ZL9024MEVAL1Z

Evaluation Board

UG155
Rev.0.00
Jan 29, 2018

1. Overview

The [ZL9024M](#) is a 33A step-down DC/DC power supply module with an integrated digital PWM controller, single-phase synchronous power switches, inductors, and passives. Only input/output capacitors and minimal passives are needed to finish the design. 33A of continuous output current can be delivered without the need for airflow or a heatsink. The ZL9024M uses ChargeMode™ control (ASCR) architecture, which responds to a transient load within a single switching cycle.

The ZL9024MEVAL1Z evaluation board is a 3in x 4.5in 6-layer FR4 board with 2oz. copper on surface layers and 1oz. copper on buried layers. This evaluation board comes with placeholders for pin-strap resistor population to adjust output voltage, switching frequency, and device PMBus™ address. More configurations, such as sequencing, Digital-DC™ (DDC) bus configuration and fault limits can be easily programmed or changed through the PMBus compliant serial bus interface.

The optional ZLUSBEVAL3Z (USB to PMBus adapter) is provided with this evaluation board, which connects the evaluation board to a PC to activate the PMBus communication interface. The PMBus command set is accessed by using the PowerNavigator™ evaluation software from a PC running Microsoft Windows. The ZL9024MEVAL1Z can operate in pin-strap mode without needing the ZLUSBEVAL3Z adapter or PMBus communication.

1.1 Key Features

- V_{IN} range of 2.75V to 4V, V_{OUT} adjustable from 0.6V to 1.5V
- Programmable V_{OUT} , margining, input and output UVP/OVP, I_{OUT} limit, OTP/UTP, soft-start/stop, sequencing, and external synchronization
- Monitor: V_{IN} , V_{OUT} , V_{DRV} , I_{OUT} , temperature, duty cycle, switching frequency and faults
- ChargeMode control tunable with PMBus
- Mechanical switch for enable and power-good LED indicator

1.2 Specifications

This board has been configured for the following operating conditions by default:

- V_{IN} = 2.75V to 4V
- V_{OUT} = 1.2V
- I_{MAX} = 33A
- f_{SW} = 533kHz
- ASCR gain = 600, ASCR residual = 80
- On/off delay = 5ms; On/off ramp time = 5ms

1.3 Ordering Information

Part Number	Description
ZL9024MEVAL1Z	ZL9024M evaluation board, ZLUSBEVAL3Z adapter, USB cable

1.4 Related Literature

- For a full list of related documents, visit our website
- [ZL9024M](#) product page

Figure 1. ZL9024MEVAL1Z Block Diagram

1.5 Recommended Equipment

- DC power supply with two channels or two separate DC power supplies with minimum 6V/20A sourcing capacity and 6V/0.5A sourcing capabilities, respectively
- Electronic load capable of sinking current up to 33A
- Digital Multimeters (DMMs)
- Oscilloscope with higher than 100MHz bandwidth

2. Functional Description

The ZL9024MEVAL1Z provides all circuitry required to evaluate the features of the ZL9024M. A majority of the features of the ZL9024M, such as compensation-free ChargeMode control, soft-start delay and ramp times, supply sequencing and voltage margining are available on this evaluation board. For sequencing evaluation, the board can be connected to any Intersil digital module evaluation board that supports the DDC bus.

[Figure 3 on page 8](#) and [Figure 4 on page 9](#) show the ZL9024MEVAL1Z evaluation board.

2.1 Operating Range

By default, the ZL9024M is configured to operate at $V_{OUT} = 1.2V$, $f_{SW} = 533kHz$. V_{IN} ranges can be from 2.75V to 4V. The board can also support a wider operating range to meet the requirements of specific applications. V_{OUT} can be adjusted from 0.6V to 1.5V. The load current range is from 0A to 33A. The f_{SW} and output voltage can also be tuned. However, to ensure sufficient stability margins, switching frequency and output capacitors can be selected using the “ZL9024M Design Guide Matrix and Output Voltage Response” table in the [ZL9024M](#) datasheet.

The ZL9024MEVAL1Z is capable of handling a 0A to 33A output current transient, in which the slew rate is less than 2A/ μs , such as electronic load. If the slew rate exceeds 2A/ μs , then it may be necessary to increase the output capacitance or change $VOUT_OV_FAULT_LIMIT$ and $VOUT_UV_FAULT_LIMIT$ values for proper operation. Refer to “[PMBus Option](#)” on [page 5](#) for more information.

If external synchronization is used, connect the SYNC test point to the external clock. Note that the external clock signal should be active before the module is enabled.

2.2 Quick Start Guide

2.2.1 Pin-Strap Option

The ZL9024MEVAL1Z can be configured in pin-strap mode with standard 1% 0603 resistors. The PMBus interface is not required to evaluate the ZL9024MEVAL1Z in pin-strap mode. Output voltage (V_{OUT}), switching frequency (f_{SW}), and the device PMBus address can be changed by populating recommended resistors at placeholders provided in the evaluation board. By default, the evaluation board operates in pin-strap mode and regulates at $V_{OUT} = 1.2V$, $f_{SW} = 533kHz$, and PMBus address = 28h. Complete the following steps to evaluate the ZL9024MEVAL1Z in pin-strap mode.

- (1) Set the ENABLE switch to “DISABLE”.
- (2) Connect the load to the VOUT lug connectors (J7 and J8).
- (3) Connect the power supply to the VIN connectors (J3 and J4). Make sure the power supply is not enabled when making the connections.
- (4) Connect the VDD voltage supply to the VDD connectors (J9 and J10). Make sure the power supply is not enabled when making the connections.
- (5) Turn on the VIN power supply first, then turn on the VDD power supply.
- (6) Set the ENABLE switch to “ENABLE”.
- (7) Measure 1.2V V_{OUT} at the probe point labeled “VOUT” (J16).
- (8) Observe the switching frequency of 533kHz at the probe points labeled “VSWH” (J15).
- (9) To change V_{OUT} , disconnect the board from the setup and populate a 1% standard 0603 resistor at the R6 placeholder location on the bottom layer. Refer to the “Output Voltage Resistor Settings” table in the [ZL9024M](#) datasheet for recommended values. By default, $VOUT_MAX$ is set to 110% of V_{OUT} set by the pin-strap resistor.
- (10) To change the switching frequency, disconnect the board from the setup and populate a 1% standard 0603 resistor at the R2 placeholder location on the bottom layer. Refer to the “Switching Frequency Resistor Settings” table in the [ZL9024M](#) datasheet for recommended values.

2.2.2 PMBus Option

The ZL9024MEVAL1Z can be evaluated for all features using the provided ZLUSBEVAL3Z dongle and PowerNavigator evaluation software. PowerNavigator tutorial videos are available at www.intersil.com/powernavigator. Complete the following steps to evaluate the ZL9024MEVAL1Z with the PMBus option.

- (1) Install PowerNavigator software from the following website: www.intersil.com/powernavigator.
- (2) Set the ENABLE switch to “DISABLE”.
- (3) Connect the load to the VOUT lug connectors (J7 and J8).
- (4) Connect the power supply to the VIN connectors (J3 and J4). Make sure the power supply is not enabled when making the connections.
- (5) Connect the VDD voltage supply to the VDD connectors (J9 and J10). Make sure the power supply is not enabled when making the connections.
- (6) Connect the ZLUSBEVAL3Z dongle (USB to PMBus adapter) to the ZL9024MEVAL1Z board using the 6-pin male connector labeled “PMBus DONGLE IN”.
- (7) Turn the power supply on.
- (8) Connect the supplied USB cable from the computer USB port to the ZLUSBEVAL3Z dongle.
- (9) Start PowerNavigator.
- (10) It is optional to load a predefined setup from a configuration file using PowerNavigator. The ZL9024M device on the board operates in pin-strap mode from factory default, but the user can modify the operating parameters through the evaluation software or by loading a predefined set-up from a configuration file. A sample [“Configuration File” on page 7](#) is provided and can be copied to a plain text editor to make desired changes. The default pin-strap configurations will be overwritten if a user-defined configuration file is loaded.
- (11) Set the ENABLE switch to “ENABLE”. Alternatively, the PMBus ON_OFF_CONFIG and OPERATION commands may be used from PowerNavigator to allow PMBus Enable.
- (12) Monitor and configure the ZL9024MEVAL1Z board using the PMBus commands in the evaluation software. To store the configuration changes, disable the module and use the command STORE_USER_ALL. To restore factory default settings, disable the module and use the command RESTORE_FACTORY and STORE_USER_ALL.
- (13) For sequencing with the Digital-DC Bus (DDC) or to evaluate multiple Renesas digital power products using a single ZLUSBEVAL3Z dongle, the ZL9024M can be daisy chained with other digital power evaluation boards. The PMBus address can be changed by placing a 1% standard 0603 resistor at the R₄ placeholder location on the bottom layer. Refer to the “SMBus Address Resistor Selection” table in the [ZL9024M](#) datasheet for recommended values.

3. Evaluation Board Information

If external synchronization is used, connect the SYNC test point to the external clock. Note that the external clock signal should be active before the module is enabled.

3.1 V_{OUT} Transient Response Check

The ZL9024MEVAL1Z board has a built-in transient load test circuit (see the schematic in [Figure 2](#)) allowing transient load with a high slew rate. A 100A N-Channel MOSFET (Manufacturer PN: BSC010NE2LSI) is connected across V_{OUT} and PGND next to the remote voltage sensing location. A 10m Ω current-sense resistor R_{16} is used to monitor the drain-to-source current of the MOSFET. For a transient load test, inject the gate drive pulse signal at J12. The load current can be monitored through J13. Because the MOSFET will operate in the saturation region instead of the linear region when the gate turn-on signal is applied, the pulse width and duty cycle of the gate signal must be limited small enough to avoid MOSFET overheating (recommended duty cycle should be less than 2%). The amplitude of the gate driver pulse voltage can be adjusted to obtain a desired transient load current step size.

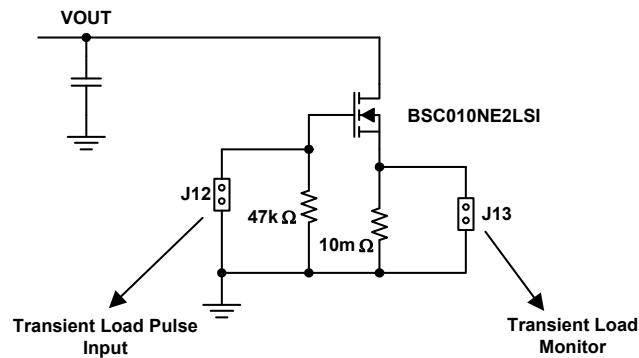

Figure 2. Schematic for Transient Load Measurement

3.2 Thermal Considerations and Current Derating

Board layout is critical to make the module operate safely and deliver maximum allowable power. To work in the high temperature environments and carry large currents, the board layout needs to be carefully designed to maximize thermal performance. To achieve this, select enough trace width, copper weight, and the proper connectors.

The ZL9024MEVAL1Z evaluation board is designed to run at 33A at room temperature without additional cooling systems needed. However, if the output voltage is increased or the board is operated at elevated temperatures, then the available current is derated. Refer to the derated current curves in the [ZL9024M](#) datasheet to determine the maximum output current the evaluation board can supply. θ_{JA} is measured by inserting a thermocouple inside the module to measure peak junction temperature.

4. Configuration File

The following is a sample configuration file for the ZL9024M. Copy and paste (from RESTORE_FACTORY TO ### End User Store) to a plain text file and save it as **Confile_file_name.txt**. The # symbol is used for a comment line. The following settings are already loaded to ZL9024M as factory defaults.

```

RESTORE_FACTORY                # Resets device to the factory setting

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
 2. Renesas Electronics hereby expressly disclaims any warranties against liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
 3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
 4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
 5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.

"Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.

"High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.

Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
 6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
 7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
 8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
 9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
 10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
 11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
 12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.
- (Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.
- (Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.

(Rev.4.0-1 November 2017)
