

MGA-13216

High Gain, High Linearity, Very Low Noise Amplifier

Data Sheet

Description

Avago Technologies' MGA-13216 is a two stage, easy-to-use GaAs MMIC Low Noise Amplifier (LNA). The LNA has low noise with good input return loss and high linearity achieved through the use of Avago Technologies' proprietary 0.25 μm GaAs Enhancement-mode pHEMT process. Minimum matching needed for input, output and the inter-stage between the two LNA.

It is designed for optimum use between 1.5 GHz to 2.5 GHz. For optimum performance at lower frequency from 400 MHz to 1.5 GHz, the MGA-13116 is recommended. Both MGA-13216 & MGA-13116 share the same package and pinout configuration.

Notes:

1. Measurements obtained using demo board described in Figure 7 with component list in Table 1. Input and Output trace loss is not de-embedded from the measurement.
2. OIP3 test condition: f_{tone1} = 1.95 GHz, f_{tone2} = 1.951 GHz with input power of -27 dBm per tone.
3. Use proper bias, heatsink and derating to ensure maximum channel temperature is not exceeded. See absolute maximum ratings and application note for more details.
