

# 8GB DDR3 – SDRAM ECC SO-DIMM

## 204 Pin ECC SO-UDIMM

## SLN08G72G2BE2MT-xxRT

## 8GByte in FBGA Technology

## RoHS compliant

### Options:

- |                             |                   |             |
|-----------------------------|-------------------|-------------|
| ▪ Data Rate / Latency       |                   | Marking     |
| DDR3 1333 MT/s CL9          |                   | -CC         |
| DDR3 1600 MT/s CL11         |                   | -DC         |
| ▪ Module density            |                   |             |
| 8GB with 18 dies and 2 rank |                   |             |
| ▪ Standard Grade            | (T <sub>A</sub> ) | 0°C to 70°C |
|                             | (T <sub>C</sub> ) | 0°C to 85°C |

### Environmental Requirements:

- Operating temperature (ambient)  
Standard Grade 0°C to 70°C
- Operating Humidity  
10% to 90% relative humidity, noncondensing
- Operating Pressure  
105 to 69 kPa (up to 10000 ft.)
- Storage Temperature  
-55°C to 100°C
- Storage Humidity  
5% to 95% relative humidity, noncondensing
- Storage Pressure  
1682 PSI (up to 5000 ft.) at 50°C

### Features:

- 204-pin 72-bit DDR3 Small Outline, Dual-In-Line Double Data Rate synchronous DRAM Module
- Module organization: dual rank 1024M x 72
- V<sub>DD</sub> = 1.35V and 1.5V
- V<sub>DDQ</sub> = 1.35V and 1.5V
- 1.5V I/O (SSTL\_15 compatible)
- Fly-by-bus with termination for C/A & CLK bus
- On-board I<sup>2</sup>C temperature sensor with integrated serial presence-detect (SPD) EEPROM
- Gold-contact pad
- This module is fully pin and functional compatible to the JEDEC EP3-12800 DDR3 SDRAM 72bit-SO-DIMM design spec. and JEDEC- Standard MO-268. (see [www.jedec.org](http://www.jedec.org))
- The pcb and all components are manufactured according to the RoHS compliance specification [EU Directive 2002/95/EC Restriction of Hazardous Substances (RoHS)]
- DDR3 - SDRAM component Micron MT41K512M8RH-125:E**
- 512Mx8 DDR3 SDRAM in PG-TFBGA-78 package
- 8-bit prefetch architecture
- Programmable CAS Latency, CAS Write Latency, Additive Latency, Burst Length and Burst Type.
- On-Die-Termination (ODT) and Dynamic ODT for improved signal integrity.
- Refresh, Self Refresh and Power Down Modes.
- ZQ Calibration for output driver and ODT.
- System Level Timing Calibration Support via Write

Figure: mechanical dimensions<sup>1</sup>

This Swissbit module is an industry standard 204-pin 8-byte DDR3 SDRAM ECC Small Outline Dual-In-line Memory Module (SO-UDIMM) which is organized as x72 high speed CMOS memory arrays. The module uses internally configured octal-bank DDR3 SDRAM devices. The module uses double data rate architecture to achieve high-speed operation. DDR3 SDRAM modules operate from a differential clock (CK and CK#). READ and WRITE accesses to a DDR3 SDRAM module is burst-oriented; accesses start at a selected location and continue for a programmed number of locations in a programmed sequence. The burst length is either four or eight locations. An auto precharge function can be enabled to provide a self-timed row precharge that is initiated at the end of a burst access. The DDR3 SDRAM devices have a multibank architecture which allows a concurrent operation that is providing a high effective bandwidth. A self refresh mode is provided and a power-saving "power-down" mode. All inputs and all full drive-strength outputs are SSTL\_15 compatible.

The DDR3 SDRAM module uses the serial presence detect (SPD) function implemented via serial EEPROM using the standard I<sup>2</sup>C protocol. This nonvolatile storage device contains 256 bytes. The first 128 bytes are utilized by the SO-UDIMM manufacturer (Swissbit) to identify the module type, the module's organization and several timing parameters. The second 128 bytes are available to the end user.

### Module Configuration

| Organization | DDR3 SDRAMs used         | Row Addr. | Device Bank Addr. | Column Addr. | Refresh | Module Bank Select |
|--------------|--------------------------|-----------|-------------------|--------------|---------|--------------------|
| 1G x 72bit   | 18 x 512M x 8bit (4Gbit) | 16        | BA0, BA1, BA2     | 10           | 8k      | S0#, S1#           |

| Module Dimensions                                |
|--------------------------------------------------|
| in mm                                            |
| 67.60 (long) x 30(high) x 3.80 [max] (thickness) |

### Timing Parameters

| Part Number          | Module Density | Transfer Rate | Clock Cycle/Data bit rate | Latency  |
|----------------------|----------------|---------------|---------------------------|----------|
| SLN08G72G2BE2MT-CCRT | 8GByte         | 10.6 GB/s     | 1.5ns/1333MT/s            | 9-9-9    |
| SLN08G72G2BE2MT-DCRT | 8GByte         | 12.8 GB/s     | 1.25ns/1600MT/s           | 11-11-11 |

### Pin Name

|                 |                                                                                      |
|-----------------|--------------------------------------------------------------------------------------|
| A0-9, A11 – A15 | Address Inputs                                                                       |
| A10/AP          | Address Input / Autoprecharge Bit                                                    |
| BA0 – BA2       | Bank Address Inputs                                                                  |
| DQ0 – DQ63      | Data Input / Output                                                                  |
| CB0 – CB07      | ECC check bits                                                                       |
| DM0-DM8         | Input Data Mask                                                                      |
| DQS0 – DQS8     | Data Strobe, positive line                                                           |
| DQS0# - DQS8#   | Data Strobe, negative line (only used when differential data strobe mode is enabled) |
| RAS#            | Row Address Strobe                                                                   |
| CAS#            | Column Address Strobe                                                                |
| WE#             | Write Enable                                                                         |
| CKE0 – CKE1     | Clock Enable                                                                         |
| S0#, S1#        | Chip Select                                                                          |
| CK0 – CK1       | Clock Inputs, positive line                                                          |
| CK0# - CK1#     | Clock Inputs, negative line                                                          |

|                    |                                                                                       |
|--------------------|---------------------------------------------------------------------------------------|
| Event#             | Temperature event: The EVENT# pin is asserted by the temperature sensor when critical |
| V <sub>DD</sub>    | Supply Voltage (1.5V± 0.075V)                                                         |
| V <sub>REFDQ</sub> | Reference voltage: DQ, DM (V <sub>DD</sub> /2)                                        |
| V <sub>REFCA</sub> | Reference voltage: Control, command, and address (V <sub>DD</sub> /2)                 |
| V <sub>SS</sub>    | Ground                                                                                |
| V <sub>TT</sub>    | Termination voltage: Used for control, command, and address (V <sub>DD</sub> /2).     |
| V <sub>DDSPD</sub> | Serial EEPROM Positive Power Supply                                                   |
| SCL                | Serial Clock for Presence Detect                                                      |
| SDA                | Serial Data Out for Presence Detect                                                   |
| SA0 – SA1          | Presence Detect Address Inputs                                                        |
| ODT0, ODT1         | On-Die Termination                                                                    |
| NC                 | No Connection                                                                         |

### Pin Configuration

| Frontside |                    |     |                 |     |                 |     |                    |
|-----------|--------------------|-----|-----------------|-----|-----------------|-----|--------------------|

**Notes:**

1. DQ-to-I/O wiring is shown as recommended but may be changed.
2. DQ/DQS/DQS/ODT/DM/CKE/S relationship must be maintained as shown.
3. DQ, DM, DQS/DQS resistors: Refer to associated topology diagram.
4. Refer to the appropriate clock wiring topology under the DIMM wiring details section of the JEDEC document.
5. For each DRAM, a unique ZQ resistor is connected to GND. The ZQ resistor is 240Ω±1%.
6. Refer to associated figure for SPD details.

## CAPACITANCE

At DDR3 data rates, it is recommended to simulate the performance of the module to achieve optimum values. When inductance and delay parameters associated with trace lengths are used in simulations, they are significantly more accurate and realistic than a gross estimation of module capacitance. Simulations can then render a considerably more accurate result. JEDEC modules are now designed by using simulations to close timing budgets.

# I<sub>DD</sub> Specifications and Conditions

### Temperature Characteristics of Temperature Sensor

$V_{CC} = 3.3 \text{ V} \pm 10\%$ ,  $T_A = -40^\circ\text{C}$  to  $+125^\circ\text{C}$

| Parameter                                              | Test Conditions/Comments                                             | Max       | Unit               |
|--------------------------------------------------------|----------------------------------------------------------------------|-----------|--------------------|
| Temperature Reading Error<br>Class B, JC42.4 compliant | $+75^\circ\text{C} \leq T_A \leq +95^\circ\text{C}$ , active range   | $\pm 1.0$ | $^\circ\text{C}$   |
|                                                        | $+40^\circ\text{C} \leq T_A \leq +125^\circ\text{C}$ , monitor range | $\pm 2.0$ | $^\circ\text{C}$   |
|                                                        | $-40^\circ\text{C} \leq T_A \leq +125^\circ\text{C}$ , sensing range | $\pm 3.0$ | $^\circ\text{C}$   |
| ADC Resolution                                         |                                                                      | 12        | Bits               |
| Temperature Resolution                                 |                                                                      | 0.0625    | $^\circ\text{C}$   |
| Conversion Time                                        |                                                                      | 100       | Ms                 |
| Thermal Resistance <sup>1</sup> $\theta_{JA}$          | Junction-to-Ambient (Still Air)                                      | 92        | $^\circ\text{C/W}$ |

<sup>1</sup> Power Dissipation is defined as  $P_J = (T_J - T_A)/\theta_{JA}$ , where  $T_J$  is the junction temperature and  $T_A$  is the ambient temperature. The thermal resistance value refers to the case of a package being used on a standard 2-layer PCB.

### Slave Address Bits of Temperature Sensor

| Device       | Device Type Identifier |    |    |    | Select Address Signals |                |                | R/W# |
|--------------|------------------------|----|----|----|------------------------|----------------|----------------|------|
|              | b7 <sup>1</sup>        | b6 | b5 | b4 | b3                     | b2             | b1             | b0   |
| EEPROM       | 1                      | 0  | 1  | 0  | A <sub>2</sub>         | A <sub>1</sub> | A <sub>0</sub> | R/W# |
| Temp. Sensor | 0                      | 0  | 1  | 1  | A <sub>2</sub>         | A <sub>1</sub> | A <sub>0</sub> | R/W# |

<sup>1</sup> The most significant bit, b7, is sent first.

# CE Declaration of Conformity

We

**Manufacturer:** Swissbit AG  
Industriestrasse 4  
CH-9552 Bronschhofen  
Switzerland

declare under our sole responsibility that the product

**Product Type:** 8GB DDR3L SO-UDIMM  
**Brand Name:** SWISSMEMORY™  
**Product Series:** DDR3L SO-UDIMM  
**Part Number:** SLN08G72G2BE2MT-xxxRT

to which this declaration relates is in conformity with the following directives:

**2002/96/EC Category 3 (WEEE)**

following the provisions of Directive

**2011/65/EU** **Restriction of the use of certain hazardous substances**

Swissbit AG, Dezember 2012
