AC-DC POWER SHELVES SPSTET4-01, SPSTET4-07, SPSTET4-08, SPSTET4-09

The SPSTET4 power shelf solutions provide rectification, system management, and power distribution functions while maintaining high reliability and offering flexibility for future expansion.

The power shelf can be configured with up to six hot-swap capable TET4000-48-069RAH AC/DC-DC power modules that convert AC input to 54.5 VDC output for powering IT racks, OCP racks and Data centers.

The shelf has an optional slot for a Network Attached Controller, providing control functions and monitoring through a 10/100 MB base Ethernet port. It can be connected directly to the data center management network.

Key Features & Benefits

- Two 3-Phase WYE inputs, each input supports 3 power modules
- Power modules are hot-swap capable
- Power shelf and power modules support CANBus communication for control, programming, and monitoring
- Power modules implement the following protections:
over temperature, output over voltage and output overcurrent
- Dimensions w/o busbar: 535 x 47 x 602 mm (21.06 x 1.85 x 27.7 in)

Applications

- IT racks
- OCP racks
- Data centers

6. OVERVIEW

The SPSTET4 is a 10U height power shelf. It can be configured with up to six hot-swap capable TET4000-48-069RAH AC/DC-DC power modules that convert standard AC input to a 54.5 VDC output.

The power shelf and power module support CANBus communication for control, programming, and monitoring. The power shelf and power module are connected to the same CANBus interface. Refer to the respective CAN Communication Manual for additional information.

The power shelf has a slot for a Network Attached Controller (NAC) for providing control functions and monitoring through a 10/100 MB base Ethernet port. It is hot-pluggable and supplied via the 12 V standby output of the power modules. The NAC can be configured through a web interface; the monitoring and control functions are accessed through SNMPv3.

9. COMMUNICATION

Communication to the power shelf and the power modules is via CANBus. The power modules also use CANBus for its active current-share function. For further information please refer to the CAN Communication Manual documents (BCA.00257.0 and BCA.00231.0).

9.2. ADDRESSING

The power shelf and the power modules are individually addressable. The individual addresses are configured via DIP Switch (S1201) according to the table below.

DIP Switch			Address

9.3. NETWORK ATTACHED CONTROLLER (OPTIONAL)

The Network Attached Controller is a shelf level controller providing monitoring and control functions through a 10/100 MB base Ethernet port. It is hot-pluggable and supplied via the 12 V standby output of the power modules. The controller can be configured through a web interface; the monitoring and control functions are accessed through SNMP. See BCA.00318 for Network Attached Controller Documentation.

10. PARALLEL OPERATION

Up to 8 SPSTET4-0x power-shelves can be configured for parallel operation.

For parallel operation:

- Connect the following:
 - V1 Main Output
 - VSB Standby Output
 - CANBus
- NAC
 - Per power-zone, install only 1 NAC.
 - If a NAC is used, then install it either on the top-shelf or the bottom-shelf.
 - If a NAC is installed, a CAN Terminator on that shelf is not required. The NAC has termination assembled internally.
- CANBus connection and termination
 - Use CANBus Cables (see Accessories) to connect the CAN ports between shelves.
 - Connect a CAN Terminator (see Accessories) to the top-shelf and bottom-shelf. If a NAC is installed, a CAN Terminator on that shelf is not required.
- Set the power-shelf address via the DIP Switches

11. LEDs

11.1. POWER MODULE LEDS (FRONTSIDE)

Each power module has 2 LEDs to indicate status condition. LED number one is green and indicates AC power is on or off, while LED number two is bi-colored: green and yellow to indicate DC power presence or fault conditions.

OPERATING CONDITION	LED SIGNALING
AC LED	
AC Line within range	Solid Green
AC Line out of range	Off
DC LED⁵	
V_I or V_{SB} out of regulation	Solid Yellow
Over temperature shutdown	
Output over voltage shutdown (V_I or V_{SB})	
Output under voltage shutdown (V_I or V_{SB})	
Output over current shutdown (V_I or V_{SB})	
Invalid CANBus Node-Id	Blinking Yellow
Main output V1 is turned off	Blinking Green
Normal Operation	Solid Green
Power module is back supplied and AC Line out of range	Blinking Yellow
Otherwise	Off

11.2. POWER SHELF LEDS (BACKSIDE)

LED	FUNCTION	DESCRIPTION
LED 1	INOK_L	On if INOK_L is low. See "Logic Signals"
LED 2	PSON_SHELF_L	On if PSON_SHELF_L is low. See "Logic Signals"
LED 3	-	Reserved
LED 4	WATCHDOG	Blink 1 Hz if the Shelf Controller is alive.

11.3. +12VSB CONNECTOR (J1204)

PIN OUTS (J1204)	FUNCTION	DESCRIPTION
1, 3	VSB_GND	+12VSB return
2, 4	VSB	+12VSB output

12. AUXILIARY AC OUTLET

The 3 connectors (J1202, J1206, and J1207) are used to provide AC power to the Network Switch Devices. Each connector is connected to one of the LIVE terminals (L1, L2, and L3) and NEUTRAL from the 3-phase input (J1108). These are protected by a 10 A / 500 VAC Time Lag fuse on the LIVE terminal (F1201) and 15 A / 500 VAC Fast-Acting fuse on the LIVE terminal (F1206, and F1207). See Safety Warning when servicing the fuse.

When a power shelf is operated at ambient temp of +45 °C to +55 °C, the output load current must be derated to 75%.

⁵ The order of the criteria in the table corresponds to the testing precedence in the controller. LEDs are only available if sufficient input voltage is applied for operation of the internal supply circuits.
