XLamp® XHP35.2 LEDs

PRODUCT DESCRIPTION

The XLamp® XHP35.2 LED is the next generation of Extreme High Power LEDs available in the XP footprint. Built on Cree LED’s latest high-power LED array technology, the XHP35.2 LED improves the voltage characteristics, efficacy and reliability of the XHP35 LED in the same 3.45 mm x 3.45 mm footprint. The new XHP35.2 LED provides an easy drop-in upgrade so that lighting manufacturers can achieve higher system LPW on existing XHP35 designs with minimal system redesign cost.

The XHP35.2 LED offers a high-intensity option. In this document, the term XHP35.2 denotes the XHP35.2 LED without regard to high density or high intensity. The terms High Density and High Intensity are used when necessary to differentiate the performance of the two options.

FEATURES

- Available in 5-step EasyWhite® bins at 2700 K—5700 K CCT and 3-step & 2-step EasyWhite bins at 2700 K—4000 K CCT
- Available in ANSI white bins at 2700 K to 7000 K CCT
- Available in standard, 70, 80, 90, and 95 CRI minimum options
- Binned at 85 °C
- Maximum drive current: 1500 mA
- Low thermal resistance: 0.7 °C/W
- Wide viewing angle - High Density:135°, High Intensity: 120°
- Unlimited floor life at ≤ 30 °C/85% RH
- Reflow solderable - JEDEC J-STD-020C
- RoHS and REACH compliant
- UL® recognized component (E349212)

</table>

Notes:
• Cree LED maintains a tolerance of ±7% on flux and power measurements, ±0.005 on chromaticity (CCx, CCy) measurements and ±2 on CRI measurements. See the Measurements section (page 30).
• XLamp XHP35.2 LED order codes specify only a minimum flux bin and not a maximum. Cree LED may ship reels in flux bins higher than the minimum specified by the order code without advance notice. Shipments will always adhere to the chromaticity bin restrictions specified by the order code.

### Notes:
- Cree LED maintains a tolerance of ±7% on flux and power measurements, ±0.005 on chromaticity (CCx, CCy) measurements and ±2 on CRI measurements. See the Measurements section (page 30).
- XLamp XHP35.2 LED order codes specify only a minimum flux bin and not a maximum. Cree LED may ship reels in flux bins higher than the minimum specified by the order code without advance notice. Shipments will always adhere to the chromaticity bin restrictions specified by the order code.

**RELATIVE CHROMATICITY VS. TEMPERATURE (WARM WHITE)**

![Graph showing relative chromaticity vs. temperature (warm white)](image)
TYPICAL SPATIAL DISTRIBUTION

The maximum forward current is determined by the thermal resistance between the LED junction and ambient. It is crucial for the end product to be designed in a manner that minimizes the thermal resistance from the solder point to ambient in order to optimize lamp life and optical characteristics.

THERMAL DESIGN

![Thermal Design Graph]

- $R_{j-a} = 3^\circ C/W$
- $R_{j-a} = 4^\circ C/W$
- $R_{j-a} = 6^\circ C/W$
- $R_{j-a} = 8^\circ C/W$
PERFORMANCE GROUPS - LUMINOUS FLUX (T<sub>J</sub> = 85 °C)

XLamp XHP35.2 LEDs are tested for luminous flux and placed into one of the following luminous-flux groups.

<table>
<thead>
<tr>

STANDARD COOL WHITE KITS PLOTTED ON ANSI STANDARD CHROMATICITY REGIONS

- DT
- DV
- E1
- E2

CCx vs CCy plots for different kits, showing chromaticity coordinates for standard cool white kits on ANSI standard chromaticity regions.
STANDARD WARM AND NEUTRAL WHITE KITS PLOTTED ON ANSI STANDARD CHROMATICITY REGIONS
Bin and Order Code Formats

Bin codes and order codes for XHP35.2 LEDs are configured in the following manner:

Order Code

- Series: XHP35B = XHP35.2
- Internal code
- Minimum luminous flux group
- Chromaticity group
- CRI specification
  - 0 = No minimum CRI
  - B = 70 CRI minimum
  - H = 80 CRI minimum
  - U = 90 CRI minimum
  - Z = 95 CRI minimum
- Vf class
- Configuration
  - B: Version
    - 0 = High density
    - H = High intensity
  - D: Reel size

Bin Code

- Series: XHP35B = XHP35.2
- Chromaticity group
- Luminous flux group
- Voltage performance group
- CRI specification
  - 0 = No minimum CRI
  - B = 70 CRI minimum
  - H = 80 CRI minimum
  - U = 90 CRI minimum
  - Z = 95 CRI minimum
- Internal code
- Vf class
- Version
  - 0 = High density
  - H = High intensity
REFLOW SOLDERING CHARACTERISTICS

In testing, Cree LED has found XLamp XHP35.2 LEDs to be compatible with JEDEC J-STD-020C, using the parameters listed below. As a general guideline, Cree LED recommends that users follow the recommended soldering profile provided by the manufacturer of the solder paste used, and therefore it is the lamp or luminaire manufacturer’s responsibility to determine applicable soldering requirements.

Note that this general guideline may not apply to all PCB designs and configurations of reflow soldering equipment.

NOTES

Measurements
The luminous flux, radiant power, chromaticity, forward voltage and CRI measurements in this document are binning specifications only and solely represent product measurements as of the date of shipment. These measurements will change over time based on a number of factors that are not within Cree LED’s control and are not intended or provided as operational specifications for the products. Calculated values are provided for informational purposes only and are not intended or provided as specifications.

Pre-Release Qualification Testing
Please read the LED Reliability Overview for details of the qualification process Cree LED applies to ensure long-term reliability for XLamp LEDs and details of Cree LED’s pre-release qualification testing for XLamp LEDs.

Lumen Maintenance
Cree LED now uses standardized IES LM-80-08 and TM-21-11 methods for collecting long-term data and extrapolating LED lumen maintenance. For information on the specific LM-80 data sets available for this LED, refer to the public LM-80 results document.

Please read the Long-Term Lumen Maintenance application note for more details on Cree LED’s lumen maintenance testing and forecasting. Please read the Thermal Management application note for details on how thermal design, ambient temperature, and drive current affect the LED junction temperature.

Moisture Sensitivity
Cree LED recommends keeping XLamp LEDs in the provided, resealable moisture-barrier packaging (MBP) until immediately prior to soldering. Unopened MBPs that contain XLamp LEDs do not need special storage for moisture sensitivity.

Once the MBP is opened, XLamp XHP35.2 LEDs may be stored as MSL 1 per JEDEC J-STD-033, meaning they have unlimited floor life in conditions of ≤ 30 °C/85% relative humidity (RH). Regardless of the storage condition, Cree LED recommends sealing any unsoldered LEDs in the original MBP.

RoHS Compliance
The levels of RoHS restricted materials in this product are below the maximum concentration values (also referred to as the threshold limits) permitted for such substances, or are used in an exempted application, in accordance with EU Directive 2011/65/EC (RoHS2), as implemented January 2, 2013. RoHS Declarations for this product can be obtained from your Cree LED representative or from the Product Ecology section of the Cree LED website.

REACH Compliance
REACH substances of very high concern (SVHCs) information is available for this product. Since the European Chemical Agency (ECHA) has published notice of their intent to frequently revise the SVHC listing for the foreseeable future, please contact a Cree LED representative to insure you get the most up-to-date REACH SVHC Declaration. REACH banned substance information (REACH Article 67) is also available upon request.
NOTES - CONTINUED

UL® Recognized Component
This product meets the requirements to be considered a UL Recognized Component with Level 4 enclosure consideration. The LED package or a portion thereof has been investigated as a fire and electrical enclosure per ANSI/UL 8750.

Vision Advisory
WARNING: Do not look at an exposed lamp in operation. Eye injury can result. For more information about LEDs and eye safety, please refer to the LED Eye Safety application note.
MECHANICAL DIMENSIONS

Thermal vias, if present, are not shown on these drawings.

All dimensions are ±.13 mm unless otherwise indicated.

XHP35.2 High Density

XHP35.2 High Intensity
Notes:
- Cree LED recommends using thermal pad kickouts to maximize component thermal performance.
- Cree LED recommends using white solder mask material to minimize system optical loss.
* This stencil has been tested and optimized for the avoidance of voiding when using ALPHA® LUMET® P30 Maxrel solder paste. For other solder pastes, a "window pane" design for the thermal pad stencil may result in a lower voiding percentage. Contact your local Cree LED Field Applications Engineer for consultation regarding your specific application.
TAPE AND REEL

All Cree LED carrier tapes conform to EIA-481D, Automated Component Handling Systems Standard.

Except as noted, all dimensions in mm [inches]
