AirborneM2M industrial wireless access points are built for networking equipment in an array of machine-to-machine (M2M) applications. AirborneM2M[™] access points feature industrial strength packaging and a wide temperature rating (-40 to +85°C) to withstand challenging M2M environments.

Combination Access Point and Client Capability

AirborneM2M access points enable M2Mequipment to create a self sufficient Wi-Fi network and provide easy access to equipment data or resources from Wi-Fi enabled devices. The product also has the capability to be switched from an access point to a client; supporting dual RS-232/422/485 serial ports or a single 10/100 Mbps Ethernet port. The Ethernet port can be placed into either router mode or bridge mode.

Dual-Band Wi-Fi

AirborneM2M products establish wireless connections over 2.4 GHz or 5 GHz bands. Whenever the 2.4 GHz airspace is overcrowded with competing wireless transmission, AirborneM2M products can be switched over to 5 GHz band to keep data flowing.

Enterprise Class Security

Security protocols are important to mission critical wireless M₂M applications. AirborneM₂M access point's multi-layer security addresses the requirements of Enterprise-class networks and corporate IT departments. These advanced security features include wireless security (802.11i/WAP2 enterprise), authentication security using WPA2 (AES-CCMP) and device security (multi-layered encryption). AirborneM₂M access points include a fully functional DHCP server to provide unique addresses for each authenticated client. Up to 10 clients can be supported on the local Wi-Fi network.
