

Intel® Solid State Drive DC S3520 Series

Product Specification

- **Capacity:**
 - 2.5": 240GB, 480GB, 800GB, 960GB, 1.2TB, 1.6TB
 - M.2: 240GB, 480GB, 760GB, 960GB
- **Components:**
 - 3D MLC NAND Flash Memory
 - Standard Endurance Technology (SET)
- **Form Factor:** 2.5-inch, M.2
- **Read and Write IOPS^{1,2}**
(Full LBA Range, IOMeter* Queue Depth 32)
 - Random 4KB³ Reads: Up to 67,500 IOPS
 - Random 4KB Writes: Up to 17,500 IOPS
 - Random 8KB³ Reads: Up to 45,000 IOPS
 - Random 8KB Writes: Up to 9,500 IOPS
- **Bandwidth Performance¹**
 - Sustained Sequential Read: Up to 450 MB/s⁴
 - Sustained Sequential Write: Up to 380 MB/s
- **Endurance:**
 - Up to 2925 TBW (Terabytes Written)
 - Up to 1 drive writes per day⁵ for 5 years
 - Up to 1.6 drive writes per day⁵ for 3 years
- **Latency (average sequential)**
 - Read: 2.5" - 40 µs (TYP); M.2 - 46 µs (TYP)
 - Write: 2.5" - 42 µs (TYP); M.2 - 50 µs (TYP)
- **Quality of Service^{6,8}**
 - Read/Write: 2.5" - 3 ms / <1.5 ms (99.9%); M.2 - TBD
- **Performance Consistency^{7,8}**
 - Read/Write: Up to 98%/85% (99.9%)
- **Self-Encrypting Drive (SED)**
 - AES 256-bit encryption
- **Altitude⁹**
 - Operating: -1,000 to 10,000 ft
 - Operating¹⁰: 10,000 to 15,000 ft
 - Non-operating: -1,000 to 40,000 ft
- **Product Ecological Compliance**
 - RoHS*
- **Compliance**
 - SATA Revision 3.2; compatible with SATA 6Gb/s, 3Gb/s and 1.5Gb/s interface rates
 - ATA/ATAPI Command Set – 3 (ACS-3 Rev 5); includes SCT (Smart Command Transport) and device statistics log support
 - Enhanced SMART ATA feature set
 - Native Command Queuing (NCQ) command set
 - Data set management Trim command
- **Power Management**
 - 2.5" - 5V or 5V+12V SATA Supply Rail¹¹
 - M.2 - 3.3V only
 - SATA Interface Power Management
 - OS-aware hot plug/removal
 - Enhanced power-loss data protection feature
- **Power¹²**
 - Active: Up to 3.5 W⁸ (TYP)
 - Idle: 2.5" - 600 mW; M.2 - 700 mW
- **Weight:**
2.5"
 - 240GB, 480GB: 62 grams ± 2 grams
 - 800GB: 63 grams ± 2 grams
 - 960GB, 1.2TB, 1.6TB: 66 grams ± 2 gramsM.2
 - 240GB, 480GB, 760GB, 960GB: 9 grams ± 1 gram
- **Temperature**
 - Operating: 0° C to 70° C
 - Non-Operating¹³: -55° C to 95° C
 - Temperature monitoring and logging
 - Thermal throttling when approaching maximum operating temperature
- **Shock (operating and non-operating):**
1,000 G / 0.5 ms
- **Vibration**
 - Operating: 2.17 G_{RMS} (5-700 Hz)
 - Non-Operating: 3.13 G_{RMS} (5-800 Hz)
- **Reliability**
 - Uncorrectable Bit Error Rate (UBER):
1 sector per 10¹⁷ bits read
 - Mean Time Between Failures (MTBF): 2 million hours
 - End-to-End data protection
- **Certifications and Declarations**
 - UL*, CE*, C-Tick*, BSMI*, KCC*, Microsoft* WHCK, VCCI*, SATA-IO*
- **Compatibility**
 - Windows 8*, Windows 8.1*, Windows 10*
 - Windows Server 2012*, 2012 R2*
 - Windows Server 2008* Enterprise 32/64bit SP2
 - Windows Server 2008* R2
 - VMWare* 5.1, 5.5
 - Red Hat* Enterprise Linux* 6.3, 6.5, 7.0
 - SUSE* Linux* Enterprise Server 11 SP1, SP3
 - CentOS* 64bit 6.3, 6.5
 - VMWare* 6.0, 6.5
 - Intel® SSD Toolbox with Intel® SSD Optimizer

1. Performance values vary by capacity

2. Performance specifications apply to both compressible and incompressible data

3. 4KB = 4,096 bytes; 8KB = 8,192 bytes.

4. MB/s = 1,000,000 bytes/second

5. Based on JESD218 standard.

6. Based on Random 4KB QD=1 workload, measured as the time taken for 99.9 percentile of commands to finish the round-trip from host to drive and back to host

7. Based on Random 4KB QD=32 workload, measured as the (IOPS in the 99.9th percentile slowest 1-second interval)/(average IOPS during the test)

8. Measurement taken once the workload has reached steady state but including all background activities required for normal operation and data reliability

9. Altitude pressure is simulated in a test chamber; excludes soft error

10. Extended operation at a higher altitude might impact reliability.

11. If both 12V and 5V power supplies are present, defaults to 5V+ 12V power supplies. Does not support 12 volt only.

12. Based on 5V power supply

13. Please contact your Intel representative for details on the non-operating temperature range

Intel may make changes to specifications and product descriptions at any time, without notice. Designers must not rely on the absence or characteristics of any features or instructions marked "reserved" or "undefined." Intel reserves these for future definition and shall have no responsibility whatsoever for conflicts or incompatibilities arising from future changes to them. The information here is subject to change without notice. Do not finalize a design with this information.

Tests document performance of components on a particular test, in specific systems. Differences in hardware, software, or configuration will affect actual performance. Consult other sources of information to evaluate performance as you consider your purchase.

System Configuration for all performance testing: Intel® Xeon® CPU E5-2699v3 @ 2.30GHz on Intel® S2600WT2 motherboard, Intel® C612 Chipset (Intel® DH82029 PCH), BIOS Version SE5C610.86B.01.01.0014.121820151719 32GB DDR4, CentOS* 7, Kernel 4.3.3, FIO* 2.8, Intel® SSD DC S3520 FW N2010018

All documented endurance test results are obtained in compliance with JESD218 Standards; refer to individual sub-sections within this document for specific methodologies. See www.jedec.org for detailed definitions of JESD218 Standards.

The products described in this document may contain design defects or errors known as errata which may cause the product to deviate from published specifications. Current characterized errata are available on request.

Contact your local Intel sales office or your distributor to obtain the latest specifications and before placing your product order.

UBER	Uncorrectable Bit Error Rate

1 Overview

This document describes the specifications and capabilities of the Intel® SSD DC S3520 Series.

The Intel® SSD DC S3520 Series delivers great performance and Quality of Service combined with high reliability for Serial Advanced Technology Attachment (SATA)-based computers in capacities of 150GB, 240GB, 480GB, 800GB, 960GB, 1.2TB and 1.6TB in a 2.5-inch form factor and 150GB, 240GB, 480GB, 760GB, and 960GB in the M.2 form factor

By combining Intel's 3D MLC NAND Flash Memory technology with SATA 6 GB/s interface support, the Intel SSD DC S3520 Series delivers Sequential Read speeds of up to 450 MB/s and Sequential Write speeds of up to 400 MB/s. The Intel SSD DC S3520 Series also delivers Random 4k Read speeds of up to 67,500 IOPS and Random 4K Write speeds of up to 18,000 IOPS, and Quality of Service of 3 ms for random 4KB reads measured at a queue depth of 1.

The industry-standard 2.5-inch and M.2 form factors enable interchangeability with existing hard disk drives (HDDs) and native SATA HDD drop-in replacement with the enhanced performance, reliability, ruggedness, and power savings offered by an SSD.

Intel SSD DC S3520 Series offers these key features:

- Standard Endurance Technology
- High I/O and throughput performance
- Consistent I/O latency
- Tested and Proven power-loss data protection with self-test
- Proven End-to-End data protection, Demonstrated 10^{-17} UBER
- Thermal throttling
- Temperature Sensor
- Inrush current management
- Low power
- High reliability
- Temperature monitor and logging
- <5% Performance Degradation over product life

2 Product Specifications

2.1 Capacity

Table 1: User-Addressable Sectors

Intel SSD DC S3520 Series	Unformatted Capacity (Total User Addressable Sectors in LBA Mode)
240GB	468,862,128
480GB	937,703,088
760GB	1,484,684,208
800GB	1,562,824,368
960GB	1,875,385,008
1.2TB	2,344,225,968
1.6TB	3,125,627,568

Notes:

1GB = 1,000,000,000 bytes; 1 sector = 512 bytes.

LBA count shown represents total user storage capacity and will remain the same throughout the life of the drive.

The total usable capacity of the SSD may be less than the total physical capacity because a small portion of the capacity is used for NAND flash management and maintenance purposes.

2.2 Performance

Table 2: 2.5 Inch Random Read/Write Input/Output Operations Per Second (IOPS)¹

Specification	Unit	Intel SSD DC S3520 Series					
		240GB	480GB	800GB	960GB	1.2TB	1.6TB
Random 4KB Read (up to) ²	IOPS	65,000	65,500	65,500	67,000	67,500	67,500
Random 4KB Write (up to)	IOPS	16,000	16,000	17,000	16,000	17,500	17,000
Random 8KB Read (up to) ³	IOPS	36,000	45,000	43,000	45,000	45,000	45,000
Random 8KB Write (up to)	IOPS	8,000	8,000	9,500	8,000	8,500	8,500
Random 4KB 70/30 Read/Write (up to) ²	IOPS	24,000	26,000	31,500	30,000	33,000	33,000
Random 8KB 70/30 Read/Write (up to) ³	IOPS	13,500	15,000	18,500	17,500	19,000	19,000

Notes:

- Performance measured using FIO* on Linux* with Queue Depth 32. Measurements are performed on a full Logical Block Address (LBA) span of the drive. Performance with different Queue Depths will be provided upon request
- 4KB = 4,096 bytes
- 8KB = 8,192 bytes

**Table 3: M.2 Random Read/Write Input/Output Operations Per Second (IOPS)^{1,2}**

Specification	Unit	Intel SSD DC S3520 Series			
		240GB	480GB	760GB	960GB
Random 4KB Read (up to) ³	IOPS	50,000	52,500	52,800	53,000
Random 4KB Write (up to)	IOPS	14,400	14,400	14,400	14,400
Random 8KB Read (up to) ⁴	IOPS	34,700	37,300	37,600	38,000
Random 8KB Write (up to)	IOPS	7,300	7,300	7,300	7,300
Random 4KB 70/30 Read/Write (up to) ³	IOPS	22,000	24,000	24,000	24,300
Random 8KB 70/30 Read/Write (up to) ⁴	IOPS	12,500	14,000	14,000	14,200

Notes:

1. All values in this table are preliminary and will be updated with production M.2.
2. Performance measured using FIO* on Linux* with Queue Depth 32. Measurements are performed on a full Logical Block Address (LBA) span of the drive. Performance with different Queue Depths will be provided upon request.
3. 4KB = 4,096 bytes
4. 8KB = 8,192 bytes

**Table 4: 2.5-Inch Random Read/Write IOPS Consistency¹**

Specification	Unit	Intel SSD DC S3520 Series					
		240GB	480GB	800GB	960GB	1.2TB	1.6TB
Random 4KB Read (up to) ²	%	98	98	98	98	98	98
Random 4KB Write (up to)	%	85	85	85	85	85	85
Random 8KB Read (up to) ³	%	98	98	98	98	98	98
Random 8KB Write (up to)	%	85	85	85	85	85	85

Notes:

1. Performance consistency measured using FIO* on Linux* based on Random 4KB QD=32 workload, measured as the (IOPS in the 99.9th percentile slowest 1-second interval) / (average IOPS during the test). Measurements are performed on a full Logical Block Address (LBA) span of the drive once the workload has reached steady state but including all background activities required for normal operation and data reliability
2. 4KB = 4,096 bytes
3. 8KB = 8,192 bytes

Table 5: M.2 Random Read/Write IOPS Consistency^{1,2}

Specification	Unit	Intel SSD DC S3520 Series			
		240GB	480GB	760GB	960GB
Random 4KB Read (up to) ³	%	98	99	99	99
Random 4KB Write (up to)	%	90	90	90	90
Random 8KB Read (up to) ⁴	%	97	97	97	97
Random 8KB Write (up to)	%	87	87	87	87

Notes:

1. All values in this table are preliminary and will be updated with production M.2.
2. Performance consistency measured using IOMeter* based on Random 4KB QD=32 workload, measured as the (IOPS in the 99.9th percentile slowest 1-second interval) / (average IOPS during the test). Measurements are performed on a full Logical Block Address (LBA) span of the drive once the workload has reached steady state but including all background activities required for normal operation and data reliability.
3. 4KB = 4,096 bytes
4. 8KB = 8,192 bytes

Table 6: 2.5-Inch Sequential Read and Write Bandwidth¹

Specification	Unit	Intel SSD DC S3520 Series					
		240GB	480GB	800GB	960GB	1.2TB	1.6TB
Sequential Read (SATA 6Gb/s) ¹	MB/s	320	450	450	450	450	450
Sequential Write (SATA 6Gb/s) ¹	MB/s	300	380	380	380	380	380

Note:

1. Performance measured using FIO* on Linux* with 128KB (131,072 bytes) of transfer size with Queue Depth 32.

Table 7: M.2 Sequential Read and Write Bandwidth¹

Specification	Unit	Intel SSD DC S3520 Series			
		240GB	480GB	760GB	960GB
Sequential Read (SATA 6Gb/s) ¹	MB/s	320	410	410	410
Sequential Write (SATA 6Gb/s) ¹	MB/s	260	320	320	320

Note:

1. All values in this table are preliminary and will be updated with production M.2.
2. Performance measured using FIO* on Linux* with 128KB (131,072 bytes) of transfer size with Queue Depth 32.

Table 8: 2.5-Inch and M.2 Latency

Specification	Intel SSD DC S3520 Series	
	2.5"	M.2
	240GB, 480GB, 800GB, 900GB, 1.2TB, 1.6TB	240GB, 480GB, 760GB, 960GB
Latency (TYP) ¹		
Read Sequential/Random	40/160 μ s	TBD
Write Sequential/Random	42/75 μ s	TBD

Note:

1. Device measured using FIO* on Linux*. Latency measured using 4KB (4,096 bytes) transfer size with Queue Depth equal to 1 on a sequential and random workload.

Table 9: 2.5-inch and M.2 Power On to Ready

Specification	Intel SSD DC S3520 Series	
	2.5" & M.2	
	240GB, 480GB	760GB, 800GB, 960GB, 1.2TB, 1.6TB
Power On to Ready ¹	5 s	10 s

Note:

1. Power On To Ready time assumes proper shutdown. Time varies if shutdown is not preceded by STANDBY IMMEDIATE command.

Table 10: Quality of Service for 2.5-inch Form Factor

Specification	Unit	Intel 2.5-inch SSD DC S3520 Series					
		240GB	480GB	800GB	960GB	1.2TB	1.6TB
Quality of Service ^{1,2} (99.9%)							
Reads Queue Depth 1	ms	0.25	0.25	0.25	0.25	0.25	0.25
Reads Queue Depth 32	ms	1.5	1.5	1.5	1.5	1.5	1.5
Writes Queue Depth 1	ms	1.5	1.5	1.5	0.8	0.8	0.8
Writes Queue Depth 32	ms	11	9	7	7	6	6
Quality of Service ^{1,2} (99.9999%)							
Reads Queue Depth 1	ms	8	8	8	8	8	8
Reads Queue Depth 32	ms	10	10	10	10	10	10
Writes Queue Depth 1	ms	13	13	13	13	20	25
Writes Queue Depth 32	ms	30	30	30	30	35	45

Notes:

1. Device measured using FIO* on Linux*. Quality of Service measured using 4KB (4,096 bytes) transfer size on a random workload on a full Logical Block Address (LBA) span of the drive once the workload has reached steady state but including all background activities required for normal operation and data reliability.
2. Based on Random 4KB QD=1, 32 workloads, measured as the time taken for 99.9(or 99.9999) percentile of commands to finish the round-trip from host to drive and back to host.

Table 11: Quality of Service for M.2 Form Factor^{1,2}

Specification	Unit	Intel SSD DC S3520 Series			
		240GB	480GB	760GB	960GB
Quality of Service ^{2,3} (99.9%)					
Reads Queue Depth 1	ms	TBD	TBD	TBD	TBD
Reads Queue Depth 32	ms	TBD	TBD	TBD	TBD
Writes Queue Depth 1	us	TBD	TBD	TBD	TBD
Writes Queue Depth 32	ms	TBD	TBD	TBD	TBD
Quality of Service ^{2,3} (99.9999%)					
Reads Queue Depth 1	ms	TBD	TBD	TBD	TBD
Reads Queue Depth 32	ms	TBD	TBD	TBD	TBD
Writes Queue Depth 1	ms	TBD	TBD	TBD	TBD
Writes Queue Depth 32	ms	TBD	TBD	TBD	TBD

Notes:

1. All values will be updated with production M.2.
2. Device measured using FIO* on Linux*. Quality of Service measured using 4KB (4,096 bytes) transfer size on a random workload on a full Logical Block Address (LBA) span of the drive once the workload has reached steady state but including all background activities required for normal operation and data reliability.
3. Based on Random 4KB QD=1, 32 workloads, measured as the time taken for 99.9(or 99.9999) percentile of commands to finish the round-trip from host to drive and back to host.

2.3 Electrical Characteristics

Table 12: Operating Voltage for 2.5-inch Form Factor

Electrical Characteristics	Intel SSD DC S3520 Series
	240GB, 480GB, 800GB, 960GB, 1.2TB, 1.6TB
5 V Operating Characteristics:	
Operating Voltage range	5 V ($\pm 5\%$)
Rise time (Max/Min)	1 s / 1 ms
Fall time (Min) ¹	5 kV/s
Noise level	500 mV pp 10 Hz – 100 KHz 50 mV pp 100 KHz – 20 MHz
Min Off time ²	500 ms
Inrush Current (Typical Peak) ³	1.5 A, < 1 s
12 V Operating Characteristics:	
Operating Voltage range	12 V ($\pm 10\%$)
Rise time (Max/Min)	1 s / 1 ms
Fall time (Min) ¹	12 kV/s
Noise level	1000 mV pp 10 Hz – 100 KHz 100 mV pp 100 KHz – 20 MHz
Min Off time ²	500 ms
Inrush Current (Typical Peak) ³	1.5 A, < 1 s

Notes:

1. Fall time must be equal or better than minimum in order to guarantee full functionality of enhanced power loss management.
2. The drive must be powered off for at least 500msec before powering on.
3. Measured from initial device power supply application.

Table 13: Operating Voltage for M.2 Form Factor

Electrical Characteristics	Intel SSD DC S3520 Series
	240GB, 480GB, 760GB, 960GB
Operating Voltage range	3.3 V ($\pm 5\%$)
Rise time (Max/Min)	100 ms / 1 ms
Fall time (Min) ¹	3.3 kV/s
Noise level	100 mV pp 10 Hz – 20 MHz
Min Off time ²	500 ms
Inrush Current (Typical Peak) ³	1.5 A, < 1 s

Notes:

1. Fall time must be equal or better than minimum in order to guarantee full functionality of enhanced power loss management.
2. The drive must be powered off for at least 500msec before powering on.
3. Measured from initial device power supply application.

**Table 14: Power Consumption for 2.5-inch Form Factor (5V Supply)**

Specification	Unit	Intel SSD DC S3520 Series					
		240GB	480GB	800GB	960GB	1.2TB	1.6TB
Active Write - RMS Average ¹	W	2.8	3.2	3.5	3.5	3.5	3.5
Active Write - Burst ²	W	4.3	5.8	9.6	9.6	9.6	9.6
Active Read - RMS Average ³	W	2.4	2.9	2.9	3.1	3.1	3.1
Active Read - Burst ⁴	W	3.8	4.7	5	5	5	5
Idle	W	0.5	0.5	0.6	0.6	0.6	0.6

Notes:

1. The workload equates 128 KB (131,072 bytes) Queue Depth equal to 32 sequential writes. RMS (Root Mean Squared) Average Power is measured using Agilent Power Analyzer over a 100 ms sample period.
2. The workload equates 128 KB (131,072 bytes) Queue Depth equal to 32 sequential writes. RMS (Root Mean Squared) Burst Power is measured using Agilent Power Analyzer over a 500 μ s sample period.
3. The workload equates 128 KB (131,072 bytes) Queue Depth equal to 32 sequential reads. RMS (Root Mean Squared) average power is measured using Agilent Power Analyzer over a 100 ms sample period.
4. The workload equates 128 KB (131,072 bytes) Queue Depth equal to 32 sequential reads. RMS (Root Mean Squared) burst power is measured using Agilent Power Analyzer over a 500 μ s sample period.

Table 15: Power Consumption for 2.5-inch Form Factor (5V + 12V Supply)

Specification ¹	Unit	Intel SSD DC S3520 Series											
		240GB		480GB		800GB		960GB		1.2TB		1.6TB	
		5V	12V	5V	12V	5V	12V	5V	12V	5V	12V	5V	12V
Active Write - RMS Average ¹	W	1.6	1.3	1.7	1.55	1.9	1.6	1.9	1.6	1.9	1.6	1.9	1.6
Active Write - Burst ²	W	3.2	2.0	3.2	3.0	3.5	6.3	3.5	7.8	3.5	8.4	3.5	8.4
Active Read - RMS Average ³	W	1.6	0.9	1.7	1.3	1.8	1.3	1.8	1.3	1.9	1.3	1.9	1.3
Active Read - Burst ⁴	W	3	1.2	3.2	1.8	3.5	2.2	3.5	2.2	3.5	2.2	3.5	2.2
Idle	W	0.6	0.04	0.6	0.04	0.6	0.04	0.6	0.07	0.6	0.07	0.6	0.07

Notes:

1. The workload equates 128 KB (131,072 bytes) Queue Depth equal to 32 sequential writes. RMS (Root Mean Squared) Average Power is measured using Agilent Power Analyzer over a 100 ms sample period.
2. The workload equates 128 KB (131,072 bytes) Queue Depth equal to 32 sequential writes. RMS (Root Mean Squared) Burst Power is measured using Agilent Power Analyzer over a 500 μ s sample period.
3. The workload equates 128 KB (131,072 bytes) Queue Depth equal to 32 sequential reads. RMS (Root Mean Squared) average power is measured using Agilent Power Analyzer over a 100 ms sample period.
4. The workload equates 128 KB (131,072 bytes) Queue Depth equal to 32 sequential reads. RMS (Root Mean Squared) burst power is measured using Agilent Power Analyzer over a 500 μ s sample period.

Table 16: Power Consumption for M.2 Form Factor¹

Specification	Unit	Intel SSD DC S3520 Series			
		240GB	480GB	760GB	960GB
Active Write – RMS Average ²	W	TBD	TBD	TBD	TBD
Active Write – Max Burst ³	W	TBD	TBD	TBD	TBD
Active Read – RMS Average ⁴	W	TBD	TBD	TBD	TBD
Active Read – Max Burst ⁵	W	TBD	TBD	TBD	TBD
Idle	W	TBD	TBD	TBD	TBD

Notes:

1. All values will be updated with production M.2.
2. The workload equates 128 KB (131,072 bytes) Queue Depth equal to 32 sequential writes. RMS (Root Mean Squared) Average Power is measured using Agilent Power Analyzer over a 100 ms sample period
3. The workload equates 128 KB (131,072 bytes) Queue Depth equal to 32 sequential writes. RMS (Root Mean Squared) Max Burst power is measured using Agilent Power Analyzer over a 500 μ s sample period
4. The workload equates 128 KB (131,072 bytes) Queue Depth equal to 32 sequential reads. RMS (Root Mean Squared) average power is measured using Agilent Power Analyzer over a 100 ms sample period
5. The workload equates 128 KB (131,072 bytes) Queue Depth equal to 32 sequential reads. RMS (Root Mean Squared) Max Burst power is measured using Agilent Power Analyzer over a 500 μ s sample period

2.4 Environmental Conditions

Table 17: Temperature, Shock, Vibration

Temperature	Range
Case Temperature Operating Non-operating ¹	0 – 70° C -55 – 95° C
Temperature Gradient ² Operating Non-operating	30° C/hr (Typical) 30° C/hr (Typical)
Humidity Operating Non-operating	5 – 95 % 5 – 95 %
Shock and Vibration	Range
Shock ³ Operating Non-operating	1,000 G (Max) at 0.5 ms 1,000 G (Max) at 0.5 ms
Vibration ⁴ Operating Non-operating	2.17 G _{RMS} (5-700 Hz) Max 3.13 G _{RMS} (5-800 Hz) Max

Notes:

1. Contact your Intel representative for details on the non-operating temperature range.
2. Temperature gradient measured without condensation.
3. Shock specifications assume the SSD is mounted securely with the input vibration applied to the drive-mounting screws. Stimulus may be applied in the X, Y or Z axis. Shock specification is measured using Root Mean Squared (RMS) value.
4. Vibration specifications assume the SSD is mounted securely with the input vibration applied to the drive-mounting screws. Stimulus may be applied in the X, Y or Z axis. Vibration specification is measured using RMS value.

2.5 Product Regulatory Compliance

Intel SSD DC S3520 Series meets or exceeds the regulatory or certification requirements listed in the following table:

Table 18: Product Regulatory Compliance Specifications

Title	Description	Region For Which Conformity Declared
TITLE 47-Telecommunications CHAPTER 1— FEDERAL COMMUNICATIONS COMMISSION PART 15 — RADIO FREQUENCY DEVICES ICES-003, Issue 4 Interference-Causing Equipment Standard Digital Apparatus	FCC Part 15B Class B CA/CSA-CEI/IEC CISPR 22:02. This is CISPR 22:1997 with Canadian Modifications	USA Canada
IEC 55024 Information Technology Equipment — Immunity characteristics— Limits and methods of measurement CISPR24:2010	EN-55024: 1998 and its amendments	European Union
IEC 55022 Information Technology Equipment — Radio disturbance Characteristics— Limits and methods of measurement CISPR24:2008 (Modified)	EN-55022: 2006 and its amendments	European Union
EN-60950-1 2 nd Edition	Information Technology Equipment — Safety — Part 1: General Requirements	USA/Canada
UL/CSA EN-60950-1 2 nd Edition	Information Technology Equipment — Safety — Part 1: General Requirements	USA/Canada

2.6 Reliability

Intel SSD DC S3520 Series meets or exceeds SSD endurance and data retention requirements as specified in the JESD218 standard. Reliability specifications are listed in the following table:

Table 19: Reliability Specifications

Parameter	Value
Uncorrectable Bit Error Rate (UBER)	< 1 sector per 10 ¹⁷ bits read
Uncorrectable bit error rate will not exceed one sector in the specified number of bits read. In the unlikely event of a non-recoverable read error, the SSD will report it as a read failure to the host; the sector in error is considered corrupt and is not returned to the host.	
Mean Time Between Failures (MTBF)	2 million hours
Mean Time Between Failures is estimated based on Telcordia* methodology and demonstrated through Reliability Demonstration Test (RDT).	
Power On/Off Cycles	24 per day

Parameter	Value
Power On/Off Cycles is defined as power being removed from the SSD, and then restored. Most host systems remove power from the SSD when entering suspend and hibernate as well as on a system shutdown.	
Insertion Cycles	50 on SATA cable 500 on backplane
SATA/power cable insertion/removal cycles.	
Data Retention	3 months power-off retention once SSD reaches rated write endurance at 40 °C
The time period for retaining data in the NAND at maximum rated endurance.	

Table 20: Endurance Rating

	JEDEC Workload			64K Sequential Write		
Capacities (GB)	Endurance ¹ (Terabyte Written)	DWPD (for 3 yrs.)	DWPD (for 5 yrs.)	Endurance ¹ (Terabyte Written)	DWPD (for 3 yrs.)	DWPD (for 5 yrs.)
240	599	2.27	1.37	1655	6	3.5
480	945	1.80	1.08	3126	6	3.5
800	1663	1.90	1.14	5332	6	3.5
760	1420	1.71	1.02	4140	6	3.5
960	1750	1.66	1.00	6252	6	3.5
1200	2455	1.87	1.12	7907	6	3.5
1600	2925	1.67	1.00	10481	6	3.5

Note:

1. Refer to JESD218 standard table 1 for UBER, FFR and other Enterprise SSD endurance verification requirements. Endurance verification acceptance criterion based on establishing <1E-16 at 60 confidence.

2.7 Temperature Sensor

The Intel® SSD DC S3520 Series has an internal temperature sensor with an accuracy of +/-2C over a range of -20C to +80C which can be monitored using two SMART attributes: Airflow Temperature (BEh) and Device Internal Temperature (C2h). Both attributes report the same temperature value. For more information on supported SMART attributes, see "SMART Attributes" on page 18.

2.8 Power Loss Capacitor Test

The Intel® SSD DC S3520 Series supports testing of the power loss capacitor, which can be monitored using the following SMART attribute: (175, AFh).

2.9 Hot Plug Support

Hot Plug insertion and removal is supported in the presence of a proper connector and appropriate operating system (OS), as described in the SATA 3.2 specification.

This product supports asynchronous signal recovery and issues an unsolicited COMINIT when first mated with a powered connector to guarantee reliable detection by a host system without hardware device detection.

User Data is protected from planned or unplanned power loss by the Enhanced Power Management technology on the Intel® SSD DC S3520 Series.

2.10 Self-Encrypting Drive (SED)

The Intel® SSD DC S3520 Series is a Self-Encrypting Drive (SED), meaning it supports hardware-based full-disk encryption (FDE). AES-256 based encryption is built into the drive and is transparent to the user. Authentication on power-up is done by way of the BIOS or ATA Security Feature Set.

3 Mechanical Information

Figure 1 shows the physical package information for the Intel SSD DC S3520 Series in the 2.5 inch form factors. All dimensions are in millimeters.

Figure 1: Intel SSD DC S3520 Series 2.5-inch Dimensions

Figure 2 shows the physical package information for the Intel SSD DC S3520 Series in the M.2 form factors. All dimensions are in millimeters.

Figure 2: Intel SSD DC S3520 Series M.2 Dimensions

4 Pin and Signal Descriptions

4.1 2.5-inch Form Factor Pin Locations

Figure 3: Layout of 2.5-inch Form Factor Signal and Power Segment Pins

Note: 2.5-inch connector supports built in latching capability.

4.2 Connector Pin Signal Definitions

Table 21: Serial ATA Connector Pin Signal Definitions—2.5-inch Form Factors

Pin	Function	Definition
S1	Ground	1 st mate
S2	A+	Differential signal pair A
S3	A-	
S4	Ground	1 st mate
S5	B-	Differential signal pair B
S6	B+	
S7	Ground	1 st mate

Note: Key and spacing separate signal and power segments.

4.3 Power Pin Signal Definitions

Table 22: Serial ATA Power Pin Definitions—2.5-inch Form Factors

Pin ¹	Function	Definition	Mating Order
P1 ²	Not connected	(3.3V Power)	--
P2 ²	Not connected	(3.3V Power)	--
P3 ²	Not connected	(3.3V Power; pre-charge)	2 nd Mate
P4 ^{3,4}	Ground	Ground	1 st Mate
P5 ³	Ground	Ground	1 st Mate
P6 ³	Ground	Ground	1 st Mate
P7 ^{3,5}	V ₅	5V Power	1 st Mate
P8 ^{3,5}	V ₅	5V Power	2 nd Mate
P9 ^{3,5}	V ₅	5V Power	2 nd Mate
P10 ³	Ground	Ground	1 st Mate
P11 ⁶	DAS	Device Activity Signal	2 nd Mate
P12 ^{3,4}	Ground	Ground	1 st Mate
P13 ⁷	V ₁₂	12V Power	1 st Mate
P14 ⁷	V ₁₂	12V Power	2 nd Mate
P15 ⁷	V ₁₂	12V Power	2 nd Mate

Notes:

- All pins are in a single row, with a 1.27 mm (0.050-inch) pitch.
- Pins P1, P2 and P3 are connected together, although they are not connected internally to the device. The host may put 3.3V on these pins.
- The mating sequence is:
 - ground pins P4-P6, P10, P12 and the 5V power pin P7
 - signal pins and the rest of the 5V power pins P8-P9
- Ground connectors P4 and P12 may contact before the other 1st mate pins in both the power and signal connectors to discharge ESD in a suitably configured backplane connector.
- Power pins P7, P8, and P9 are internally connected to one another within the device.
- The host may ground P11 if it is not used for Device Activity Signal (DAS).
- Pins P13, P14 and P15 are internally connected to one another within the device. The host may put 12V on these pins.

5 Supported Command Sets

The Intel SSD DC S3520 Series supports all mandatory ATA (Advanced Technology Attachment) commands defined in the ATA8-ACS3 REV5F specification described in this section.

5.1 ATA General Feature Command Set

The Intel SSD DC S3520 Series supports the ATA General Feature command set (non- PACKET), which consists of:

- EXECUTE DEVICE DIAGNOSTIC
- SET FEATURES
- IDENTIFY DEVICE

Note: See Appendix A, "IDENTIFY DEVICE Command Data" for details on the sector data returned after issuing an IDENTIFY DEVICE command.

The Intel® SSD DC S3520 Series also supports the following optional commands:

- READ DMA
- WRITE DMA
- READ SECTOR(S)
- READ VERIFY SECTOR(S)
- READ MULTIPLE
- SEEK
- SET FEATURES
- WRITE SECTOR(S)
- SET MULTIPLE MODE¹
- WRITE MULTIPLE
- FLUSH CACHE
- READ BUFFER
- WRITE BUFFER
- NOP
- DOWNLOAD MICROCODE
- WRITE UNCORRECTABLE EXT

1. The only multiple supported will be multiple 1

5.2 Power Management Command Set

The Intel SSD DC S3520 Series supports the Power Management command set, which consists of:

- CHECK POWER MODE
- IDLE
- IDLE IMMEDIATE
- SLEEP
- STANDBY
- STANDBY IMMEDIATE

5.3 Security Mode Feature Set

The Intel SSD DC S3520 Series supports the Security Mode command set, which consists of:

- SECURITY SET PASSWORD
- SECURITY UNLOCK
- SECURITY ERASE PREPARE
- SECURITY ERASE UNIT
- SECURITY FREEZE LOCK
- SECURITY DISABLE PASSWORD

5.4 SMART Command Set

The Intel SSD DC S3520 Series supports the SMART command set, which consists of:

- SMART READ DATA
- SMART READ ATTRIBUTE THRESHOLDS
- SMART ENABLE/DISABLE ATTRIBUTE AUTOSAVE
- SMART SAVE ATTRIBUTE VALUES
- SMART EXECUTE OFF-LINE IMMEDIATE
- SMART READ LOG SECTOR
- SMART WRITE LOG SECTOR
- SMART ENABLE OPERATIONS
- SMART DISABLE OPERATIONS
- SMART RETURN STATUS
- SMART ENABLE/DISABLE AUTOMATIC OFFLINE

5.4.1 Attributes

The following table lists the SMART attributes supported by the Intel SSD DC S3520 Series and the corresponding status flags and threshold settings.

Table 24: SMART Attributes

ID	Attribute	Status Flags						Threshold
		SP	EC	ER	PE	OC	PW	
05h	Re-allocated Sector Count The raw value of this attribute shows the number of retired blocks since leaving the factory (grown defect count).	1	1	0	0	1	0	0 (none)
09h	Power-On Hours Count The raw value reports power-on time, cumulative over the life of the SSD, integer number in hour time units.	1	1	0	0	1	0	0 (none)
0Ch	Power Cycle Count The raw value of this attribute reports the cumulative number of power cycle events over the life of the device.	1	1	0	0	1	0	0 (none)
AAh	Available Reserved Space (See Attribute E8)	1	1	0	0	1	1	10

ID	Attribute	Status Flags						Threshold
		SP	EC	ER	PE	OC	PW	
ABh	Program Fail Count The raw value of this attribute shows total count of program fails and the normalized value, beginning at 100, shows the percent remaining of allowable program fails.	1	1	0	0	1	0	0 (none)
ACh	Erase Fail Count The raw value of this attribute shows total count of erase fails and the normalized value, beginning at 100, shows the percent remaining of allowable erase fails.	1	1	0	0	1	0	0 (none)
AEnh	Unexpected Power Loss Also known as "Power-off Retract Count" per magnetic-drive terminology. Reports number of unclean shutdowns, cumulative over the life of the SSD. An "unclean shutdown" is the removal of power without STANDBY IMMEDIATE as the last command (regardless of PLI activity using capacitor power).	1	1	0	0	1	0	0 (none)
AFh	Power Loss Protection Failure Last test result as microseconds to discharge cap, saturates at max value. Also logs minutes since last test and lifetime number of tests. Bytes 0-1: Last test result as microseconds to discharge cap, saturates at max value. Test result expected in range 25 <= result <= 5000000, lower indicates specific error code Bytes 2-3: Minutes since last test, saturates at max value. Bytes 4-5: Lifetime number of tests, not incremented on power cycle, saturates at max value.	1	1	0	0	1	1	10
B7h	SATA Downshift Count The count of the number of times SATA interface selected lower signaling rate due to error.	1	1	0	0	1	0	0 (none)
B8h	End-to-End Error Detection Count <i>Raw value:</i> reports number of LBA tag mismatches in end-to-end data protection path. <i>Normalized value:</i> always 100.	1	1	0	0	1	1	90
BBh	Uncorrectable Error Count The raw value shows the count of errors that could not be recovered using Error Correction Code (ECC). <i>Normalized value:</i> always 100.	1	1	0	0	1	0	0 (none)
BEh	Case Temperature - Reports the SSD case temperature. Same values as reported in the attribute C2h. Raw value suggests 100 - case temperature in C degrees.	1	0	0	0	1	0	0 (none)
C0h	Power-Off Retract Count (Unsafe Shutdown Count) The raw value of this attribute reports the cumulative number of unsafe (unclean) shutdown events over the life of the device. An unsafe shutdown occurs whenever the device is powered off without STANDBYIMMEDIATE being the last command.	1	1	0	0	1	0	0 (none)

ID	Attribute	Status Flags						Threshold
		SP	EC	ER	PE	OC	PW	
C2h	Temperature - Device Internal Temperature Reports internal temperature of the SSD. Temperature reading is the value direct from the printed circuit board (PCB) sensor without offset.	1	0	0	0	1	0	0 (none)
C5h	Pending Sector Count Number of current unrecoverable read errors that will be re-allocated on next write.	0	1	0	0	1	0	0 (none)
C7h	CRC Error Count The total number of encountered SATA interface cyclic redundancy check (CRC) errors.	1	1	1	1	1	0	0 (none)
E1h	Host Writes The raw value of this attribute reports the total number of sectors written by the host system. The raw value is increased by 1 for every 65,536 sectors (32MB) written by the host.	1	1	0	0	1	0	0 (none)
E2h	Timed Workload Media Wear Measures the wear seen by the SSD (since reset of the workload timer, attribute E4h), as a percentage of the maximum rated cycles.	1	1	0	0	1	0	0 (none)
E3h	Timed Workload Host Read/Write Ratio Shows the percentage of I/O operations that are read operations (since reset of the workload timer, attribute E4h).	1	1	0	0	1	0	0 (none)
E4h	Timed Workload Timer Measures the elapsed time (number of minutes since starting this workload timer).	1	1	0	0	1	0	0 (none)
E8h	Available Reserved Space This attribute reports the number of reserve blocks remaining. The normalized value begins at 100 (64h), which corresponds to 100 percent availability of the reserved space. The threshold value for this attribute is 10 percent availability.	1	1	0	0	1	1	10
E9h	Media Wearout Indicator This attribute reports the number of cycles the NAND media has undergone. The normalized value declines linearly from 100 to 1 as the average erase cycle count increases from 0 to the maximum rated cycles. Once the normalized value reaches 1, the number will not decrease, although it is likely that significant additional wear can be put on the device.	1	1	0	0	1	0	0 (none)

ID	Attribute	Status Flags						Threshold
		SP	EC	ER	PE	OC	PW	
EAh	Thermal Throttle Status Reports Percent Throttle Status and Count of events Byte 0 = Throttling status. Decimal value 0 = No Throttle Applied, 100 = 100% throttling applied. Intermediate percentages are supported. A value larger than 100d is invalid. Bytes 1-4 = Throttling event count. 32 bit counter indicates the number of times thermal throttle has activated. Value is preserved over power cycles. Byte 5 = Reserved	1	1	0	0	1	0	0 (none)
F1h	Total LBAs Written The raw value of this attribute reports the total number of sectors written by the host system. The raw value is increased by 1 for every 65,536 sectors (32MB) written by the host.	1	1	0	0	1	0	0 (none)
F2h	Total LBAs Read The raw value of this attribute reports the total number of sectors read by the host system. The raw value is increased by 1 for every 65,536 sectors (32MB) read by the host.	1	1	0	0	1	0	0 (none)
F3h	Total Bytes Written The raw value of this attribute reports the total number of sectors written to the NAND media. This includes NAND writes triggered by host writes, defrag, background data refresh and wear level relocation writes etc. The raw value is increased by 1 for every 65,536 sectors (32MB) writes to the NAND media. Upon NAND write, new value returned once per minute.	1	1	0	0	1	0	0 (none)

Table 25: SMART Attribute Status Flags

Status Flag	Description	Value = 0	Value = 1
SP	Self-preserving attribute	Not a self-preserving attribute	Self-preserving attribute
EC	Event count attribute	Not an event count attribute	Event count attribute
ER	Error rate attribute	Not an error rate attribute	Error rate attribute
PE	Performance attribute	Not a performance attribute	Performance attribute
OC	Online collection attribute	Collected only during offline activity	Collected during both offline and online activity
PW	Pre-fail warranty attribute	Advisory	Pre-fail

5.4.2 Timed Workload Endurance Indicators

Timed Workload Media Wear Indicator — ID E2h

This attribute tracks the drive wear seen by the device during the last wear timer loop, as a percentage of the maximum rated cycles. This value should be divided by 1024 to get the percentage.

For example: if the raw value is 4455, the percentage is $4455/1024 = 4.35\%$. The raw value is held at FFFFh until the wear timer (attribute E4h) reaches 60 (minutes) after a SMART EXECUTE OFFLINE IMMEDIATE (B0h/D4h) subcommand 40h to the SSD. The normalized value is always set to 100 and should be ignored.

Timed Workload Host Reads Percentage — ID E3h

This attribute shows the percentage of I/O operations that are read operations during the last workload timer loop. The raw value tracks this percentage and is held at FFFFh until the workload timer (attribute E4h) reaches 60 (minutes). The normalized value is always set to 100 and should be ignored.

Workload Timer — ID E4h

This attribute is used to measure the time elapsed during the current workload. The attribute is reset when a SMART EXECUTE OFFLINE IMMEDIATE (D4h) subcommand 40h is issued to the drive. The raw value tracks the time in minutes and has a maximum value of $2^{32} = 4,294,967,296$ minutes (8,171 years). The normalized value is always set to 100 and should be ignored.

User Notes

- Sending a SMART EXECUTE OFFLINE IMMEDIATE (B0h/D4h) subcommand 40h to the SSD resets and starts all three attributes (Media Wear Indicator, Attribute E2h, Host Reads Percentage, Attribute E3h, and the Workload timer, Attribute E4h) to FFFFh.
- The Attribute raw values are held at FFFFh until the Workload timer (Attribute E4h) reaches a total of 60 (minutes) of power on time. After 60 minutes, the Timed Workload data is made available.
- After the Workload timer (E4h) reaches 60 (minutes), the Timed Workload data is saved every minute so only 59 seconds of data is lost if power is removed without receiving ATA STANDBY IMMEDIATE. Accumulated data is not reset due to power loss.
- Upon power up, the attributes hold a snapshot of their last saved values for 59 seconds and live data is available after 60 seconds, once the initial one hour interval is completed.

Example Use Cases

The Timed Workload Endurance attributes described in this section are intended to be used to measure the amount of media wear that the drive is subjected to during a timed workload.

Ideally, the system that the drive is being used in should be capable of issuing SMART commands. Otherwise, provisions have been provided to allow the media wear attributes to be persistent so the drive can be moved to a SMART capable system to read out the drive wear attribute values.

Use Case 1 – With a System Capable of SMART Commands

1. On a SMART capable system, issue the SMART EXECUTE OFF-LINE IMMEDIATE (D4h) sub-command 40h to reset the drive wear attributes.
2. Run the workload to be evaluated for at least 60 minutes. Otherwise the drive wear attributes will not be available.
3. Read out the drive wear attributes with the SMART READ DATA (D0h) command.

Use Case 2 – With a System Not Capable of SMART Commands

1. On a SMART capable system, issue the SMART EXECUTE OFF-LINE IMMEDIATE (D4h) sub-command 40h to reset the drive wear attributes.
2. Move the drive to the system where the workload will be measured (and not capable of SMART commands).
3. Run the workload to be evaluated for at least 60 minutes. Otherwise the drive wear attributes will not be available.
4. Do a clean system power down by issuing the ATA STANDBY IMMEDIATE command prior to shutting down the system. This will store all the drive wear SMART attributes to persistent memory within the drive.
5. Move the drive to a SMART capable system.
6. Read out the drive wear attributes with the SMART READ DATA (D0h) command within 59 seconds after power-up.

Example Calculation of Drive Wear

The following is an example of how the drive wear attributes can be used to evaluate the impact of a given workload. The Host Writes SMART attribute (E1h) can also be used to calculate the amount of data written by the host during the workload by reading this attribute before and after running the workload. This example assumes that the steps shown in “Example Use Cases” on page 18 were followed to obtain the following attribute values:

- Timed Workload Media Wear (E2h) has a raw value of 16. Therefore, the percentage wear = $16/1024 = 0.016\%$.
- Timed Workload Host Read/Write Ratio (E3h) has a normalized value of 80, indicating that 80% of operations were reads.
- Workload Timer (E4h) has a raw value of 500. Therefore the workload ran for 500 minutes.
- Host Writes Count (E1h) had a raw value of 100,000 prior to running the workload and a value of 130,000 at the end of the workload. Therefore, the number of sectors written by the host during the workload was $30,000 * 65,535 = 1,966,050,000$ sectors or $1,966,050,000 * 512/1,000,000,000 = 1,007$ GB.

The following conclusions can be made for this example case:

The workload took 500 minutes to complete with 80% reads and 20% writes. A total of 1,007 GB of data was written to the device, which increased the media wear in the drive by 0.016%. At this point in time, this workload is causing a wear rate of 0.016% for every 500 minutes, or 0.00192%/hour.

5.4.3 SMART Logs

The Intel SSD DC S3520 Series implements the following Log Addresses: 00h, 02h, 03h, 06h, and 07h.

The DC S3520 Series implements host vendor specific logs (addresses 80h-9Fh) as read and write scratchpads, where the default value is zero (0). Intel SSD DC S3520 does not write any specific values to these logs unless directed by the host through the appropriate commands.

The DC S3520 Series also implements a device vendor specific log at address A9h as a read-only log area with a default value of zero (0). Besides that, the DC S3520 Series also implements log address B8h (if the drive is in disable logical mode, log address B8h will have a failure code). Finally, the DC S3520 Series also implements log at addresses B9h and BAh (both of them are Intel error logs, and read only for customers).

5.5 Device Statistics

In addition to the SMART attribute structure, statistics pertaining to the operation and health of the Intel SSD DC S3520 Series can be reported to the host on request through the Device Statistics log as defined in the ATA specification.

The Device Statistics log is a read-only GPL/SMART log located at read log address 0x04 and is accessible using READ LOG EXT, READ LOG DMA EXT or SMART READ LOG commands.

The following table lists the Device Statistics supported by the Intel SSD DC S3520 Series.

Table 26: Device Statistics

Page	Offset	Description	Equivalent SMART attribute (if applicable)
0x00	--	List of Supported Pages	--
0x01 – General Statistics	0x08	Power Cycle Count	0Ch
	0x10	Power-On Hours	09h
	0x18	Logical Sectors Written	E1h
	0x20	Num Write Commands – incremented by one for every host write	--
	0x28	Logical Sectors Read	F2h
	0x30	Num Read Commands – incremented by one for every host read	--
0x04 – General Error Statistics	0x08	Num Reported Uncorrectable Errors	BBh
	0x10	Num Resets Between Command Acceptance and Completion	--
0x05 – Temperature Statistics	0x00	Device Statistics Information Header	--
	0x08	Current Temperature	--
	0x10	Average Short Term Temperature	--
	0x18	Average Long Term Temperature	--
	0x20	Highest Temperature	--
	0x28	Lowest Temperature	--
	0x30	Highest Average Short Term Temperature	--
	0x38	Lowest Average Short Term Temperature	--
	0x40	Highest Average Long Term Temperature	--
	0x48	Lowest Average Long Term Temperature	--
	0x50	Time in Over-Temperature	--
	0x58	Specified Maximum Operating Temperature	--
	0x60	Time in Under-Temperature	--
	0x68	Specified Minimum Operating Temperature	--
0x06 – Transport Statistics	0x08	Number of Hardware Resets	--
	0x10	Number of ASR Events	--
	0x18	Number of Interface CRC Errors	--
0x07 – Solid State Device Statistics	0x08	Percentage Used Endurance Indicator	E9h Note: This device statistic counts from 1 to 150

5.6 SMART Command Transport (SCT)

With SMART Command Transport (SCT), a host can send commands and data to an SSD and receive status and data from an SSD using standard write/read commands to manipulate two SMART Logs:

- Log Address E0h ("SCT Command/Status") — used to send commands and retrieve status
- Log Address E1h ("SCT Data Transfer") — used to transport data

Intel SSD DC S3520 supports the following standard SCT actions:

- Write Same — DC S3520 Series implements this action code as described in the ATA specification.
- Error Recovery Control — DC S3520 Series accepts this action code, and will store and return error-recovery time limit values.
- Feature Control - DC S3520 Series supports feature code 0001h (write cache) feature code 0002h (write cache reordering), and feature code 0003h (time interval for temperature logging). It also supports D000h (Power Safe Write Cache capacitor test interval), D001h (read/write power governor mode), D002h (read thermal governor mode), D003h (read power governor burst power), and D004h (read power governor average power).
- Data table command - DC S3520 Series supports data table command as specified in ATA8-ACS3 REV5. This will read out temperature logging information in table ID 0002h.
- Read Status Support - DC S3520 supports read status log
- By using SCT command 0xD801 with State=0, Option=1, ID Word 106 can be changed from 0x6003 to 0x4000 (4KB physical sector size to 512B physical sector size support change).

5.7 Data Set Management Command Set

Intel SSD DC S3520 Series supports the Data Set Management command set Trim attribute, which consists of:

- DATA SET MANAGEMENT

5.8 Accessible Max Address Configuration Command Set

Intel SSD DC S3520 Series supports the Accessible Max Address Configuration Command set, which consists of:

- GET NATIVE MAX ADDRESS EXT
- SET ACCESSIBLE MAX ADDRESS EXT
- FREEZE ACCESSIBLE MAX ADDRESS EXT

5.9 48-Bit Address Command Set

Intel SSD DC S3520 Series supports the 48-bit Address command set, which consists of:

- FLUSH CACHE EXT
- READ DMA EXT
- READ NATIVE MAX ADDRESS EXT
- READ SECTOR(S) EXT
- READ VERIFY SECTOR(S) EXT
- SET MAX ADDRESS EXT
- WRITE DMA EXT
- WRITE MULTIPLE EXT
- WRITE SECTOR(S) EXT
- WRITE MULTIPLE FUA EXT
- WRITE DMA FUA EXT

5.10 General Purpose Log Command Set

Intel SSD DC S3520 Series supports the General Purpose Log command set, which consists of:

- READ LOG EXT
- WRITE LOG EXT

5.11 Native Command Queuing

Intel SSD DC S3520 Series supports the Native Command Queuing (NCQ) command set, which includes:

- READ FPDMA QUEUED
- WRITE FPDMA QUEUED

Note: With a maximum Queue Depth set to 32.

5.12 Software Settings Preservation

Intel SSD DC S3520 Series supports the SET FEATURES parameter to enable/disable the preservation of software settings.

6 Certifications and Declarations

The following table describes the Device Certifications supported by the Intel SSD DC S3520 Series.

Table 27: Device Certifications and Declarations

Certification	Description
CE Compliant	Low Voltage DIRECTIVE 2006/95/EC OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL of 12 December 2006, and EMC Directive 2004/108/EC OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL of 15 December 2004.
UL Recognized	Underwriters Laboratories, Inc. Bi-National Component Recognition; UL 60950-1, 2nd Edition, 2007-03-27 (Information Technology Equipment - Safety - Part 1: General Requirements) CSA C22.2 No. 60950-1-07, 2nd Edition, 2007-03 (Information Technology Equipment - Safety - Part 1: General Requirements)
C-Tick Compliant	Compliance with the Australia/New Zealand Standard AS/NZS3548 and Electromagnetic Compatibility (EMC) Framework requirements of the Australian Communication Authority (ACA).
BSMI Compliant	Compliance to the Taiwan EMC standard CNS 13438: Information technology equipment - Radio disturbance Characteristics - limits and methods of measurement, as amended on June 1, 2006, is harmonized with CISPR 22: 2005.04.
KCC	Compliance with paragraph 1 of Article 11 of the Electromagnetic Compatibility Control Regulation and meets the Electromagnetic Compatibility (EMC) Framework requirements of the Radio Research Laboratory (RRL) Ministry of Information and Communication Republic of Korea.
VCCI	Voluntary Control Council for Interface to cope with disturbance problems caused by personal computers or facsimile.
RoHS Compliant	Restriction of Hazardous Substance Directive
WEEE	Directive on Waste Electrical and Electronic Equipment

Appendix A: IDENTIFY DEVICE Command Data

Table 29: Returned Sector Data

Word	F = Fixed V = Variable X = Both	Default Value	Description
0	X	0040h	General configuration bit-significant information
1	X	3FFFh	Obsolete - Number of logical cylinders (16,383)
2	V	C837h	Specific configuration
3	X	0010h	Obsolete - Number of logical heads (16)
4-5	X	0h	Retired
6	X	003Fh	Obsolete - Number of logical sectors per logical track (63)
7-8	V	0h	Reserved for assignment by the CompactFlash* Association (CFA)
9	X	0h	Retired
10-19	F	varies	Serial number (20 ASCII characters)
20-21	X	0h	Retired
22	X	0h	Obsolete
23-26	F	varies	Firmware revision (8 ASCII characters)
27-46	F	varies	Model number (Intel® Solid-State Drive)
47	F	8001h	7:0—Maximum number of sectors transferred per interrupt on multiple commands
48	F	4000h	Trusted Computing Feature Set
49	F	2F00h	Capabilities
50	F	4000h	Capabilities
51-52	X	0h	Obsolete
53	F	0006h	Words 88 and 70:64 valid
54	X	3FFFh	Obsolete - Number of logical cylinders (16,383)
55	X	0010h	Obsolete - Number of logical heads (16)
56	X	003Fh	Obsolete - Number of logical sectors per logical track (63)
57-58	X	FC100FBh	Obsolete
59	F	FD01h	Number of sectors transferred per interrupt on multiple commands
60-61	V	240GB: 0FFFFFFFh 480GB: 0FFFFFFFh 800GB: 0FFFFFFFh 960GB: 0FFFFFFFh 1200GB: 0FFFFFFFh 1600GB: 0FFFFFFFh	Total number of user-addressable sector for 28-bit commands
62	X	0h	Obsolete
63	X	0007h	Multi-word DMA modes supported/selected
64	F	0003h	PIO modes supported
65	F	0078h	Minimum multiword DMA transfer cycle time per word
66	F	0078h	Manufacturer's recommended multiword DMA transfer cycle time
67	F	0078h	Minimum PIO transfer cycle time without flow control
68	F	0078h	Minimum PIO transfer cycle time with IORDY flow control
69	F	403Ch	Additional Supported
70	F	0000h	Reserved
71-74	F	0h	Reserved for IDENTIFY PACKET DEVICE command

Word	F = Fixed V = Variable X = Both	Default Value	Description
75	F	001Fh	Queue depth
76	F	850Eh	Serial ATA capabilities
77	F	0006h	Reserved for future Serial ATA definition
78	F	0040h	Serial ATA features supported
79	V	0040h	Serial ATA features enabled
80	F	07FCh	Major version number
81	F	006Dh	Minor version number
82	F	706Bh	Command set supported
83	F	7401h	Command sets supported
84	F	6163h	Command set/feature supported extension
85	X	7069h	Command set/feature enabled
86	X	B401h	Command set/feature enabled
87	X	6163h	Command set/feature default
88	X	407Fh	Ultra DMA Modes
89	F	0002h	Time required for security erase unit completion
90	F	0002h	Time required for enhanced security erase completion
91	V	0h	Current advanced power management value
92	V	0FFFEh	Master Password Revision Code
93	X	0h	Hardware reset result: the contents of bits (12:0) of this word shall change only during the execution of a hardware reset
94	V	0h	Vendor's recommended and actual acoustic management value
95	F	0h	Stream minimum request size
96	V	0h	Streaming transfer time - DMA
97	V	0h	Streaming access latency - DMA and PIO
98-99	F	0h	Streaming performance granularity
100-103	V	240GB: 1BF244B0h 480GB: 37E436B0h 800GB: 5D26CEB0h 960GB: 6FC81AB0h 1200GB: 8BBA0CB0h 1600GB: BA4D4AB0h	Maximum user LBA for 48-bit address feature set
104	V	0h	Streaming transfer time - PIO
105	V	0004h	Maximum number of 512-byte blocks of LBA Range Entries per DATA SET MANAGEMENT command
106	F	6003h	Physical sector size / logical sector size – User Changeable by SCT command to report 512B
107	F	0h	Inter-seek delay for ISO-7779 acoustic testing in microseconds
108-111	F	varies	Unique ID
112-115	F	0h	Reserved for worldwide name extension to 128 bits
116	V	0h	Reserved for technical report
117-118	F	0h	Words per logical sector
119	F	415Ch	Supported settings
120	X	411Ch	Command set/feature enabled/supported
121-126	F	0h	Reserved
127	X	0h	Removable Media Status Notification feature set support
128	X	0021h	Security status

Word	F = Fixed V = Variable X = Both	Default Value	Description
129	V	001Ch	Vendor-specific
130-139	X	0h	Vendor-specific
140-149	X	0h	Disable Logical Errors Field
150-159	X	0h	Vendor-specific
160	X	0h	CompactFlash Association (CFA) power mode 1
161-167	X	0h	Reserved for assignment by the CFA
168	X	0003h	Reserved for assignment by the CFA
169	X	0001h	Data set management Trim attribute support
170-175	F	0h	Reserved for assignment by the CFA
176-205	V	Varies	Current media serial number
206	X	003Dh	SCT Command Transport
207-208	F	0000h	Reserved
209	X	4000h	Alignment of logical blocks within a physical block
210-211	V	0000h	Write-Read-Verify Sector Count Mode 3 (DWord)
212-213	F	0000h	Write-Read-Verify Sector Count Mode 2 (DWord)
214	X	0000h	NV Cache Capabilities
215-216	V	0000h	NV Cache Size in Logical Blocks (DWord)
217	F	0001h	Nominal media rotation rate
218	V	0000h	Reserved
219	F	0000h	NV Cache Options
220	V	0000h	Write-Read-Verify feature set
221	X	0000h	Reserved
222	F	107Fh	Transport major version number
223	F	0000h	Transport minor version number
224-229	F	0000h	Reserved
230-233	X	240GB: 1BF244B0h 480GB: 37E436B0h 800GB: 5D26CEB0h 960GB: 6FC81AB0h 1200GB: 8BBA0CB0h 1600GB: BA4D4AB0h	Extended Number of User Addressable Sectors (QWord)
234	F	0001h	Minimum number of 512-byte data blocks per DOWNLOAD MICROCODE command for mode 03h
235	F	FFFFh	Maximum number of 512-byte data blocks per DOWNLOAD MICROCODE command for mode 03h
236-254	X	0000h	Reserved
255	V	Varies	Integrity word

Notes:

F = Fixed. The content of the word is fixed and does not change. For removable media devices, these values may change when media is removed or changed.

V = Variable. The state of at least one bit in a word is variable and may change depending on the state of the device or the commands executed by the device.

X = F or V. The content of the word may be fixed or variable.
