## I. OTHER SPECIFIED TESTING

The following is a general description of certain tests that are performed on representative SUNON fans. Nothing in this document is intended to suggest that these tests are performed on every model of SUNON fan. Moreover, the descriptions that follow each test are meant only to provide a general explanation of each test. If you would like a more detailed explanation as to any test identified in this section, SUNON can provide such an explanation upon request.

### 1. DROP PROOF TEST

Fans are packaged in a standard size shipping box and are dropped to the ground from certain heights and angles depending on the weight of the particular box.

### 2. HUMIDITY PROOF TEST

The fan is operated for 96 continuous hours in an environment with humidity of 90% to 95% RH at  $60^{\circ}\text{C} \pm 2^{\circ}\text{C}$ .

### 3. VIBRATION PROOF TEST

Vibration with an amplitude 2mm and a frequency of 5–55–5hz is applied in all 3 directions (X,Y,Z), in cycles of 1 hour each, for a total vibration time of 3hours.

### 4. THERMAL CYCLING TEST

The fan is operated in a testing chamber for 50 cycles. In each cycle, the temperature is gradually increased from  $-10^{\circ}\text{C}$  to  $70^{\circ}\text{C}$  for 90 minutes, and subsequently operated at  $70^{\circ}\text{C}$  for 120 minutes. The temperature is then gradually decreased from  $70^{\circ}\text{C}$  to  $-10^{\circ}\text{C}$  for 90 minutes, and subsequently operated at  $-10^{\circ}\text{C}$  for 120 minutes.

### 5. SHOCK PROOF TEST

100G of force is applied in the 3 directions (X,Y, and Z) for 2 milliseconds each.

### 6. LIFE EXPECTANCY

The “Life Expectancy” of SUNON fans is determined in SUNON’s reliability test laboratory by using temperature chambers. The “Life Expectancy” of this fan has not been evaluated for use in combination with any end application. Therefore, the Life Expectancy Test Reports (L10 and MTTF Report) that relate to this fan are only for reference.

## II. CHARACTERISTIC DEFINITION

The following is a general description of certain tests that are performed on representative SUNON fans in order to determine the specifications of the fan. Nothing in this document is intended to suggest that these tests are performed on every model of SUNON fan. Moreover, the descriptions that follow each test are meant only to provide a general explanation of each test. If you would like a more detailed explanation as to any test identified in this Section, SUNON can provide such an explanation upon request.

### 1. INPUT POWER

Measured after continuous 10 minutes operation at rated voltage in clean air ( STATIC PRESSURE=0), and at ambient temperature of 25 degrees C under shaft horizontal condition.

### 2. RATED CURRENT

Measured after continuous 10 minutes operation at rated voltage in clean air ( STATIC PRESSURE=0), and at ambient temperature of 25 degrees C under shaft horizontal condition.

### 3. RATED SPEED

Measured after continuous 10 minutes operation at rated voltage in clean air ( STATIC PRESSURE=0), and at ambient temperature of 25 degrees C under shaft horizontal condition.

### 4. STARTING VOLTAGE

Measured the voltage which enables to start the fan in the clean air (static pressure = 0 )by switching on at the voltage under shaft horizontal condition. It is not at continuouslyincreasing voltage adjustment.

### 5. LOCKED ROTOR CURRENT

Measured immediately after the fan blade is locked.

### 6. AIR FLOW AND STATIC PRESSURE

The performance specification of air flow and static pressure shown in this specification for approval is measured using the exhaust method. A double chamber is used in accordance with AMCA 210 standard or DIN 24163 specification . The values are recorded when the fan speed has stabilized at rated voltage.

## 7. INSULATION RESISTANCE

### 7.1. PLASTIC HOUSING:

(1) Measured between internal stator and lead wire(+).

(2) Measured between housing and lead wire(+).

### 7.2. ALUMINIUM HOUSING:

Measured between internal stator and lead wire(+).

## 8. DIELECTRIC STRENGTH

Measure between housing and lead wire(+).
