

SPSPFE3-XX

208Vac Power Shelf

SPSPFE3-XX power-shelf solutions provide rectification, system management, and power distribution, while maintaining high reliability and offering flexibility for future expansion.

The power shelf can be configured with up to six hot-swap capable PFE3000-12-069RA AC/DC-DC power supplies that convert 3-phase (3W+PE) AC mains power into a main output of 12 VDC for powering intermediate bus architectures (IBA) in high performance and reliability servers, routers, and network switches.

The shelf is compatible with the Open Compute Rack Design.

The shelf has an optional slot for Network Attached Controller for providing control functions and monitoring through a 10/100 MB base Ethernet port and can be connected directly to the data center management network.

Key Features & Benefits

- Two 3-Phase inputs (3W+PE), one AC inlet powers 3 power modules.
- Modules are hot-swap capable.
- Modules support I²C communication interface for control, programming and monitoring with Power Management Bus protocol.
- Modules implement the following protections: Overtemperature, output overvoltage and output overcurrent.
- RoHS Compliant.
- Available for OCP V1 and V2 bus-bar style connection.

Applications

- High Performance Servers
- Routers
- Switches

1. ORDERING INFORMATION

MODEL	INPUT AND OUTPUT CONFIGURATION
SPSPFE3-09	3-phase, 208-240 VAC Line to Line input 3 sets of output blades for +12 VDC output (each set of blades has max.585 A)
SPSPFE3-09C	3-phase, 208-240 VAC Line to Line input 3 sets of output blades for +12 VDC output (each set of blades has max.585 A) Network Attached Controller included
SPSPFE3-10	3-phase, 208-240 VAC Line to Line input 1 set of output blade for +12 VDC output, Straight Bus bar
SPSPFE3-10C	3-phase, 208-240 VAC Line to Line input 1 set of output blade for +12 VDC output, Straight Bus bar Network Attached Controller included
SPSPFE3-11	3-phase, 208-240 VAC Line to Line input 1 set of output blade for +12 VDC output, Offset Bus bar
SPSPFE3-11C	3-phase, 208-240 VAC Line to Line input 1 set of output blade for +12 VDC output, Offset Bus bar Network Attached Controller included

2. TECHNICAL DATA

PARAMETER	DESCRIPTION / CONDITION
Input	3-phase, 208-240 VAC Line to Line input.
AC Inlet Configuration	3 power modules are powered from one AC inlet.
Auxiliary AC Outlet	3pcs. low power AC outlet providing 208 VAC output with max. 4 A line current. Protected by T 10A / 500 VAC Fuse (serviceable) When T _A : +45 °C to +55 °C, Output load current must be derated to 75%.
Redundant Configuration	3+3 or 5+1 configuration
Rated Power 1	8700 W (3+3 configuration) ¹
Rated Power 2	14400 W (5+1 configuration) ¹
Output Connection	SPSPFE3-09: 3 sets of output blades for +12 VDC output (each set of blades has max.585 A) SPSPFE3-10: 1 set of output blade for +12 VDC output, Straight Bus bar SPSPFE3-11: 1 set of output blade for +12 VDC output, Offset Bus bar
Standby Output	60 W (Standby output 12 V / 5 A)
Communication	I ² C Power Management Bus
NAC1006-01	Network Attached Controller: Ethernet – SNMPv3 / HTTP

3. SAFETY WARNING

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user indemnifies Bel Power Solutions Inc. from all claims arising from the handling or use of the goods. Persons handling the product(s) must have electronics training and observe good engineering practice standards.

CAUTION: Multiple power source. Disconnect all power cords before servicing.

¹ Rated Power is reduced as per current share accuracy characteristic. See PFE3000-12-069RA Datasheet.

5. OVERVIEW

The SPSPFE3-XX Power Shelf is a 10U height power shelf. It can be configured with up to six hot-swap capable PFE3000-12-069RA AC/DC-DC power supplies that convert standard AC mains power into a main output of 12 VDC for powering intermediate bus architectures (IBA) in high performance and reliability servers, routers, and network switches.

The I²C communication is routed through an I²C Multiplexer (NXP PCA9547PW). PSU Modules support I²C communication interface for control, programming and monitoring with the Power Management Bus protocol.

The shelf has a slot for network attached controller (NAC) for providing control functions and monitoring through a 10/100 MB base Ethernet port and can be connected directly to the data center management network. It is hot-pluggable and supplied via the 12 V standby provided by the power supplies in the shelf. The controller can be configured through a web interface; the monitoring and control functions are accessed through SNMPv3.

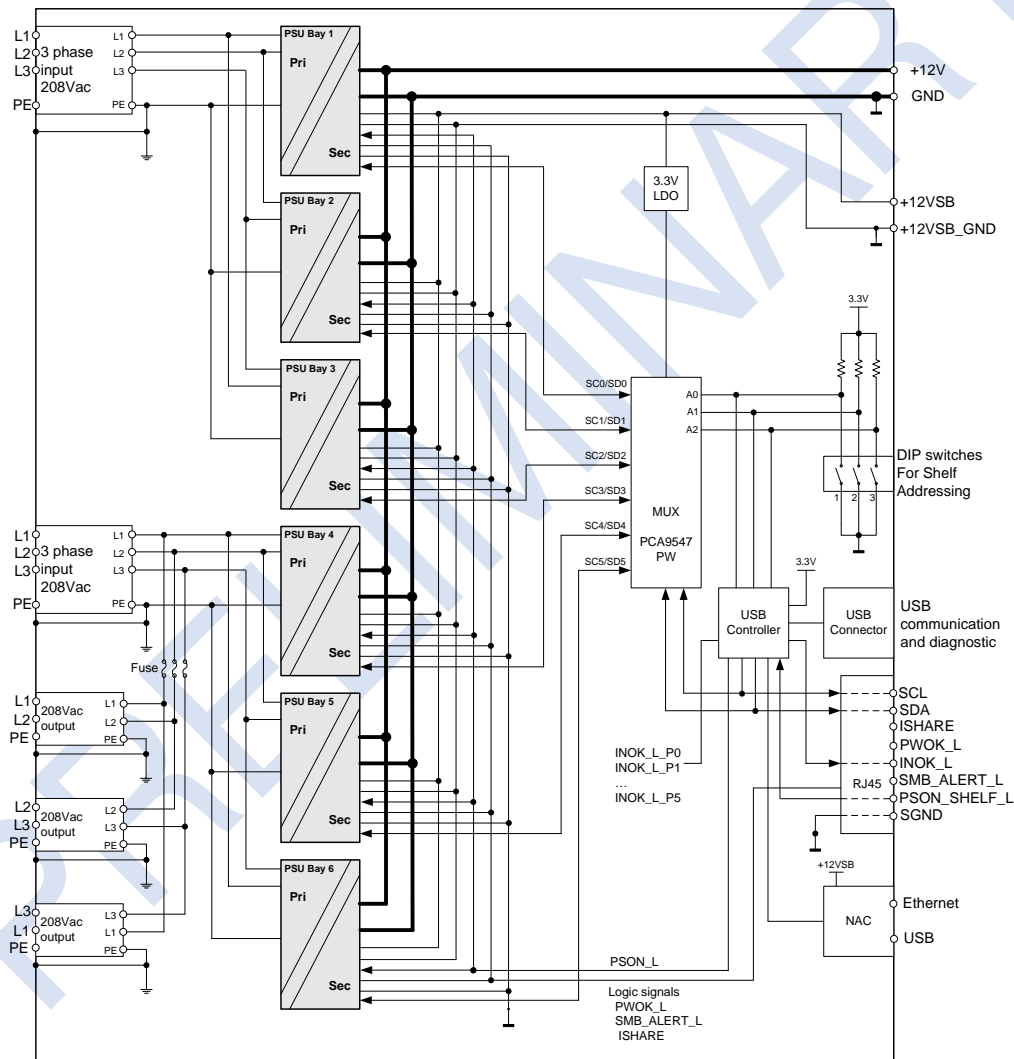

Figure 1. SPSPFE3-XX Block Diagram

6. INPUT SPECIFICATIONS

PARAMETER	DESCRIPTION / CONDITION	MIN	NOM	MAX	UNIT
Input Connector (J106, J107)					
AC Nominal Input Voltage	Line to Line input		208		VAC
AC Input Voltage Ranges	Line to Line input	200		240	VAC
Max Input Current	per line			30	Arms
Input Frequency		47	50 / 60	63	Hz

7. OUTPUT SPECIFICATIONS

PARAMETER	DESCRIPTION / CONDITION	MIN	NOM	MAX	UNIT
Main Output V1 (Output Bus Bar)					
Nominal Output Voltage			12.3		VDC
Voltage Regulation		-5		+5	% Vout nom
Nominal Output Power 1	3+3 configuration, $T_a < 45^{\circ}\text{C}$			8700	W
Derated Output Power 1	3+3 configuration, $T_a = 55^{\circ}\text{C}^2$			6525	W
Nominal Output Power 2	5+1 configuration, $T_a < 45^{\circ}\text{C}$			14400	W
Derated Output Power 2	5+1 configuration, $T_a = 55^{\circ}\text{C}^3$			10800	W
Nominal Output Current 1	3+3 configuration, $T_a < 45^{\circ}\text{C}$			707	ADC
Derated Output Current 1	3+3 configuration, $T_a = 55^{\circ}\text{C}^3$			530	ADC
Nominal Output Current 2	5+1 configuration, $T_a < 45^{\circ}\text{C}$			1171	ADC
Derated Output Current 2	5+1 configuration, $T_a = 55^{\circ}\text{C}^3$			878	ADC

Standby Output VSB (J23)					
Output Voltage			12		VDC
Voltage Regulation		-5		+5	% Vout nom
Output Power				60	W
Output Current				5	ADC

Auxiliary AC Outlet (J123, J124, and J125)					
AC Output Voltage	Line to Line		208		VAC
AC Output Current				4	Arms
Fuse Protection per Line	Serviceable (10 A / 500 VAC Time Lag fuse)				

Note: When T_a : $+45^{\circ}\text{C}$ to $+55^{\circ}\text{C}$, Output load current must be derated to 75%.

² Linear derating at $T_a > 45^{\circ}\text{C}$ is based per module, see PFE3000-12-069RA datasheet

7.1 PROTECTION (PER MODULE)

PARAMETER	DESCRIPTION / CONDITION	MIN	NOM	MAX	UNIT
Input Fuses (L+N)	Not user accessible, quick-acting (F)		25		A
OV Threshold V_I		13.6	14.2	14.8	VDC
OV Latch Off Time t_I				1	ms
OV Threshold V_{SB}		13.3	13.9	14.5	VDC
OV Latch Off Time V_{SB}				1	ms
Current Limitation	$T_a < 45^\circ\text{C}$ $T_a = 55^\circ\text{C}$	248 186		274 212	A
Current Limit Blanking Time	Time to latch off when in over current	20	22	24	ms
Current Limit During Short Time Overload I_I	Maximum duration 20ms, per module	292	300	308	A
Max Short Circuit Current I_I	$I_I < 3\text{ V}$, per module			350 ³	A
Short Circuit Latch Off Time	Time to latch off when in short circuit		10		ms
Current Limitation V_{SB}	Per module	6		9	A
Current Limit Blanking Time	Time to hit hiccup when in over current			1	ms
Over Temperature on Critical Points	Inlet Ambient Temperature PFC Primary Heatsink Temperature Secondary Sync Mosfet Temperature Secondary OR-ing Mosfet Temperature			60 80 115 125	$^\circ\text{C}$

7.2 INTERFACE & CONTROL SIGNALS

The PWOK_L is an open collector output of all modules and they are interconnected (wired-OR) within the shelf and this signal is fed to the signal connector. PWOK_L is low when there is at least one module in operation. SMB_ALERT_L is also wired-OR already in the shelf. Sink current must not exceed 4 mA on each of these signals.

The internal INOK_L_Px signal of each individual module is fed to the backplane microcontroller for modules synchronized AC startup. This allows the shelf to start up with load > 3000 W during AC application. The microcontroller provides an INOK_L output signal. INOK_L is low when there is at least one module supplied with correct input voltage.

PSON_SHELF_L signal is an internally pulled-up input signal (3.3 V) to enable / disable the main output V1 of the Shelf. This active-low pin is also used to clear any latched fault condition. This is similar to the PSON_L on the PSU level. PSON_SHELF_L is currently bypassed in ON_OFF_CONFIG command. A pull up resistor of 10k Ω to 3.3 V within the shelf provides the high-level voltage for the PWOK_L, INOK_L and SMB_ALERT_L signals.

The Power Shelf V1 output is capable to be operated in redundant mode by interconnecting the ISHARE on J20. Please consult BPS Technical Representative for details.

RJ45 PIN OUTS (J20)	FUNCTION	DESCRIPTION
1 ⁴	SCL	I2C clock signal line
2 ⁵	SDA	I2C data signal line
3	ISHARE	V1 Current share bus
4	PWOK_L	Power OK signal output: active-low
5	INOK_L	Input OK signal: active-low
6	SMB_ALERT_L	SMB Alert signal output: active-low
7	PSON_SHELF_L	Power Shelf on input: active-low
8	SGND	Signal ground

Table 1. I2C Interface and Signal Connector (RJ45) Pin Out

³ Limit doesn't include effects of main output capacitive discharge

⁴ External Pull-up resistor should be 2 – 5k Ω to ensure SMBUS compliant signal rise times

7.3 I2C COMMUNICATION

The PSU Modules are set to a fixed I2C Address (0x20). Power Management Bus communication for the PSU Modules are described in more detail in document BCA.00070. The I2C communication to the PSU Modules are routed through an I2C Multiplexer. The I2C MUX Control Register needs to be configured so that the I2C frames are routed to the correct PSU Module. Refer to the I2C MUX datasheet for additional information.

The I2C MUX and backplane controller addresses are configurable via DIP Switches (SW1);

The PSON function of the shelf can also be controlled by a Power Management Bus command sent to the backplane Controller, see document BCA.00178 for further information and the table below.

COMMAND		ACCESS	DATA BYTES	COMMENTS
Code	Name			
0x01	OPERATION	Byte R/W	1	Supported Values: 0x00 = Unit Off 0x80 = Unit On (Default)
0x02	ON_OFF_CONFIG	Byte R/W	1	Supported Values: 0x1D (Default) 0x01, 0x11, 0x15, 0x19

NOTE: A setting in the ON_OFF_CONFIGURATION register doesn't survive a power cycle. See also the Power Management Bus protocol definition.

7.4 I2C ADDRESSING (SHELF)

The shelf default MUX address is 0xEE and Controller address is 0x5E. When DIP switch (SW1) is in "ON" position means 0, "OFF" Position means 1.

POSITION 1	POSITION 2	POSITION 3	MUX ADDRESS (IN HEX)	Controller ADDRESS (IN HEX)
ON	ON	ON	0xE0	0x50
OFF	ON	ON	0xE2	0x52
ON	OFF	ON	0xE4	0x54
OFF	OFF	ON	0xE6	0x56
ON	ON	OFF	0xE8	0x58
OFF	ON	OFF	0xEA	0x5A
ON	OFF	OFF	0xEC	0x5C
OFF	OFF	OFF	0xEE	0x5E

NOTE: Communication Manual of shelf, see document BCA.00178.

Table 2. DIP Switch Setting (SW1)

7.5 NETWORK ATTACHED CONTROLLER

The Network Attached Controller (NAC1006-01) is a shelf level controller providing monitoring and control functions through a 10/100 MB base Ethernet port and can be connected directly to the data center management network. It is hot-pluggable and supplied via the 12 V redundant standby provided by the power supplies in the shelf. The controller can be configured through a web interface; the monitoring and control functions are accessed through SNMP.

See BCD.00926 for NAC1006-01 Datasheet.

7.6 CONTROL LEDs

Each PSU front-end module has 2 LEDs to indicate status condition. LED number one is green and indicates AC power is on or off, while LED number two is bi-colored: green and yellow and indicates DC power presence or fault situations.

PARAMETER	DESCRIPTION / CONDITION	LED SIGNALING
AC LED	AC Line within range	Solid Green
	AC Line UV condition	Off
	Normal Operation	Solid Green
	PSON_L High	Blinking Yellow (1:1)
DC LED⁵	V_I or V_{SB} out of regulation	Solid Yellow
	Over temperature shutdown	
	Output over voltage shutdown (V_I or V_{SB})	
	Output under voltage shutdown (V_I or V_{SB})	
	Output over current shutdown (V_I or V_{SB})	Blinking Yellow/Green (2:1)
	Over temperature warning	
	Minor fan regulation error (>5%, <15%)	

7.7 USB CONNECTOR TYPE B (J3)

This is used for Bel Power Diagnostic thru Bel Power Solutions I²C Utility GUI. This connection also provides access to FW boot loading of the PSU Modules.

Figure 2. Connection

WARNING:

The USB interface is NOT galvanically isolated and referenced to the +12V_GND / SGND lines. Preferably, use a battery-operated laptop to avoid earth loop issues. If a desktop computer is being used, there is a risk of generating earth loop currents, therefore the usage of a USB isolator is highly recommended in such a case.

7.8 +12VSB CONNECTOR (J23)

+12VSB output is capable of delivering 5A. The output is protected by a PTC (16R900GF from Littelfuse). Mating Part: Molex 39-01-2045

PIN OUTS (J23)	FUNCTION	DESCRIPTION
1, 3	VSB_GND	+12VSB return
2, 4	VSB	+12VSB output

⁵ The order of the criteria in the table corresponds to the testing precedence in the controller.

7.9 AUXILIARY AC OUTLET

The 3 connectors (J123, J124, and J125) are used to provide AC power to the Network Switch Devices. Each connector is connected across the LIVE terminals (L1, L2, and L3) from the 3-phase input (J107). These are protected by a 10 A / 250 Vac Time Lag fuse on the LIVE terminals. See Safety Warning when servicing the fuse.

When power shelf is operated at ambient temp of +45 °C to +55 °C, the output load current must be derated to 75%.

8. SAFETY, REGULATORY AND EMC SPECIFICATIONS

PARAMETER	DESCRIPTION / CONDITION	CRITERION
