Assembling and Installation Method

Installation Method

■ Do not insert a screw more than 6mm from the outside of a power supply to keep enough insulation distance between the screw and internal components.

● PBA10F, PBA15F, PBW15F, PBA30F, PBW30F, PBA50F, PBW50F, PBA75F, PBA100F and PBA150F

- If you use two or more power supplies side by side, please keep a sufficient distance between them to allow enough air ventilation.
- Ambient temperature around each power supply should not exceed the temperature range shown in "derating".

Normal mounting

● PBA300F, PBA600F, PBA1000F, PBA1500F and PBA1500T

- The power supplies have a built-in forced cooling fan. Do not block ventilation at the suction side (terminal block side) and its opposite side (fan installation side). If you need to secure a power supply by screws, securely fix it, taking into consideration of its weight. You can install it in any direction.
- If you use a power supply in a dusty environment, it can give a cause for a failure. Please consider taking such countermeasures as installing an air filter near the suction area of the system to prevent a failure.
- In PBA300F, PBA1500F and PBA1500T, ventilation holes are located on the mounting side. If you would like to install the unit by using that side, please contact us for details.

- In the hatched area, the specification of Ripple, Ripple Noise is different from other area.
- The ambient temperature should be measured 5 to 10 cm away from the power supply so that it won't be influenced by the heat from the power supply. Please consult us for more details.
- Make sure the temperature at point A is less than the temperatures shown in Instruction Manual 4.

●PBA300F, PBA600F, PBA1000F, PBA1500F, PBA1500T Ambient temperature derating curve

- In the hatched area, the specification of Ripple, Ripple Noise is different from other area.
- Derating curve depending on an ambient temperature (temperature of air sucked in for a cooling purpose) is shown above.
