

XLamp® CHA0612 LED

PRODUCT DESCRIPTION

The XLamp® CHA LED family delivers an industry-leading combination of lumen density and efficacy in LES sizes as small as 3.3 mm. CHA family LEDs deliver 50% higher lumen density than the existing XLamp CMU family LEDs for significant improvements in beam angle and intensity. The XLamp CHA family LEDs are also compatible with the available ecosystem of holders and optics designed for high-intensity COBs.

XLamp CHA LEDs are optimized for premium indoor lighting applications, including track, spot and downlight, as well as outdoor lighting.

FEATURES

- 6-mm optical source
- Available in 80-, 90-, and 95-minimum CRI options
- EasyWhite® 2-, 3- and 5-step binning
- Premium Color 2- and 3-step binning
- Forward voltage option: 36-V class
- 85 °C binning and characterization
- Maximum drive current: 600 mA
- 114° viewing angle, uniform chromaticity profile
- Top-side solder connections

CHARACTERISTICS

Characteristics	Unit	Minimum	Typical	Maximum
Viewing angle (FWHM)	degrees		114	
ESD withstand voltage (JEDEC JS-001-2012)	V		Class 3A	
DC forward current	mA			600*
Reverse current	mA			0.1
Forward voltage (@ 350 mA, 85 °C)	V		36.0	39.0

* Refer to the Operating Limits section.

OPERATING LIMITS

The maximum current rating of the CHA0612 depends on the case temperature (T_c) when the LED has reached thermal equilibrium under steady-state operation. The graph shown below assumes that the system design employs good thermal management (thermal interface material and heat sink) and may vary when poor thermal management is employed. Either solder pad shown in the Mechanical Dimensions section on page 16 can be used as the T_c measurement point.

Another important factor in good thermal management is the temperature of the Light Emitting Surface (LES). Cree LED recommends a maximum LES temperature of 140 °C to ensure optimal LED lifetime. Please refer to the Thermal Design section on page 17 for more information on LES temperature measurement.

FLUX CHARACTERISTICS, ORDER CODES AND BINS - STANDARD LEDS ($I_F = 350 \text{ mA}$, $T_J = 85^\circ\text{C}$)

The following table provides order codes for XLamp CHA0612 LEDs. For a complete description of the order code nomenclature, please see the Bin and Order Code Formats section (page 15).

Nominal CCT	CRI		Minimum Luminous Flux (lm)	Typical Luminous Flux (lm)	2-Step		3-Step		5-Step	
	Min.	Typ			Group	Order Code	Group	Order Code	Group	Order Code
4000 K	80	82	1594	1678	40H	CHA0612-0000-000N0H0A40H	40G	CHA0612-0000-000N0H0A40G		
	90	92	1402	1476	40H	CHA0612-0000-000N0U0A40H	40G	CHA0612-0000-000N0U0A40G		
3500 K	80	82	1554	1636	35H	CHA0612-0000-000N0H0A35H	35G	CHA0612-0000-000N0H0A35G		
	90	92	1369	1441	35H	CHA0612-0000-000N0U0A35H	35G	CHA0612-0000-000N0U0A35G		
3000 K	80	82	1507	1587	30H	CHA0612-0000-000N0H0A30H	30G	CHA0612-0000-000N0H0A30G		
	90	92	1312	1381	30H	CHA0612-0000-000N0U0A30H	30G	CHA0612-0000-000N0U0A30G		
2700 K	80	82	1441	1516	27H	CHA0612-0000-000N0H0A27H	27G	CHA0612-0000-000N0H0A27G		
	90	92	1242	1307	27H	CHA0612-0000-000N0U0A27H	27G	CHA0612-0000-000N0U0A27G		

Notes

- Cree LED maintains a tolerance of $\pm 7\%$ on flux and power measurements, ± 0.005 on chromaticity (CC_x , CC_y) measurements and a tolerance of ± 2 on CRI measurements. See the Measurements section (page 18).
- For 80 CRI minimum LEDs, CRI R9 minimum is 0 with a ± 2 tolerance. For 90 CRI minimum LEDs, CRI R9 typical is 60.

FLUX CHARACTERISTICS, ORDER CODES & BINS - STANDARD LEDS, PREMIUM COLOR ($I_F = 350 \text{ mA}$, $T_J = 85^\circ \text{C}$)

Specialty

ELECTRICAL CHARACTERISTICS

The following graph is the result of a series of steady-state measurements.

RELATIVE LUMINOUS FLUX

The relative luminous flux values provided below are the ratio of:

- Measurements of CHA0612 at steady-state operation at the given conditions, divided by
- Flux measured during binning, which is a pulsed measurement at 350 mA at $T_j = 85^\circ\text{C}$.

For example, at steady-state operation of $T_c = 55^\circ\text{C}$, $I_F = 550\text{ mA}$, the relative luminous flux ratio is 150% in the chart below. A CHA0612 LED that measures 1400 lm during binning will deliver 2100 lm (1400×1.5) at steady-state operation of $T_c = 55^\circ\text{C}$, $I_F = 550\text{ mA}$.

TYPICAL SPATIAL DISTRIBUTION

EASYWHITE® PERFORMANCE GROUPS - CHROMATICITY ($T_j = 85\text{ }^{\circ}\text{C}$)

XLamp CHA0612 LEDs are tested for chromaticity and placed into one of the regions defined by the following bounding coordinates.

EasyWhite Color Temperatures – 2-Step			
Code	CCT	x	y
40H	4000 K	0.3777	0.3739
		0.3797	0.3816
		0.3861	0.3855
		0.3838	0.3777

U = 90 CRI min

Z = 95 CRI min

To assist in identifying the LED, CHA0612 LEDs provide a 2D barcode, positioned on the back of the LED, as shown in the following diagram. For a complete description of the bar code format, please refer to the [XLamp CHA Family LEDs soldering and handling document](#).

Tc measurement point: either the anode or cathode solder

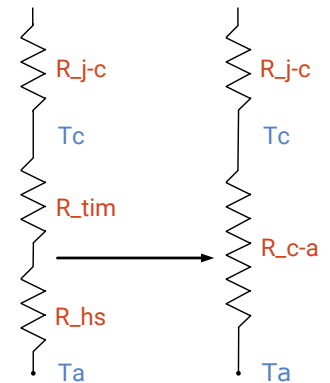

THERMAL DESIGN

The CHA family of LED arrays can include over a hundred different LED die inside one package, and thus over a hundred different junction temperatures (T_j). Cree LED has intentionally removed junction-temperature-based operating limits and replaced the commonplace maximum T_j calculations with maximum ratings based on forward current (I_f) and case temperature (T_c). No additional calculations are required to ensure the CHA LED is being operated within its designed limits. LES temperature measurement provides additional verification of good thermal design. Please refer to page 2 for the Operating Limits specification.

There is no need to calculate for T_j inside the package, as the thermal management design process, specifically from solder point (T_{sp}) to ambient (T_a), remains identical to any other LED component. For more information on thermal management of XLamp LEDs, please refer to the [Thermal Management application note](#). For CHA soldering recommendations and more information on thermal interface materials (TIM), LES temperature measurement, and connection methods, please refer to the [XLamp CHA Family LEDs soldering and handling document](#).

To keep the CHA0612 LED at or below the maximum rated T_c , the case to ambient temperature thermal resistance (R_{c-a}) must be at or below the maximum R_{c-a} value shown on the following graph, depending on the operating environment. The y-axis in the graph is a base 10 logarithmic scale.

As the figure at right shows, the R_{c-a} value is the sum of the thermal resistance of the TIM (R_{tim}) plus the thermal resistance of the heat sink (R_{hs}).

NOTES

Measurements

The luminous flux, radiant power, chromaticity, forward voltage and CRI measurements in this document are binning specifications only and solely represent product measurements as of the date of shipment. These measurements will change over time based on a number of factors that are not within Cree LED's control and are not intended or provided as operational specifications for the products. Calculated values are provided for informational purposes only and are not intended or provided as specifications.

Pre-Release Qualification Testing

Please read the [LED Reliability Overview](#) for details of the qualification process Cree LED applies to ensure long-term reliability for XLamp LEDs and details of Cree LED's pre-release qualification testing for XLamp LEDs. Cree LED did not perform Room Temperature Operating Life (RTOL) testing on the CHA0612 LED.

Lumen Maintenance

Cree LED now uses standardized IES LM-80-08 and TM-21-11 methods for collecting long-term data and extrapolating LED lumen maintenance. For information on the specific LM-80 data sets available for this LED, refer to the public [LM-80 results document](#).

Please read the [Long-Term Lumen Maintenance application note](#) for more details on Cree LED's lumen maintenance testing and forecasting. Please read the [Thermal Management application note](#) for details on how thermal design, ambient temperature, and drive current affect the LED junction temperature.

Vision Advisory

WARNING: Do not look at an exposed lamp in operation. Eye injury can result. For more information about LEDs and eye safety, please refer to the [LED Eye Safety application note](#).

PACKAGING

CHA0612 LEDs are packaged in trays of 80. Five trays are sealed in an anti-static bag and placed inside an inner box, for a total of 400 LEDs per box. Each box contains LEDs from the same performance bin. Eight boxes are placed inside a carton, for a total of 3,200 LEDs per carton.

Dimensions are in mm.

Tolerances: ± 0.5 mm
