

S18 SERIES

The **S18** series basic line includes all the most diffused tubular photoelectric sensor models. The retroreflex optic function is available in two versions, with or without the optic polarisation filter for the detection of shiny objects, and with operating distances up to 3 m according to the reflector used. Two different diffuse proximity versions with 10 or 30 cm operating distances are also available; while the through beam models offer a 12 m operating distance. The connection can be either with a cable or M12 connector; in both cases the 4 wire connection allows the complete configuration of the NPN/PNP output and dark/light operating mode. The **S18** models offer ABS housing and fixing nuts, while the **S18M** models offer them in nickel-plated brass. The IP67 protection is guaranteed in all models.
