

SFH757 and SFH757V

Transmitter for Polymer Optical Fiber Applications

Data Sheet

Description

The SFH757 is a low-cost transmitter diode for optical data transmission with polymer optical fiber. Its InGaAlP LED chip provides enhanced resistance to humidity and is designed to emit light at 650 nm. The robust SFH757 can be used for speeds up to 100 MBd and complements the Avago SFH250 photodiode receiver and SFH551/1-1 integrated photo detector receiver.

The SFH series is optimized for easy coupling. No fiber stripping is required; just insert the cut fiber into the selected SFH component.

SFH757

The transparent plastic package has an aperture where a 2.2 mm fiber end can be inserted. This very easy coupling method is extremely cost-effective.

SFH757V

The V-housing allows easy coupling of unconnectorized 2.2 mm polymer optical fiber with an axial locking screw.

Ordering Information

SFH757

SFH757V

Type	Ordering Code
SFH757	SP000063871
SFH757V	SP000063858

Features

- High speed transmitter for up to 100MBd applications (with peaking circuits)
- 2.2mm aperture holds standard 980/1000/2200µm plastic fibers
- No fiber stripping required
- Molded microlens for efficient coupling

Plastic Direct Fiber Connector housing (V-housing)

- Locking screw attached to the connector
- Interference-free transmission by the light-tight housing
- Transmitter and receiver can be positioned flexibly
- No cross talk
- Auto insertable and wave solderable
- Supplied in tubes

Applications

- Household electronics
- Power electronics
- Optical networks
- Light barriers

5341	Information about Basic and Special Circuits for Transmitter and Receiver of the SFH series

Package Dimensions

SFH757

Dimensions in mm

SFH757V

Dimensions in mm

Package V-housing Color

SFH V-series components are color coded just like other Avago fiber optic components. The SFH757V transmitter has a white colored housing; the SFH250V and SFH551/1-1V receiver components have a black colored housing. This prevents mistakes while making connections. Product designation and date of manufacture are printed on the housing.

Package V-housing mounting pins

SFH V-series components have two pins that are electrically isolated from the inner circuit. The pins are only designed for mounting the V-housing to the PCB surface. This helps increase stability, which is needed during fixing the fiber end by the axial locking screw.

The retention force between the soldered mounting pins and the V-housing of the SFH component is about 20 N (with a vertical exertion of force). This is an approximate value.

Package V-housing axial locking screw

Components of the SFH V-series are equipped with an axial locking screw for easy coupling to the unconnectorized 2.2 mm polymer optical fiber. The force that is necessary to pull a jammed fiber out of the V-housing is typically 50 N (with a torque of 15 cNm for tightening the locking screw). This is an approximate value that is very dependent on the fiber and torque combination.

Package V-housing mounting pins

Package V-housing axial locking screw

Technical Data

Absolute Maximum Ratings

Parameter	Symbol	Min	Typ	Max	Unit	Notes	Figure
Operating Temperature range	T _C	-40		+85	°C		
Storage Temperature range	T _{stg}	-40		+100	°C		
Junction Temperature	T _J			+100	°C		
Soldering Temperature (2mm from case bottom, t≤5s)	T _S			+260	°C		
Reverse Voltage	V _R			3	V		
Forward Current	I _F			50	mA		
Power Dissipation	P _{tot}			120	mW		
Thermal Resistance (Junction/Air)	R _{thJA}			450	K/W		1
Electrostatic Discharge Voltage Capability	ESD			2000	V	1	
Electrostatic Discharge Voltage Capability	ESD			400	V	2

Forward Voltage Temperature Coefficient	T _{VF}	-1.8	mV/K		
Wavelength Temperature Coefficient	T _λ	0.16	nm/K		

* Typical value = mean value at T_A = 25°C

Notes:

- Given switching time values can be reduced by suitable driver circuits. Also an increase of LED-Current leads to a reduction of the switching times.
- Measured at 25°C
- The optical output power coupled into a polymere optical fiber (NA=0.5) is measured with a large area detector at the end of a short fiber (about 1m).
- Driver circuit for the characterization process: see Figure 2 (V_{cc}=5.0V; installed R_{ILED} = 100Ω)
- Value_{dBm}=10*log(Value_{measured}/1mW)
- Only valid for a used LED-current in the range of 10mA to 50mA (DC-Current). Optical Power Temperature Coefficient for temperatures between -40°C and 25°C is almost 0%/K.
- Value for +25°C to +85°C
