

RL78/G14 CPU Card

R12UZ0023EJ0100

Rev.1.00

User's Manual

Sep 04, 2017

For Your Safety

Do not fail to read this manual before using the RL78/G14 CPU Card (RTK0EML130C06000BJ) (the product).

- Follow the indications in this manual when using the product.
- This product is the option board of "24V Motor Control Evaluation System for RX23T (RTK0EM0006S01212BJ)". Please read "Warnings Regarding Use of the Product" of the 24V Motor Control Evaluation System for RX23T User's Manual, and use this product.
- Keep this manual near the product so you can refer to it whenever necessary.
- Transfer or sale of the product to third parties is prohibited without written approval.
- The purchaser or importer of the product is responsible for ensuring compliance with local regulations. In addition, the customer is responsible for ensuring that the product is handled correctly and safely, in accordance with the laws of the customer's country (region).
- All information contained in this manual represents information on products at the time of publication of this manual. Please note that the product data, specification, sales offices, contents of website, address, etc., are subject to change by Renesas Electronics Corporation without notice due to product improvements or other reasons. Please confirm the latest information on Renesas Electronics website.
- The manual for the product, and specification (the documents) are the tool that was developed for the function and performance evaluation of Renesas Electronics semiconductor device (Renesas Electronics device) mounted on the product, and not guarantee the same quality, function and performance.
- By purchasing the product or downloading the documents from Renesas Electronics website, the support services provided from Renesas Electronics is not guaranteed.

Meaning of Notations

In this manual items related to the safe use of the product are indicated as described below.

The degree of injury to persons or damage to property that could result if the designated content in this manual is not followed is indicated as follows.

 Danger	Indicates content that, if not followed, could result in death or serious injury* ¹ to the user, and which is highly urgent.
 Warning	Indicates content that, if not followed, could result in death or serious injury to the user.
 Caution	Indicates content that, if not followed, could result in injury* ² to persons or physical damage.* ³

Note 1. Serious injury refers to conditions resulting in persistent after-effects and for which treatment would necessitate hospitalization or regular hospital visits, such as loss or impairment of eyesight, burns (high- or low-temperature), electric shock, bone fracture, or poisoning.

Note 2. Injury refers to conditions for which treatment would necessitate hospitalization or regular hospital visits.

Note 3. Physical damage refers to damage affecting the wider surroundings, such as the user's home or property.

Requirements related to the handling of the product are classified into the following categories.

- Marks indicating that an action is prohibited.

	General Prohibition The indicated action is prohibited.		Example: Do Not Touch! Touching the specified location could result in injury.
---	---	---	--

- Marks indicating that an action is prohibited.

	General Caution Indicates a general need for caution that is not specified.		Example: Caution – Hot! Indicates the possibility of injury due to high temperature.
---	---	---	--

- Marks directing that the specified action is required.

	General Instruction The specified action is required.		Example: Turn Off (Disconnect) Power Supply! Instructs the user to turn off (disconnect) the power supply to the product.
---	---	---	---

Warnings Regarding Use of the Product

■ Danger Items

 Danger	
  	• The product should be used only by persons (users) having a thorough knowledge of electrical and mechanical components and systems, a full knowledge of the risks associated with handling them, and training in inverter motor control and handling motors, or equivalent skills. Users should be limited to persons who have carefully read the Caution Items contained in this manual. • Unlike typical equipment, the product has no protective case to ensure safety, and it contains moving parts and high-temperature components that could be dangerous. Do not touch the evaluation board or cables while power is being supplied. • Carefully check to make sure that there are no pieces of conductive materials or dust adhering to the board, connectors, and cables. • There are moving parts, driven by a motor. Do not touch the motor while power is being supplied. • Ensure that the motor is insulated and placed in a stable location before supplying power.
	Do Not Connect Load to Motor! • This could cause fire, burns, or injury.

■ Warning Items

 Warning	
	Caution – Rotating Parts! The system includes a motor. Touching the rotating shaft could cause high-temperature burns or injury.
	Always insert plugs, connectors, and cables securely, and confirm that they are fully inserted. Incomplete connections could cause fire, burns, electric shock, or injury.
	Use the power supply apparatus specified in the manual. Failure to do so could cause fire, burns, electric shock, injury, or malfunction.
	Disconnect the power supply and unplug all cables when the system will not be used for a period of time or when moving the system. - Failure to do so could cause fire, burns, electric shock, or malfunction. - This will protect the system against damage due to lightning.
	Use a mechanism (switch, outlet, etc.) located within reach to turn off (disconnect) the power supply. In case of emergency, it may be necessary to cut off the power supply quickly.
	Turn off the power supply immediately if you notice abnormal odor, smoke, abnormal sound, or overheating. Continuing to use the system in an abnormal condition could cause fire, burns, or electric shock.
	Do Not Disassemble, Modify, or Repair! Doing so could cause fire, burns, electric shock, injury, or malfunction.
	Do not use the product for any purpose other than initial evaluation of motor control in a testing room or lab. Do not integrate the product or any part of it into other equipment. Do not insert or remove cables or connectors when the product is powered on. - The product has no safety case. - Failure to observe the above could cause fire, electric shock, burns, or malfunction. - The product may not perform as expected if used for other than its intended purpose.

■ Caution Items

 Caution	
	Caution – Hot! The motor gets hot. Touching it could cause high-temperature burns.
	Follow the procedure specified in the manual when powering the system on or off. Failure to do so could cause overheating or malfunction.
	Caution – Static Electricity Use the antistatic band. Failure to do so could cause malfunction or unstable motion.

Overview

The RL78/G14 CPU Card (RTK0EML130C06000BJ) is an optional board for use with the 24V Motor Control Evaluation System for RX23T (RTK0EM0006S01212BJ) (the Motor RSK). The Motor RSK comprises a 24V system inverter board (RTK0EM0001B00012BJ) (the INV-BRD) and a RX23T CPU Card (RTK0EM0013C01201BJ) (the RX23T-CRD). By replacing the RX23T-CRD with the product, motor evaluation can be performed using the RL78/G14.

An E1 emulator and equipment related to the Motor RSK must be provided by the customer.

This user's manual describes the proper handling of the product. Content related to the product is presented in chapters 1 to 4 and 6 to 8. Content related to connection of the INV-BRD supplied with the Motor RSK is presented in chapter 5. For details of the operation of the INV-BRD, refer to the Motor RSK user's manual (R20UT3697EJ).

1. Features

1. Populated with RL78/G14 16-bit microcontroller suitable for inverter control.
2. CPU Card designed specifically for use with INV-BRD supplied with Motor RSSK.
3. Supports writing of software to flash memory using the E1 emulator.
4. Equipped with Hall sensor input connector and encoder input connector.
5. Equipped with serial communication connector.

2. Specifications

2.1 Specification

Table 2.1 Overview of RL78/G14 CPU Card Specifications

Item	Specification
Product name	RL78/G14 CPU Card
Board product No.	RTK0EML130C06000BJ
Supported inverter board / product No.	Supplied with 24V Motor Control Evaluation System for RX23T 24V Inverter Board / RTK0EM0001B00012BJ
Exterior view	

Note: Appearance of actual product may differ from photo.

MCU	Product group	RL78/G14 group
	Product No.	R5F104LEAFB
	CPU max. operating frequency	32 MHz
	Bit count	16 bits
	Package / Pin count	LFQFP / 64 pins
	ROM	64 KB
	RAM	5.5KB*2
MCU input clock		— (DNF : does not fit by default)*3
Input power supply voltage		DC 5 V (±5%) Selectable among the following: • Power supply from supported inverter board • Power supply from E1*1
Supported sensors		Hall sensor, encoder (through holes provided for signal monitoring test pins)
Supported emulator		E1 emulator
Connectors		• Inverter board connectors × 2 • Serial communication connectors × 2 • E1 connector • Hall sensor signal input connector • Encoder signal input connector
Switch		MCU external reset switch
LEDs		User control LEDs × 2
Operating temperature		Room temperature
Operating humidity		No condensation

Note 1. Power supply from the E1 emulator is only supported for standalone operation. Power supply from the E1 emulator is not supported when the INV-BRD is connected.

Note 2. The flash library uses the RAM in self-programming and rewriting of the data flash memory. For the RAM areas used by the flash library, see the Self RAM List of Flash Self-Programming Library for RL78 Family (R20UT2944).

Note 3. Mount a crystal oscillator to Y1 of the CPU Card when using a crystal oscillator. And, mount C5 and C6 condensers of appropriate capacity instead of R13 and R14.

2.2 Regulatory Compliance Notices

2.2.1 European Union regulatory notices

This product complies with the following EU Directives. (These directives are only valid in the European Union.)

CE Certifications:

- Electromagnetic Compatibility (EMC) Directive 2014/30/EU
EN61326-1 : 2013 Class A

WARNING: This is a Class A product. This equipment can cause radio frequency noise when used in the residential area. In such cases, the user/operator of the equipment may be required to take appropriate countermeasures under his responsibility.

4. Layout

Figure 4.1 RL78/G14 CPU Card Layout (Top View)

Figure 4.2 RL78/G14 CPU Card Layout (Bottom View)

5. Usage

5.1 Quick Start

5.1.1 Preparation

Obtain the Motor RSSK, and perform the steps described in 5.1.1 and 5.1.2, Quick Start, of the user's manual (R20UT3697EJ).

5.1.2 Replacing the CPU Card

Confirm that the INV-BRD is powered off, remove the RX23T-CRD from the INV-BRD, and connect the product in its place.

Figure 5.1 CPU Card replacement

5.1.3 Preparation for Operation Test

Perform the steps described in 5.1.3 to 5.1.5 of the Motor RSSK user's manual (R20UT3697EJ) to prepare for motor drive.

5.1.4 Operation Test

Perform the steps described in 5.1.6 to 5.1.9 of the Motor RSSK user's manual (R20UT3697EJ) in the order indicated, turn on the power supply, enable motor rotation, change the motor rotation speed, and stop motor rotation.

5.1.5 Finishing the Operation Test

After the operation test is finished, confirm that the motor shaft is no longer rotating and turn off the stabilized power supply output.

5.2 Operation

5.2.1 Basic Operation

Out of the box the product is programmed with hall 120-degree conducting control software for the RL78/G14. Table 5.1 lists the software specifications and the basic operations when connected to the INV-BRD.

Table 5.1 Initial Software Specifications

Item	Specification
Control method	Hall 120-degree conducting control
VR1	Clockwise turn: Motor shaft rotates clockwise. Counterclockwise turn: Motor shaft rotates counterclockwise.
SW1	ON: Motor rotation enabled OFF: Motor rotation disabled
SW2	Cancels error state: OFF → ON → OFF after an error:
LED1	ON: SW1 ON and normal state. OFF: SW1 OFF or error state.
LED2	ON: error state. OFF: normal state.

5.2.2 Canceling an Error State

If an error occurs, LED2 lights on the INV-BRD and the product, and motor rotation stops. To recover, it is necessary to turn off toggle switch SW1 and turn on toggle switch SW2 on the INV-BRD, and then turn off toggle switch SW2 again.

5.3 In Case of Abnormal Odor, Smoke, Abnormal Sound, Overheating, Etc.

The INV-BRD is equipped with a toggle switch (S1) to cut off the flow of current to the inverter. If an abnormal condition (such as abnormal odor, smoke, abnormal sound, or overheating) occurs, turn off S1 to cut off current flow to the inverter.

Figure 5.2 Cut off current

6. Functions

6.1 Power Supply

The product does not have a dedicated power supply connector. When connected to the INV-BRD it draws power via the connector. When not connected to the INV-BRD, it can draw power via the E1 connector. The product is not allowed to draw power via the E1 connector when it is connected to the INV-BRD.

6.2 Connecting the E1 Emulator

The E1 on-chip debugging emulator from Renesas Electronics is used to write software (program) to the flash memory of the RL78/G14. Software will be downloaded into the product via E1 emulator. It is also necessary to make the settings shown in Table 6.1 in the integrated development environment to enable the emulator to supply power to the product. Table 6.2 lists the pin assignments of the E1 connector.

Table 6.1 E1 Emulator Power Supply Settings

Connection to INV-BRD	Power Supply Setting of E1 Emulator
Connected	Power supply not allowed*1
Not connected	5 V power supply

Note 1. When connected to the INV-BRD, the product must draw power from the INV-BRD.

Table 6.2 Pin Assignments of E1 Connector (CN4)

Pin No.	Pin Function	RL78/G14 Connection Pins	Pin No.	Pin Function	RL78/G14 Connection Pins
1	NC	—	2	GND	EV _{SS0} /V _{SS}
3	NC	—	4	NC

7	NC	—	8	VDD	EV _{DD0} /V _{DD}
9	EMVDD	EV _{DD0}	10	RESET_OUT	$\overline{\text{RESET}}$
11	NC	—	12	GND	EV _{SS0} /V _{SS}
13	RESET_OUT	$\overline{\text{RESET}}$	14	GND	EV _{SS0} /V _{SS}

Note: See a supplement to the E1/E20 emulator user's manual (RL78 connection Guidelines)).

6.3 Connecting the Inverter Board

The product connects to the INV-BRD via the inverter board connectors (CNA and CNB). Table 6.3 and Table 6.4 list the pin assignments of the inverter board connectors.

Table 6.3 Pin Assignments of Inverter Board Connector (CNA)

Pin No.	Pin Function	RL78/G14 Connection Pins	Pin No.	Pin Function	RL78/G14 Connection Pins

17	VCCIO	EV _{DD0}	18	VCCIO	EV _{DD0}
19	GND	V _{SS}	20	GND	V _{SS}

6.4 Connecting the Serial Communication

The product communicates with the UART via the serial communication connectors. There are two serial communication connectors: CN2 and CN3. Table 6.5 lists their pin assignments. Use CN3 when using a tool such as waveform display in conjunction with the INV-BRD.

Table 6.5 Pin Assignments of Serial Communication Connectors (CN2, CN3)

Connector No.	Pin No.	Pin Function	RL78/G14 Connection Pins
CN2 SCI0	1	5V	EV _{DD0}
	2	RL78/G14 transmit side	P51/TxD0 ^{*1}
	3	RL78/G14 receive side	P50/RxD0 ^{*1}
	4	GND	EV _{SS0}
CN3 SCI2	1	5V	EV _{DD0}
	2	RL78/G14 transmit side	P77/TxD2 ^{*2}
	3	RL78/G14 receive side	P76/RxD2 ^{*2}
	4	GND	EV _{SS0}

Note 1. If you want to use this function, please be set to 0 PIOR01 bit of PIOR0 register.
Pin functions are changed to TxD0 (P17) and RxD0 (P16) by setting "1" the PIOR01 bit of the PIOR0 register.

Note 2. If you want to use this function, please be set to 1 PIOR01 bit of PIOR0 register.
Pin functions are changed to TxD2 (P13) and RxD2 (P14) by setting "0" the PIOR01 bit of the PIOR0 register.

6.5 Hall Sensor Signal Input

The product is equipped with a Hall sensor signal input connector. Using this connector it is possible to input the Hall sensor signal from the motor supplied with the Motor RSSK directly to the product. The signal input to the product is pulled up to 5 V and passed through an RC filter before being input to the RL78/G14. Table 6.6 lists the pin assignments of the Hall sensor signal input connector, and Table 6.7 lists connector information.

Table 6.6 Pin Assignments of Hall Sensor Signal Input Connector (CN5)

Pin No.	Pin Function	RL78/G14 Connection Pins
1	5V	EV _{DD0}
2	GND	EV _{SS0}
3	HU	P30 / INTP3
4	HV	P31 / INTP4
5	HW	P140 / INTP6

Table 6.7 Hall Sensor Signal Input Connector Information

Part	Product No.	Manufacturer
Connector (CN5)	B5B-XH-A	J.S.T. Mfg. Co. Ltd.

6.6 Encoder Signal Input

The product is equipped with an encoder signal input connector. This makes it possible to input the encoder signal to the RL78/G14. The signal input to the product is pulled up to 5 V and passed through an RC filter before being input to the RL78/G14. Table 6.8 lists the pin assignments of the signal input connector, and Table 6.9 lists connector information.

Table 6.8 Pin Assignments of Encoder Signal Input Connector (CN1)

Pin No.	Pin Function	RL78/G14 Connection Pins
1	5V	EV _{DD0}
2	GND	EV _{SS0}
3	A-phase	P00/TRGCLKA
4	B-phase	P01/TRGCLKB
5	Z-phase	P16

Table 6.9 Encoder Signal Input Connector Information

Part	Product No.	Manufacturer
Connector (CN1)	B5B-XH-A	J.S.T. Mfg. Co. Ltd.

6.7 Extension of Unused Pins

To facilitate general use of the product, the unused pins of the RL78/G14 are extended through universal area through holes in the board. Table 6.10 lists the pin assignments of the universal area through holes.

Table 6.10 Pin Assignments of Universal Area Through Holes (CN6)

Pin No.	RL78/G14 Connection Pins	Pin No.	RL78/G14 Connection Pins
1	V _{DD}	2	V _{DD}
3	EV _{SS0}	4	EV _{SS0}
5	P130	6	P04
7	P141	8	P43
9	P42	10	P41
11	P147	12	P146
13	P17 ^{*1}	14	NC
15	NC	16	NC
17	NC	18	NC
19	NC	20	NC
21	P70	22	P71
23	P72	24	P73
25	P74	26	P75
27	P63	28	P62
29	P61	30	P60
31	EV _{DD0}	32	EV _{DD0}
33	EV _{SS0}	34	EV _{SS0}

Note 1. P17 is separated from through-holes by unmounted 0 ohm resistors as a factory default.

6.8 Reset Circuit

The product is equipped with a reset circuit for resetting the MCU at power-on reset and external reset. To apply an external reset to the MCU, press the pushbutton (RESET1).

6.9 Crystal Resonator

A crystal oscillator (Y1) is not mounted on this product board as a factory default.

Considering treatment of unused pin, registers (R13, R14) are mounted instead of crystal load condensers (C5, C6).

If you use a crystal oscillator (Y1), connect a crystal oscillator (1-20MHz) to X2/X1 pin of MCU on the board.

HC-49/US SMD type is need when mounting.

Depending on the wiring and X2/X1 pin of MCU capacitance, mount an appropriate load condensers as C5 and C6 instead of R13 and R14.

6.10 LEDs

Two LEDs are mounted on the product for use in debugging programs and general system applications. Each turns on when the output on the corresponding port is low-level and turns off when the output is high-level. Table 6.11 lists the pin assignments corresponding to the LEDs.

Table 6.11 RL78/G14 CPU Card LED Connection Pin Assignments

Corresponding RL78/G14 Port		LED1	LED2
P52	High-level output	Off	—
	Low-level output	On	—
P53	High-level output	—	Off
	Low-level output	—	On

7. Details of RL78/G14 CPU Card

7.1 RL78/G14 Features

- The microcontroller which incorporated the RL78 CPU core, 16-bit CISC, and high-performance (max 32MHz)
- 3-phase motor control PWM output timer: 16-bit Timer RD (max 64MHz)
- 2-phase encoder timer: 16-bit Timer RG
- 10-bit resolution A/D converter (12 channels)

7.2 RL78/G14 Pin Assignments

60	P02/ANI17/SO10/TxD1	CNB-14 pin	N.C.
61	P01/TO00/TRGCLKB/TRJIO0	CN1-4 pin	Encoder (B-phase)
62	P00/TI00/TRGCLKA/(TRJO0)	CN1-3 pin	Encoder (A-phase)
63	P141/PCLBUZ1/INTP7	CN6-7 pin	N.C.
64	P140/PCLBUZ0/INTP6	CN5-5 pin	Hall sensor (W)

Note 1. Mounted on the 96 KB or more code flash memory products.

Note 2. Mounted on the 384 KB or more code flash memory products.

Note 3. P16 and P17 are separated from connector (CN2) by unmounted 0 ohm resistors as a factory default.

Note 4. P13 and P14 are separated from connector (CN3) by unmounted 0 ohm resistors as a factory default.

8. Caution Items

Caution items related to use of the product are as follows.

The product includes some unused pins that have not been processed. For information on accurate pin processing, refer to the hardware manual of the microcontroller.

General Precautions in the Handling of Microprocessing Unit and Microcontroller Unit Products

The following usage notes are applicable to all Microprocessing unit and Microcontroller unit products from Renesas. For detailed usage notes on the products covered by this document, refer to the relevant sections of the document as well as any technical updates that have been issued for the products.

1. Handling of Unused Pins

Handle unused pins in accordance with the directions given under Handling of Unused Pins in the manual.

- The input pins of CMOS products are generally in the high-impedance state. In operation with an unused pin in the open-circuit state, extra electromagnetic noise is induced in the vicinity of LSI, an associated shoot-through current flows internally, and malfunctions occur due to the false recognition of the pin state as an input signal become possible. Unused pins should be handled as described under Handling of Unused Pins in the manual.

2. Processing at Power-on

The state of the product is undefined at the moment when power is supplied.

- The states of internal circuits in the LSI are indeterminate and the states of register settings and pins are undefined at the moment when power is supplied.
In a finished product where the reset signal is applied to the external reset pin, the states of pins are not guaranteed from the moment when power is supplied until the reset process is completed. In a similar way, the states of pins in a product that is reset by an on-chip power-on reset function are not guaranteed from the moment when power is supplied until the power reaches the level at which resetting has been specified.

3. Prohibition of Access to Reserved Addresses

Access to reserved addresses is prohibited.

- The reserved addresses are provided for the possible future expansion of functions. Do not access these addresses; the correct operation of LSI is not guaranteed if they are accessed.

4. Clock Signals

After applying a reset, only release the reset line after the operating clock signal has become stable. When switching the clock signal during program execution, wait until the target clock signal has stabilized.

- When the clock signal is generated with an external resonator (or from an external oscillator) during a reset, ensure that the reset line is only released after full stabilization of the clock signal. Moreover, when switching to a clock signal produced with an external resonator (or by an external oscillator) while program execution is in progress, wait until the target clock signal is stable.

5. Differences between Products

Before changing from one product to another, i.e. to a product with a different part number, confirm that the change will not lead to problems.

- The characteristics of Microprocessing unit or Microcontroller unit products in the same group but having a different part number may differ in terms of the internal memory capacity, layout pattern, and other factors, which can affect the ranges of electrical characteristics, such as characteristic values, operating margins, immunity to noise, and amount of radiated noise. When changing to a product with a different part number, implement a system-evaluation test for the given product.

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
 2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other disputes involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawing, chart, program, algorithm, application examples.
 3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
 4. You shall not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copy or otherwise misappropriation of Renesas Electronics products.
 5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.

"Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots etc.

"High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.

Renesas Electronics products are neither intended nor authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems, surgical implantations etc.), or may cause serious property damages (space and undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for which the product is not intended by Renesas Electronics.
 6. When using the Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat radiation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions or failure or accident arising out of the use of Renesas Electronics products beyond such specified ranges.
 7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please ensure to implement safety measures to guard them against the possibility of bodily injury, injury or damage caused by fire, and social damage in the event of failure or malfunction of Renesas Electronics products, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures by your own responsibility as warranty for your products/system. Because the evaluation of microcomputer software alone is very difficult and not practical, please evaluate the safety of the final products or systems manufactured by you.
 8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please investigate applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive carefully and sufficiently and use Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
 9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall not use Renesas Electronics products or technologies for (1) any purpose relating to the development, design, manufacture, use, stockpiling, etc., of weapons of mass destruction, such as nuclear weapons, chemical weapons, or biological weapons, or missiles (including unmanned aerial vehicles (UAVs)) for delivering such weapons, (2) any purpose relating to the development, design, manufacture, or use of conventional weapons, or (3) any other purpose of disturbing international peace and security, and you shall not sell, export, lease, transfer, or release Renesas Electronics products or technologies to any third party whether directly or indirectly with knowledge or reason to know that the third party or any other party will engage in the activities described above. When exporting, selling, transferring, etc., Renesas Electronics products or technologies, you shall comply with any applicable export control laws and regulations promulgated and administered by the governments of the countries asserting jurisdiction over the parties or transactions.
 10. Please acknowledge and agree that you shall bear all the losses and damages which are incurred from the misuse or violation of the terms and conditions described in this document, including this notice, and hold Renesas Electronics harmless, if such misuse or violation results from your resale or making Renesas Electronics products available any third party.
 11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
 12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.
- (Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.
- (Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
