The TFP series is designed for mounting in shallow electric control cabinets with low profile depth and DIN RAIL or wall mounting. The unique thermo-mechanical construction combines optimized heat transfer of power components and high mechanical ruggedness for operation in harsh mechanical and ambient temperature environments. Most efficient circuit topologies keep the heat dissipation very low and the conversion efficiency high. The compact size is a further feature of this highly reliable power supply. The power supply can deliver high overload currents for limited periods and provides very high currents for short durations to trip fuses to achieve selective fuse breaking while supplying various loads. A built in active Isolation Diode allows applications in power supply systems with bus structures.

This power supply line can also integrate a wide range of functional features for additional system solutions:

**Current share module** for true current sharing with internal house keeping parameters through CAN, LAN or Optocoupler

**Battery charger module** to convert the unit into a battery charger

In addition there are some external modules for USP purposes:

**USP modules** for operation with UltraCap or Battery

**Fig 1** Current capability

**Fig 2** Output Current at short circuit

Explanation of Current capability:

**Peak Current:** This current is used to deliver a high current pulse for a very short time duration that is sufficient to trip an appropriately selected magnetic trip switch or blow a DC bus fuse.

**Boost Current:** This current is provided for several seconds to absorb temporary and transient peak load demands such as: the startup of motors, or the startup of large capacitive loads, or the start up or On/Off switching of DC/DC converters, or other infrequent repetitive overload demands.

**Nominal Current:** This current is supplied on a continuous basis according to the rating diagram.
