

SPSTET4-02

ACDC Power Shelf

SPSTET4-02 power-shelf solutions provide rectification, system management, and power distribution, while maintaining high reliability and offering flexibility for future expansion.

The power shelf can be configured with up to six hot-swap capable TET4000-48-069RA AC/DC-DC power supplies that convert single phase AC mains power into a main output of 54.5 VDC for powering intermediate bus architectures (IBA) in high performance and reliability servers, routers, and network switches.

The shelf has the option of built-in Network Attached Controller for providing control functions and monitoring through a 10/100 MB base Ethernet port and can be connected directly to the data center management network.

Key Features & Benefits

- 3x single-phase inputs, one AC inlet power up 2 PSU modules.
- Modules are hot-swap capable
- Modules support CAN communication interface for control, programming and monitoring with CAN communication protocol
- Modules implement the following protections: Overtemperature, output overvoltage and output overcurrent
- RoHS Compliant

Applications

- High Performance Servers
- Routers
- Switches

1. ORDERING INFORMATION

MODEL	INPUT AND OUTPUT CONFIGURATION
SPSTET4-02	3x single-phase inputs, 200 – 250 VAC Line to Line/Neutral, single output blade for +54.5 V output.
SPSTET4-02N	3x single-phase inputs, 200 – 250 VAC Line to Line/Neutral, single output blade for +54.5 V output with Network Attached Controller.

2. TECHNICAL DATA

PARAMETER	DESCRIPTION / CONDITION
Input	3x Single-phase, 200-250 VAC Line to Line/Neutral.
AC Inlet Configuration	3 pcs Input AC inlet. One AC inlet power up 2 PSU modules
Redundant Configuration	5+1 configuration
Rated Power	19450 W ¹
Output Connection	1 set of output blade for +54.5 VDC output
Standby Output	250 W (Standby output 12 V / 21 A) ²
Communication	CAN Interface / Ethernet – SNMPv3/ HTTPs / USB 2.0

3. SAFETY WARNING

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user indemnifies Bel Power Solutions Inc. from all claims arising from the handling or use of the goods. Persons handling the product(s) must have electronics training and observe good engineering practice standards.

CAUTION: Multiple power source. Disconnect all power cords before servicing.

5. OVERVIEW

The SPSTET4-02 Power Shelf is a 10U height power shelf. It can be configured with up to six hot-swap capable TET4000-48-069RA AC/DC-DC power supplies that convert standard AC mains power into a main output of 54.5 VDC for powering intermediate bus architectures (IBA) in high performance and reliability servers, routers, and network switches.

The CAN communication is routed through the CAN BUS inside the shelf. PSU Modules support CAN communication interface for control, programming and monitoring with the CAN communication protocol.

The shelf has the option of built-in network attached controller (NAC) for providing control functions and monitoring through a 10/100 MB base Ethernet port and can be connected directly to the data center management network. It is not hot-pluggable and

¹ Rated Power is reduced as per current share accuracy characteristic. See TET4000-48-069RA Datasheet.

² 12VSB loading is limited to 60 W for the initial 500 ms after +12VSB has started.

supplied via the 12 V standby provided by the power supplies in the shelf. The controller can be configured through a web interface; the monitoring and control functions are accessed through SNMPv3.

6. INPUT SPECIFICATIONS

PARAMETER	DESCRIPTION / CONDITION	MIN	NOM	MAX	UNIT
Input Connector (J9, J10, J11)					
AC Nominal Input Voltage	Line to Line input	200	230	250	VAC
AC Input Voltage Ranges	Line to Line input	180		275	VAC
Max Input Current	Per line			34	Arms
Input Frequency		47	50 / 60	63	Hz

7. OUTPUT SPECIFICATIONS

PARAMETER	DESCRIPTION / CONDITION	MIN	NOM	MAX	UNIT
Main Output V1 (Output Bus Bar)					
Nominal Output Voltage			54.5		VDC
Voltage Regulation	Programmable PSU module	-12		+6.5	% Vout nom
Nominal Output Power	5+1 configuration, $T_a < 45^\circ\text{C}$			19200	W
Derated Output Power	5+1 configuration, $T_a = 55^\circ\text{C}$			14400	W
Nominal Output Current	5+1 configuration, $T_a < 45^\circ\text{C}$			352	ADC
Derated Output Current	5+1 configuration, $T_a = 55^\circ\text{C}$			264	ADC
Standby Output VSB (J12)					
Output Voltage			12		VDC
Voltage Regulation		-5		+5	% Vout nom
Output Power				250	W
Output Current				21	ADC

7.1 PROTECTION (PER MODULE)

PARAMETER	DESCRIPTION / CONDITION	MIN	NOM	MAX	UNIT
Input Fuses (L+N)	Not user accessible, fast-acting (F)		30		A
OV Threshold V_1	Hardware protection	64	67	70	VDC
OV Latch Off Time t_1				1	ms
Nominal Power Limitation	$V_{in} > 180\text{Vac}$, $T_a \leq 45^\circ\text{C}$, $V_1 \geq 48\text{ VDC}$	4000	4100		W
Nominal Current Limitation	$V_{in} > 180\text{Vac}$, $T_a \leq 45^\circ\text{C}$, $V_1 \geq 48\text{ VDC}$	73	76		A
Power Limit Blanking Time	Time until power limit is reduced to nominal value		5		ms
Power limit during oversubscription V_1	Maximum duration 5 ms	4400	4500		W
Current limit during Oversubscription I_1	Maximum duration 5ms	83	86		A
Max Short Circuit Current I_1	$V_1 < 10\text{ VDC}$			83 ³	A
Short Circuit Latch Off Time	Time to latch off when in short circuit or output under voltage ($V_1 < 42\text{ VDC}$)		20		ms
UV Threshold V_1	Output under voltage protection	42.5	43	43.5	VDC
V_1 Output under voltage protection delay time	$V_1 < V_{1\text{ UV}}$		20		ms
Over Temperature on Critical Points	Inlet Ambient Temperature			60	$^\circ\text{C}$
	PFC Primary Heatsink Temperature			90	
	Secondary Sync Mosfet Temperature			90	
	Secondary OR-ing Mosfet Temperature			100	
UV Threshold V_{SB}	Output under voltage protection standby	11	11.2	11.3	VDC
Current Limitation V_{SB}	Standby over current limit	5.0	5.5		A

³ Limit doesn't include effects of main output capacitive discharge

7.2 LOGIC SIGNALS

PSON_SHELF_L signal is an internally pulled-up input signal (3.3 V) to enable / disable the main output V1 of the Shelf. This active-low pin is also used to clear any latched fault condition, this is similar to the PSON_L on the PSU level. The internal INOK_LPx signal of each individual module is fed to the backplane microcontroller for modules synchronized AC startup. This allows the shelf to start up with load > 4000 W during AC application. The microcontroller provides an INOK_L output signal. INOK_L is low when there is at least one module supplied with correct input voltage. A pull up resistor of 10kΩ to 3.3 V within the shelf provides the high level voltage for the INOK_L signal.

RJ45 PIN OUTS (J15)	FUNCTION	DESCRIPTION
1	NC	NC
2	NC	NC
3	NC	NC
4	NC	NC
5	INOK_L	INOK signal: active-low
6	NC	NC
7	PSON_SHELF_L	Power shelf on input: active-low
8	SGND	Signal ground

Table 1. Signal Connector (RJ45) Pin Out

7.3 CAN COMMUNICATION

The PSU Modules are individually set to six fixed different address. CAN communication for the PSU Modules are described in more detail in document BCA.00231. The CAN communication to the PSU Modules are routed through CAN BUS. The PSON function of the shelf can also be controlled by a command similar to PMBus® command sent to the backplane Controller, see document BCA.00254.0 for further information and the table below.

Dsub 9 PIN OUTS (J14)	FUNCTION	DESCRIPTION
1	NC	NC

Front View

7.4 PSU / SHELF ADDRESSING

The PSU address inside shelf are configurable via DIP Switch (S1);

The Default Shelf Controller Node address is 0x0F.

POSITION 1	POSITION 2	POSITION 3	PSU Address PSU1, PSU2...PSU6		
			PSU1	PSU2	PSU6
ON	ON	ON	0x01	0x02	0x06
OFF	ON	ON	0x11	0x12	0x16
ON	OFF	ON	0x21	0x22	0x26
OFF	OFF	ON	0x31	0x32	0x36
ON	ON	OFF	0x41	0x42	0x46
OFF	ON	OFF	0x51	0x52	0x56
ON	OFF	OFF	0x61	0x62	0x66
OFF	OFF	OFF	0x71	0x72	0x76

NOTE: SPSTET4-02 CAN Communication Manual, see document BCA.00254.0

Table 2. DIP Switch Setting (S1)

7.5 NETWORK ATTACHED CONTROLLER (optional)

The Network Attached Controller is a shelf level controller providing monitoring and control functions through a 10/100 MB base Ethernet port and can be connected directly to the data center management network. It is not hot-pluggable and supplied via the 12 V redundant standby provided by the power supplies in the shelf. The controller can be configured through a web interface; the monitoring and control functions are accessed through SNMP.

See BCA.00253.0 for Network Attached Controller Documentation.

7.5.1 LAN PORT: RJ45 (J3)

The LAN should be connected to the RJ45 connector on the front of the NAC. The Ethernet port is galvanically isolated from the PSU output and is connected to a 10Base-T/100Base-TX physical-layer transceiver for transmission and reception of data over standard CAT-5 unshielded twisted pair (UTP) cables. The built-in HP Auto MDI/MDI-X function allows to reliably detect and auto correct straight-through and crossover cable connections. The transceiver will automatically negotiate the and select the highest link-up speed (10/100 Mbps) and duplex (half/full) configuration. Once the interface has received an IP address on the network, the yellow LED on the controller is disabled. On the RJ45 connector only the green LED is active and lights up when there is traffic activity on the network.

7.5.2 USB PORT : MINI USB CONNECTOR (J4)

The front USB port is a slave connection and implements an HID interface which can be used in conjunction with the Bel Power Solutions graphical user interface.

7.5.3 NAC LEDS

Two LEDs are being provided:

- LED1 green: controller is powered; off: no power available on controller
- LED2 yellow: no IP address assigned; off: IP address assigned

7.6 CONTROL LEDs

Each PSU front-end module has 2 LEDs to indicate status condition. LED number one is green and indicates AC power is on or off, while LED number two is bi-colored: green and yellow and indicates DC power presence or fault situations.

OPERATING CONDITION	LED SIGNALING
AC LED	
AC Line within range	Solid Green
AC Line UV condition	Off
DC LED⁴	
V_I or V_{SB} out of regulation	Solid Yellow
Over temperature shutdown	
Output over voltage shutdown (V_I or V_{SB})	
Output under voltage shutdown (V_I or V_{SB})	
Output over current shutdown (V_I or V_{SB})	
Invalid Node Id	Blinking Yellow
Power Supply Turned Off	Blinking Green
Normal Operation	Solid Green
PSU back-supplied	Blinking Yellow
Otherwise	All LEDs off

7.7 USB CONNECTOR TYPE B (J16)

This is used for Bel Power Diagnostic thru Bel Power Solutions I²C Utility GUI. This connection also provides access to FW boot loading of the PSU Modules.

Figure 2. Connection

7.8 +12VSB CONNECTOR (J12)

+12VSB output is capable of delivering 21 A.

PIN OUTS (J12)	FUNCTION	DESCRIPTION
3,4,7,8	VSB_GND	+12VSB return
1,2,5,6	VSB	+12VSB output

⁴ The order of the criteria in the table corresponds to the testing precedence in the controller. LEDs are only available if sufficient input voltage is applied for operation of the internal supply circuits.

8. SAFETY, REGULATORY AND EMC SPECIFICATIONS

PARAMETER	DESCRIPTION / CONDITION	CRITERION
Agency Approvals	Approved to the latest revisions/amendments of the following standards: UL 62368-1 2nd edition CAN/CSA-C22.2 No. 62368-1 2nd edition IEC 62368-1 2nd edition	Approved by independent body (see CE Declaration)
