Data Sheet

ASSR-1410, ASSR-1411 and ASSR-1420

General-Purpose, Form A, Solid State Relay (Photo MOSFET) (60V/0.6A/1Ω)

Description

The Broadcom® ASSR-14XX Series consists of an AlGaAs infrared light-emitting diode (LED) input stage optically coupled to a high-voltage output detector circuit. The detector consists of a high-speed photovoltaic diode array and driver circuitry to switch on/off two discrete high-voltage MOSFETs. The relay turns on (contact closes) with a minimum input current of 3 mA through the input LED. The relay turns off (contact opens) with an input voltage of 0.8V or less.

The single-channel configurations, ASSR-1410 and ASSR-1411, are equivalent to 1 Form A Electromechanical Relays (EMR), and the dual-channel configuration, ASSR-1420, is equivalent to 2 Form A EMR. They are available in 4-pin SO, 6-pin DIP, 8-pin DIP and Gull Wing Surface Mount for DIP packages. Their electrical and switching characteristics are specified over the temperature range of –40°C to +85°C. They are used for general-purpose switching of signals and low-power AC/DC loads.

ASSR-1411 enables AC/DC and DC-only output connections. For DC-only connection, the output current, I_O, increases to 1.2A and the on-resistance, $R_{(ON)}$ reduces to 0.5Ω.

CAUTION! It is advised that normal static precautions be taken in handling and assembly of this component to prevent damage and/or degradation which may be induced by ESD.

Features

- Compact solid-state bidirectional signal switch
- Single and dual channel normally-off Single-Pole-Single-Throw (SPST) relay
- 60V output withstand voltage
- 0.6A or 1.2A current rating (See schematic for ASSR-1411 connections A and B.)
- Low input current: CMOS compatibility
- Low on-resistance:
  - 0.2Ω typical for DC-only
  - 0.7Ω typical for AC/DC
- High speed switching:
  - 0.1 ms (T_{ON}), 0.02 ms (T_{OFF}) typical
- High transient immunity: >1 kV/µs
- High input-to-output insulation voltage (safety and regulatory approvals)
  - 3750 Vrms for 1 min per UL1577
  - CSA component acceptance

Applications

- Telecommunication switching
- Data communications
- Industrial controls
- Medical
- Security
- EMR/Reed Relay replacement

Regulatory Information

The ASSR-1410, ASSR-1411, and ASSR-1420 are approved by the following organizations:

UL

Approved under UL 1577, component recognition program up to V_{ISO} = 3750 Vrms.

CSA

Approved under CSA Component Acceptance Notice #5.

Applications Information

On-Resistance and Derating Curves

The Output On-Resistance, $R_{(ON)}$, specified in this data sheet, is the resistance measured across the output contact when a pulsed current signal (I_O = 0.6A) is applied to the output pins. The use of a pulsed signal (≤30 ms) implies that each junction temperature is equal to the ambient and case temperatures. The steady-state resistance, Rss, on the other hand, is the value of the resistance measured across the output contact when a DC current signal is applied to the output pins for a duration sufficient to reach thermal equilibrium. Rss includes the effects of the temperature rise in the device.

Derating curves are shown in Figure 1, Figure 2, Figure 3, and Figure 4, specifying the maximum output current allowable for a given ambient temperature. The maximum allowable output current and power dissipation are related by the expression $Rss = Po(max)/(Io(max))^2$ from which Rss can be calculated. Staying within the safe area ensures that the steady-state MOSFET junction temperature remains less than 125°C.

Turn On Time and Turn Off Time Variation

The ASSR-14xx Series exhibits a very fast turn on and turn off time. Both the turn on and turn off time can be adjusted by choosing proper forward current as depicted in Figure 11 and Figure 13. The changes of the turn on and turn off time with ambient temperature are also shown in Figure 12 and Figure 14.
