

SLG59M1735C

A 10.5 mΩ, 4 A Integrated Power Switch with Soft-start and Protection Features in WLCSP

General Description

The SLG59M1735C is a high performance 10.5 mΩ, 4 A single-channel nFET integrated power switch which can operate with a 2.5 V to 5.5 V V_{DD} supply to switch power rails from as low as 0.9 V up to the supply voltage. The SLG59M1735C incorporates two-level overload current protection, thermal shutdown protection, and soft-start control which can easily be adjusted by a small external capacitor.

Using a proprietary MOSFET design, the SLG59M1735C achieves its stable 10.5 mΩ $R_{DS(ON)}$ across a wide input voltage range. Through the application of Dialog's proprietary CuFET technology, the SLG59M1735C's can be used in high-current applications with a very-small 1.5 mm² WLCSP form factor.

Features

- Low $R_{DS(ON)}$ nFET: 10.5 mΩ
- Steady-state Operating Current: Up to 4 A
- Supply Voltage: 2.5 V ≤ V_{DD} ≤ 5.5 V
- Wide Input Voltage Range: 0.9 V ≤ V_D ≤ V_{DD}
- Capacitor-adjustable Soft-start Control
- Two-stage Overcurrent Protection:
 - Fixed 6 A Active Current Limit
 - Fixed 0.5 A Short-circuit Current Limit
- Thermal Shutdown Protection
- Operating Temperature: -40 °C to 85 °C
- 0.96 mm x 1.56 mm, 0.4mm pitch 8L WLCSP
 - Pb-Free / Halogen-Free / RoHS-Compliant

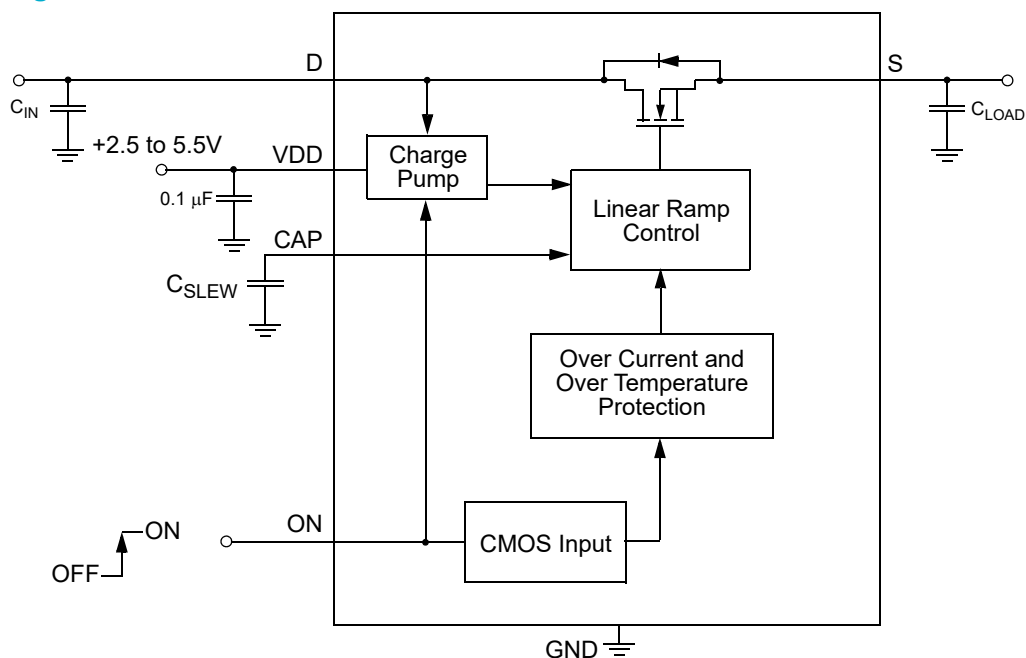

Pin Configuration

Applications

- Notebook Power Rail Switching
- Tablet Power Rail Switching
- Smartphone Power Rail Switching

Block Diagram

A 10.5 mΩ, 4 A Integrated Power Switch with Soft-start and Protection Features in WLCSP

Pin Description

Pin #	Pin Name	Type	Pin Description
A1	VDD	PWR	V _{DD} power for load switch control (2.5 V to 5.5 V)
B1	ON	Input	Turns MOSFET ON (4 MΩ pull down resistor) CMOS input with ON_V _{IL} < 0.3 V, ON_V _{IH} > 0.85 V
C1	D	MOSFET	Drain of Power MOSFET (fused with pin D1)
D1	D	MOSFET	Drain of Power MOSFET (fused with pin C1)
D2	S	MOSFET	Source of Power MOSFET (fused with pin C2)
C2	S	MOSFET	Source of Power MOSFET (fused with pin D2)
B2	CAP	Input	Capacitor for controlling power rail ramp rate
A2	GND	GND	Ground

Ordering Information

Part Number	Type	Production Flow
SLG59M1735C	WLCSP 8L	Industrial, -40 °C to 85 °C
SLG59M1735CTR	WLCSP 8L (Tape and Reel)	Industrial, -40 °C to 85 °C

A 10.5 mΩ, 4 A Integrated Power Switch with Soft-start and Protection Features in WLCSP

Absolute Maximum Ratings

Parameter	Description	Conditions	Min.	Typ.	Max.	Unit
V _{DD}	Power Supply		--	--	7	V
T _S	Storage Temperature		-65	--	150	°C
T _O	Operating Temperature		-40	--	85	°C
T _A	Rated Operating Temperature		-40	--	85	°C
ESD _{HBM}	ESD Protection	Human Body Model	2000	--	4	V
ESD _{CDM}	ESD Protection	Charged Device Model	500	--	6	V
MSL	Moisture Sensitivity Level		1			
θ _{JA}	Package Thermal Resistance, Junction-to-Ambient	0.96mm x 1.56mm WLCSP; Determined using 1 in ² , 1 oz. copper pads under each VD and VS on FR4 pcb material	--	100	--	°C/W
W _{DIS}	Package Power Dissipation		--	--	1	W
I _{DS} _{MAX}	Max Continuous Switch Current		--	--	4	A
MOSFET I _{DS} _{PK}	Peak Current from Drain to Source	Maximum pulsed switch current, pulse width < 1 ms, 1% duty cycle	--	--	6	A

Note: Stresses greater than those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

Electrical Characteristics

T_A = -40 °C to 85 °C (unless otherwise stated)

Parameter	Description	Conditions	Min.	Typ.	Max.	Unit
V _{DD}	Power Supply Voltage	-40 to 85°C	2.5	--	5.5	V
I _{DD}	Power Supply Current	when OFF	--	0.04	2	μA
		when ON	--	77	110	μA
R _{DS} _{ON}	ON Resistance	T _A 25°C, I _{DS} = 100 mA; V _{DD} = V _D = 5 V	--	10.5	12.1	mΩ
		T _A 85°C, I _{DS} = 100 mA; V _{DD} = V _D = 5 V	--	12.7	14.3	mΩ
V _D	Drain Voltage		0.9	--	V _{DD}	V
I _{FET_OFF}	MOSFET OFF Leakage Current	2.5V ≤ V _{DD} ≤ 5.5V; V _D = 4.35V, V _S = 0V; ON = LOW; T _A = 25°C	--	0.03	1	μA
I _{LIMIT}	Active Current Limit	MOSFET will automatically limit current when V _S > 250 mV	4.5	6.0	8	A
	Short Circuit Current Limit	MOSFET will automatically limit current when V _S < 250 mV	--	0.5	--	A
T _{ON_Delay}	ON Delay Time	50% ON to 10% V _S ↑; V _{DD} = V _D = 5 V; R _{LOAD} = 20 Ω, C _{LOAD} = 10 μF	--	220	400	μs
V _{S(SR)}	Slew Rate	10% V _S to 90% V _S ↑; Example: 10% V _S to 90% V _S ↑; V _{DD} = V _D = 5 V; C _{SLEW} = 3.9 nF R _{LOAD} = 20 Ω, C _{LOAD} = 10 μF	Set by External C _{SLEW} ¹		--	μs
			2.2	2.8	3.5	V/ms
T _{Total_ON}	Total Turn-on Time	50% ON to 90% V _S ↑	Set by External C _{SLEW} ¹		--	ms
		Example: 50% ON to 90% V _S ↑ V _{DD} = V _D = 5 V; C _{SLEW} = 3.9 nF R _{LOAD} = 20 Ω, C _{LOAD} = 10 μF	1.5	1.9	2.3	ms

SLG59M1735C Power-Up/Power-Down Sequence Considerations

To ensure glitch-free power-up under all conditions, apply V_{DD} first, followed by V_D after V_{DD} exceeds 1 V. Then allow V_D to reach 90% of its max value before toggling the ON pin from Low-to-High. Likewise, power-down in reverse order.

If V_{DD} and V_D need to be powered up simultaneously, glitching can be minimized by having a suitable load capacitor. A 10 μ F C_{LOAD} will prevent glitches for rise times of V_{DD} and V_D less than 2 ms.

If the ON pin is toggled HIGH before V_{DD} and V_D have reached their steady-state values, the IPS timing parameters may differ from datasheet specifications.

The slew rate of output V_S follows a linear ramp set by a capacitor connected to the CAP pin. A larger capacitor value at the CAP pin produces a slower ramp, reducing inrush current from capacitive loads.

SLG59M1735C Voltage Limitation

V_D may not exceed V_{DD} for proper operation otherwise the Active Current Limit cannot function properly.

SLG59M1735C Current Limiting

The SLG59M1735C has two modes of current limiting, differentiated by the output (Source pin) voltage.

1. Standard Current Limiting Mode (with Thermal Protection)

When $V_S > 250$ mV, the output current is initially limited to the Active Current Limit specification given in the Electrical Characteristics table. The current limiting circuit is very fast and responds within a few micro-seconds to sudden loads. When overload is sensed, the current limiting circuit increases the FET resistance to keep the current from exceeding the Active Current Limit.

However, if an overload condition persists, the die temperature rise due to the increased FET resistance while at maximum current can activate Thermal Protection. If the die temperature exceeds the $THERM_{ON}$ specification, the FET is shut completely OFF, allowing the die to cool. When the die cools to the $THERM_{OFF}$ temperature, the FET is allowed to turn back on. This process may repeat as long as the overload condition is present.

2. Short Circuit Current Limiting Mode (with Thermal Protection)

When $V_S < 250$ mV (which is the case with a hard short, such as a solder bridge on the power rail), the current is limited to approximately 500 mA. Thermal Protection is also present, but since the Short Circuit Current Limit is much lower than Standard Current Limit, activation may only occur at higher ambient temperatures.

Recommended Reflow Soldering Profile

For successful reflow of the SLG59M1735C a recommended thermal profile is illustrated below:

Note: This reflow profile is for classification/preconditioning and are not meant to specify board assembly profile. Actual board assembly profiles should be developed based on specific process needs and board designs and should not exceed parameters depicted on figure above.

Please see more information on IPC/JEDEC J-STD-020: latest revision for reflow profile based on package volume of 0.352 mm³ (nominal).
