

US159-DA14531EVZ

DA14531 Pmod™ Board

The US159-DA14531EVZ is a low power Bluetooth Pmod module that enables you to add a low power Bluetooth™ capability to any evaluation kit or MCU board equipped with a Pmod expansion capability. The board provides a standard Pmod Type 3A (expanded UART) connection for the on-board Bluetooth 5.1 module.

The US159-DA14531EVZ features a Type 3A Pmod connector and incorporates the DA14531 SmartBond TINY™ Module, which uses the efficient Bluetooth 5.1 SoC. With a standard connector and software support, the US159-DA14531EVZ is ideal for the Renesas Quick-Connect IoT to rapidly create an IoT system.

Kit Contents

- US159-DA14531EVZ Pmod Board

Features

- DA14531 SmartBond TINY Module
 - Cortex M0+ at 16 MHz
 - Memory: 4kB RAM, 32kB OTP and 1Mb Flash
 - Bluetooth 5.1 core qualified
 - Integrated chip antenna
 - Worldwide certification
 - IoTMark™, BLE score of 18300
 - 3.3V supply voltage
 - +2.2dBm maximum output power
 - -93dBm sensitivity
 - Rx current 2mA at 3.3V
 - Tx current 4mA at 3.3V at 0dBm
- Standardized Type 3A Pmod connector supports an expanded UART interface
- Optional battery operation with on-board CR1220 coin cell
- Momentary pushbutton switch (SW1) to aid in user software debug
- LED (D1) to aid in user software debug
- 10-pin 1.27mm pitch Arm Cortex-Debug connector (J2) for software development and debug support

1. Functional Description

The US159-DA14531EVZ module functions as a Bluetooth wireless building block to create a custom IoT system solution. This module adds Bluetooth connectivity capability to any IoT system that supports Pmod expansion modules. Visit the Renesas [website](#) for more details on the DA14531 SmartBond TINY Module.

2. Setup

2.1 Required or Recommended User Equipment

The following additional lab equipment is recommended using the module (and is sold separately):

- Any MCU board that supports Type 3A Pmod.

2.2 Software Installation and Usage

For the latest version of the e2 studio, use the Renesas [website](#), and for the latest connectivity support and details on creating customized IoT system solutions, visit the Quick-Connect IoT [site](#).

The Renesas Flexible Software Package ([FSP](#)) is an enhanced software package that provides easy-to-use, scalable, high-quality software for embedded system designs using the Renesas RA family of Arm Microcontrollers. With the support of a new Arm TrustZone and other advanced security features, FSP provides a quick and versatile way to build secure, connected IoT devices using production-ready drivers, Azure RTOS, FreeRTOS, and other middleware stacks.

The firmware for evaluating the functioning of the module with a Renesas EK-RA2L1 evaluation kit and an HS3001 PMOD board (for temperature and humidity) is pre-loaded on the US159-DA14531EVZ Pmod module.

dsp_device_531_multi.bin	For DA14531 SmartBond TINY Module

For details on the application, see the [guide](#), *Quick-Connect IoT BLE Environmental Sensor Hub*.

2.3 Kit Hardware Connections

Follow these procedures to set up the kit as shown on [Figure 2](#).

1. Ensure the MCU evaluation kit being used has a Pmod connector set to Type 3A. (For help, refer to the kit hardware manual.)
2. Plug in the US159-DA14531EVZ to the Pmod connector on the MCU evaluation kit, and be careful to align Pin 1 on the module to Pin 1 on the MCU kit.
3. The US159-DA14531EVZ is now ready to be used in the system. Follow the MCU kit instructions for connecting and powering up the evaluation kit.

D1 – LED to aid in user software debug

J2 – Arm Cortex-debug connector

R14 – Be sure to remove before installing coin cell

SW1 – Momentary pushbutton switch to aid in user software debug

J1 – Pmod Connector to MCU Board

BT1 – Remove R14 before installing the CR1220 coin cell; be careful to observe polarity (+ on cell facing upwards)
