever is less.

Figure 22. Low Frequency Performance [11]

Loop Filter BW (kHz)	C1 (pF)	C2 (nF)	C3 (pF)	C4 (pF)	R2 (kΩ)	R3 (kΩ)	R4 (kΩ)	Loop Filter Design
74	150	27	220	220	0.82	1	1	$\begin{array}{c ccccccccccccccccccccccccccccccccccc$
90	270	3.9	56	56	1.2	1	1	

[9] Capability of HMC830LP6GE to generate low frequencies (as low as 25 MHz), enables the HMC830LP6GE to be used as a tunable reference source into another HMC830LP6GE, which maximizes spur performance of the second HMC830LP6GE. Please see <u>"HMC830LP6GE</u> <u>Application Information</u>" for more information.

[10] The graph is generated by observing, and plotting, the magnitude of only the worst spur (largest magnitude), at any offset, at each output frequency, while using a fixed 50 MHz reference and a tunable reference tuned to 47.5 MHz. See <u>"HMC830LP6GE Application Information"</u> for more details.

[11] Phase noise performance of the HMC830LP6GE when used as a tunable reference source. HMC830LP6GE is operating at 3 GHz/30, 3 GHz/54, and 1.55 GHz/62 for the 100 MHz, 55.55 MHz, and 25 MHz curves respectively. 25 MHz output is 50 MHz low pass filtered prior to input to second PLL. 100 MHz and 55.55 MHz curves were not filtered.

Information furnished by Analog Devices is believed to be accurate and reliable. However, no responsibility is assumed by Analog Devices for its use, nor for any infringements of patents or other rights of third parties that may result from its use. Specifications subject to change without notice. No license is granted by implication or otherwise under any patent or patent rights of Analog Devices. v03.0512

HMC830LP6GE

FRACTIONAL-N PLL WITH INTEGRATED VCO 25 - 3000 MHz

Pin Descriptions

Pin Number	Function	Description		
1	AVDD	DC Power Supply for analog circuitry.		
2, 5, 6, 8, 9, 11 - 14, 18 - 22, 24, 26, 34, 37, 38	N/C	The pins are not connected internally; however, all data shown herein was measured with these pins connected to RF/DC ground externally.		
3	VPPCP	Power Supply for charge pump analog section		
4	СР	Charge Pump Output		
7	VDDLS	Power Supply for the charge pump digital section		
10	RVDD	Reference Supply		
15	XREFP	Reference Oscillator Input		
16	DVDD3V	DC Power Supply for Digital (CMOS) Circuitry		
17	CEN	Chip Enable. Connect to logic high for normal operation.		
23	VTUNE	VCO Varactor. Tuning Port Input.		
25	VCC2	VCO Analog Supply 2		
27	VCC1	VCO Analog Supply 1		
28	RF_N	RF Negative Output (On in differential configuration, On in single-ended configuration)		
29	RF_P	RF Positive Output (On in differential configuration, Off in single-ended configuration)		
30	SEN	PLL Serial Port Enable (CMOS) Logic Input		
31	SDI	PLL Serial Port Data (CMOS) Logic Input		
32	SCK	PLL Serial Port Clock (CMOS) Logic Input		
33	LD_SDO	Lock Detect, or Serial Data, or General Purpose (CMOS) Logic Output (GPO)		
35	VCCHF	DC Power Supply for Analog Circuitry		
36	VCCPS	DC Power Supply for Analog Prescaler		
39	VCCPD	DC Power Supply for Phase Detector		
40	BIAS	External bypass decoupling for precision bias circuits. Note: 1.920V ±20mV reference voltage (BIAS) is generated internally and canno drive an external load. Must be measured with 10GΩ meter such as Agilent 34410 normal 10MΩ DVM will read erroneously.		

Information furnished by Analog Devices is believed to be accurate and reliable. However, no responsibility is assumed by Analog Devices for its use, nor for any infringements of patents or other rights of third parties that may result from its use. Specifications subject to change without notice. No license is granted by implication or otherwise under any patent or patent rights of Analog Devices. FRACTIONAL-N PLL WITH INTEGRATED VCO 25 - 3000 MHz

Absolute Maximum Ratings

AVDD, RVDD, DVDD3V, VCCPD, VCCHF, VCCPS	-0.3 V to +3.6 V
VPPCP, VDDLS, VCC1	-0.3 V to +5.5 V
VCC2	-0.3 V to +5.5 V
Operating Temperature	-40 °C to +85 °C
Storage Temperature	-65 °C to 150 °C
Maximum Junction Temperature	150 °C
Thermal Resistance (O _{JC}) (junction to case (ground paddle))	9 °C/W
Reflow Soldering	
Peak Temperature	260 °C
Time at Peak Temperature	40 sec
ESD Sensitivity (HBM)	Class 1B

v03.0512

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Recommended Operating Conditions

Parameter	Condition	Min.	Тур.	Max.	Units		
Temperature							
Junction Temperature				125	°C		
Ambient Temperature		-40		85	°C		
Supply Voltage							
AVDD, RVDD, DVDD3V, VCCPD, VCCHF, VCCPS		3.0	3.3	3.5	V		
VPPCP, VDDLS, VCC1, VCC2		4.8	5	5.2	V		

[1] Layout design guidelines set out in Qualification Test Report are strongly recommended.

Information furnished by Analog Devices is believed to be accurate and reliable. However, no responsibility is assumed by Analog Devices for its use, nor for any infringements of patents or other rights of third parties that may result from its use. Specifications subject to change without notice. No license is granted by implication or otherwise under any patent or patent or rights of Analog Devices. Trademarks and registered trademarks are the property of their respective owners.

Outline Drawing

v03.0512

6. PAD BURR LENGTH SHALL BE 0.15mm MAX. PAD BURR HEIGHT SHALL BE 0.25mm MAX.

7. PACKAGE WARP SHALL NOT EXCEED 0.05mm.

8. ALL GROUND LEADS AND GROUND PADDLE MUST BE SOLDERED TO PCB RF GROUND.

9. REFER TO HITTITE APPLICATION NOTE FOR SUGGESTED PCB LAND PATTERN.

FRACTIONAL-N PLL WITH INTEGRATED VCO 25 - 3000 MHz

Evaluation PCB

v03.0512

The circuit board used in the application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.

Evaluation PCB Schematic

To view this <u>Evaluation PCB Schematic</u> please visit <u>www.hittite.com</u> and choose HMC830LP6GE from the "Search by Part Number" pull down menu to view the product splash page.

HMC830LP6GE Application Information

v03.0512

Large bandwidth (25 MHz to 3000 MHz), industry leading phase noise and spurious performance, excellent noise floor (<-170 dBc/Hz), coupled with a high level of integration make the HMC830LP6GE ideal for a variety of applications; as an RF or IF stage LO, a clock source for high-frequency data-converters, or a tunable reference source for extremely low spurious applications (< -100 dBc/Hz spurs).

Figure 23. HMC830LP6GE in a typical transmit chain

Figure 24. HMC830LP6GE in a typical receive chain

Figure 25. HMC830LP6GE used as a tunable reference for second HMC830LP6GE

Using the HMC830LP6GE with a tunable reference as shown in Figure 25, it is possible to drastically improve spurious emissions performance across all frequencies. Example shown in Figure 21 graph shows that it is possible to have spurious emissions < -100 dBc/Hz across all frequencies. For more information about spurious emissions, how they are related to the reference frequency, and how to tune the reference frequency for optimal spurious performance please see the "Spurious Performance" section of <u>Hittite PLL w/ Integraged VCOs Operating Guide</u>. Note that at very low output frequencies < 100 MHz, harmonics increase due to small internal AC coupling. Applications which are sensitive to harmonics may require external low pass filtering.
