## Performance Curves

Maximum Pulse Collector Current  
(Conductive Capability in Strobe Flash Circuit)

## Application Example

## Precautions on Usage

1. IGBT has MOS structure and its gate is insulated by thin silicon oxide. So please handle carefully to protect the device from electrostatic charge.
2. Gate drive voltage during on-period must be applied to satisfy the rating of maximum pulse collector current. And turn-off  $dv/dt$  must become less than 400 V/ $\mu$ s. In general, when  $R_{G(off)} = 68 \Omega$ , it is satisfied.
3. The operation life should be endured until repeated discharge of 5,000 times under the charge current ( $I_{Xe} \leq 150$  A : full luminescence condition) of main capacitor. Repetition period under full luminescence condition is over 3 seconds.
