Precision Optical Performance Red, Green and Blue
New 5mm Standard Oval LEDs

AVAGO
TECHNOLOGIES

Data Sheet

Lead (Pb) Free
RoHS 6 fully
compliant

Description

These Precision Optical Performance Oval LEDs are specifically designed for full color/video and passenger information signs. The oval shaped radiation pattern and high luminous intensity ensure that these devices are excellent for wide field of view outdoor applications where a wide viewing angle and readability in sunlight are essential. The package epoxy contains both UV-A and UV-B inhibitors to reduce the effects of long term exposure to direct sunlight.

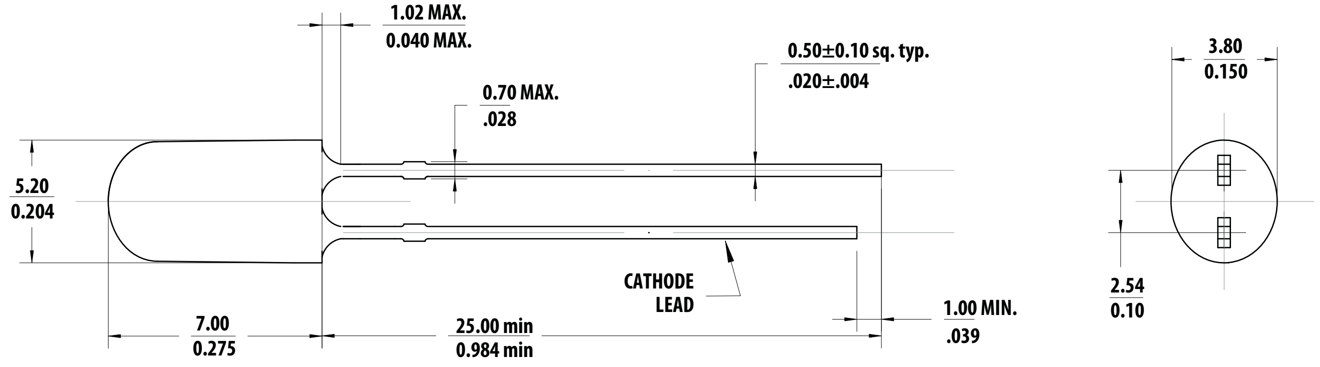
Features

- Well defined spatial radiation pattern
- High brightness material
- Available in Red, Green and Blue color
  - Red AlInGaP 626 nm
  - Green InGaN 525nm
  - Blue InGaN 470nm
- Superior resistance to moisture
- Non-Standoff Package
- Tinted and diffused
- Typical viewing angle 40° x 100°

Applications

- Full color signs

Package Dimensions



Notes:
All dimensions in millimeters (inches).
Tolerance is ± 0.20mm unless other specified

Caution: *INGaN devices are Class 1C HBM ESD sensitive per JEDEC Standard. Please observe appropriate precautions during handling and processing. Refer to Application Note AN – 1142 for additional details.*

Device Selection Guide

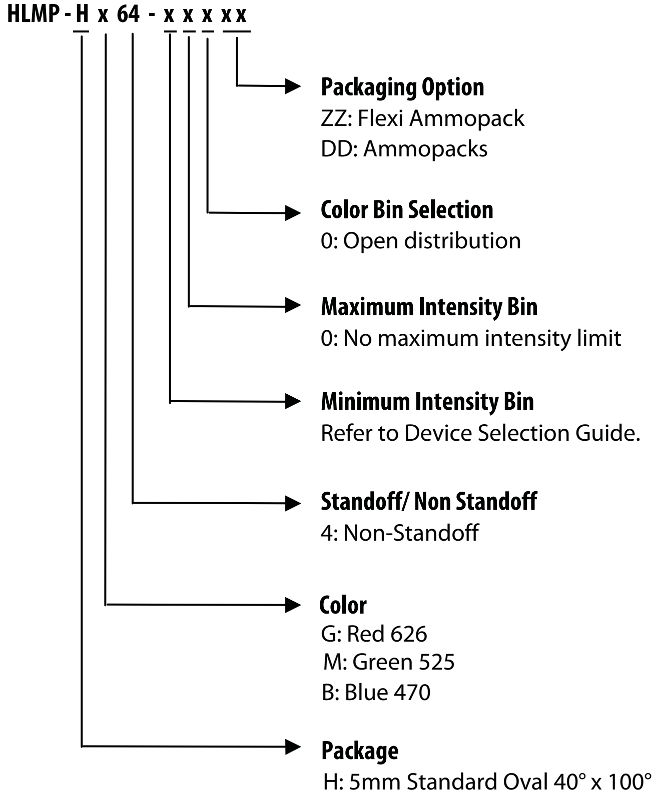
Part Number	Color and Dominant Wavelength λd (nm) Typ	Luminous Intensity Iv (mcd) at 20 mA-Min [1]	Luminous Intensity Iv (mcd) at 20 mA-Max [1]
HLMP-HG64-VY0xx	Red 626	1150	2400
HLMP-HM64-Y30xx	Green 525	1990	5040
HLMP-HB64-QU0xx	Blue 470	460	1150

Tolerance for each intensity limit is ± 15%.

Notes:

1. The luminous intensity is measured on the mechanical axis of the lamp package and it is tested in pulsing condition.

Part Numbering System



HLMP - H x 64 - x x x xx

Packaging Option
ZZ: Flexi Ammopack
DD: Ammopacks

Color Bin Selection
0: Open distribution

Maximum Intensity Bin
0: No maximum intensity limit

Minimum Intensity Bin
Refer to Device Selection Guide.

Standoff/ Non Standoff
4: Non-Standoff

Color
G: Red 626
M: Green 525
B: Blue 470

Package
H: 5mm Standard Oval 40° x 100°

Note:
Please refer to AB 5337 for complete information about part numbering system.

Absolute Maximum Ratings

$T_J = 25°C$

Parameter	Red	Green and Blue	Unit

Dominant Wavelength [1]	λ_d				nm	I_F = 20 mA
Red		618	626	630		
Green		520	525	540		
Blue		460	470	480		
Peak Wavelength						
Red	λ_{PEAK}		634		nm	Peak of Wavelength of
Green			516			Spectral Distribution
Blue			464			at I_F = 20 mA
Thermal Resistance	$R\theta_{J\text{-}PIN}$		240		°C/W	LED Junction-to-Pin
Luminous Efficacy [2]						
Red	η_V		150		lm/W	Emitted Luminous
Green			530			Power/Emitted Radiant
Blue			65			Power

Notes:
1. The dominant wavelength is derived from the chromaticity Diagram and represents the color of the lamp
2. The radiant intensity, Ie in watts per steradian, may be found from the equation $Ie = I_V/\eta_V$ where I_V is the luminous intensity in candelas and η_V is the luminous efficacy in lumens/watt.

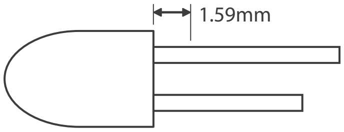
Precautions:

Lead Forming:

- The leads of an LED lamp may be preformed or cut to length prior to insertion and soldering on PC board.
- For better control, it is recommended to use proper tool to precisely form and cut the leads to applicable length rather than doing it manually.
- If manual lead cutting is necessary, cut the leads after the soldering process. The solder connection forms a mechanical ground which prevents mechanical stress due to lead cutting from traveling into LED package. This is highly recommended for hand solder operation, as the excess lead length also acts as small heat sink.

Soldering and Handling:

- Care must be taken during PCB assembly and soldering process to prevent damage to the LED component.
- LED component may be effectively hand soldered to PCB. However, it is only recommended under unavoidable circumstances such as rework. The closest manual soldering distance of the soldering heat source (soldering iron's tip) to the body is 1.59mm. Soldering the LED using soldering iron tip closer than 1.59mm might damage the LED.



- ESD precaution must be properly applied on the soldering station and personnel to prevent ESD damage to the LED component that is ESD sensitive. Do refer to Avago application note AN 1142 for details. The soldering iron used should have grounded tip to ensure electrostatic charge is properly grounded.
- Recommended soldering condition:

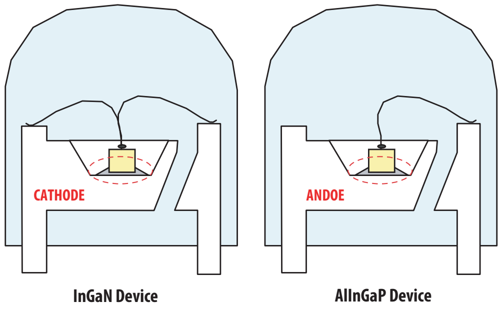
	Wave Soldering [1, 2]	**Manual Solder Dipping**
Pre-heat temperature	105 °C Max.	-
Preheat time	60 sec Max	-
Peak temperature	260 °C Max.	260 °C Max.
Dwell time	5 sec Max.	5 sec Max

Note:
1. Above conditions refers to measurement with thermocouple mounted at the bottom of PCB.
2. It is recommended to use only bottom preheaters in order to reduce thermal stress experienced by LED.

- Wave soldering parameters must be set and maintained according to the recommended temperature and dwell time. Customer is advised to perform daily check on the soldering profile to ensure that it is always conforming to recommended soldering conditions.

Note:
1. PCB with different size and design (component density) will have different heat mass (heat capacity). This might cause a change in temperature experienced by the board if same wave soldering setting is used. So, it is recommended to re-calibrate the soldering profile again before loading a new type of PCB.
2. Avago Technologies' AllnGaP high brightness LED are using high efficiency LED die with single wire bond as shown below. Customer is advised to take extra precaution during wave soldering to ensure that the maximum wave temperature does not exceed 260°C and the solder contact time does not exceeding 5sec. Over-stressing the LED during soldering process might cause premature failure to the LED due to delamination.

Avago Technologies LED configuration



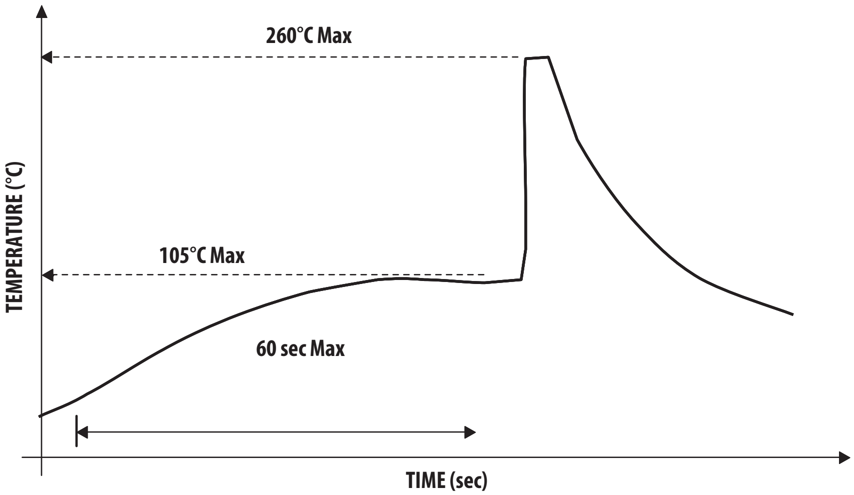
- Any alignment fixture that is being applied during wave soldering should be loosely fitted and should not apply weight or force on LED. Non metal material is recommended as it will absorb less heat during wave soldering process.
- At elevated temperature, LED is more susceptible to mechanical stress. Therefore, PCB must allowed to cool down to room temperature prior to handling, which includes removal of alignment fixture or pallet.
- If PCB board contains both through hole (TH) LED and other surface mount components, it is recommended that surface mount components be soldered on the top side of the PCB. If surface mount need to be on the bottom side, these components should be soldered using reflow soldering prior to insertion the TH LED.
- Recommended PC board plated through holes (PTH) size for LED component leads.

LED component lead size	**Diagonal**	**Plated through hole diameter**
0.45 x 0.45 mm (0.018x 0.018 inch)	0.636 mm (0.025 inch)	0.98 to 1.08 mm (0.039 to 0.043 inch)
0.50 x 0.50 mm (0.020x 0.020 inch)	0.707 mm (0.028 inch)	1.05 to 1.15 mm (0.041 to 0.045 inch)

- Over-sizing the PTH can lead to twisted LED after clinching. On the other hand under sizing the PTH can cause difficulty inserting the TH LED.

Refer to Application Note 5334 for more information about soldering and handling of high brightness TH LED lamps.

Example of Wave Soldering Temperature Profile for TH LED



Recommended solder:
Sn63 (Leaded solder alloy)
SAC305 (Lead free solder alloy)

Flux: Rosin flux

Solder bath temperature: 255°C ± 5°C
(maximum peak temperature = 260°C)

Dwell time: 3.0 sec - 5.0 sec
(maximum = 5sec)

Note: Allow for board to be sufficiently cooled to room temperature before exerting mechanical force.

BIN:

(i) Color bin only or VF bin only

(Applicable for part number with color bins but without VF bin OR part number with VF bins and no color bin)

OR

(ii) Color bin incorporated with VF Bin

(Applicable for part number that have both color bin and VF bin)

Example:

(i) Color bin only or VF bin only

BIN: 2 (represent color bin 2 only)

BIN: VB (represent VF bin "VB" only)

(ii) Color bin incorporate with VF Bin

BIN: 2VB

VB: VF bin "VB"

2: Color bin 2 only
