J Series® JE2835 Color LEDs

PRODUCT DESCRIPTION

J Series® LEDs extend Cree LED's industry leading portfolio of lighting class LEDs to a broader set of applications. With 14 available colors, the JE2835 N Class color LED family offers top performance and the broadest range of options available in a mid-power LED. JE2835 N Class color LEDs use a standard 2835 package, with most colors having the same polarity as Cree LED's numerous 2835 white LED options.

JE2835 N Class color LEDs are optimized for low-density and linear lighting applications, including architectural, horticulture and transportation.

FEATURES

- Industry-compatible size : 2.8 x 3.5 x 0.7 mm
- 3-V configuration
- Available in royal blue, blue, cyan, green, PC lime, PC mint, amber, PC amber, red-orange, PC red-orange, red, photo red, far red, and PC purple
- UL® recognized component (E495478)
- RoHS and REACh compliant

J Series® Products are sold exclusively by Cree Venture LED Company Limited ("Cree Venture"), regardless of geography. Any orders for J Series Products that are submitted to Cree LED or any of its other subsidiaries will be directed to Cree Venture for acknowledgment and order fulfillment.

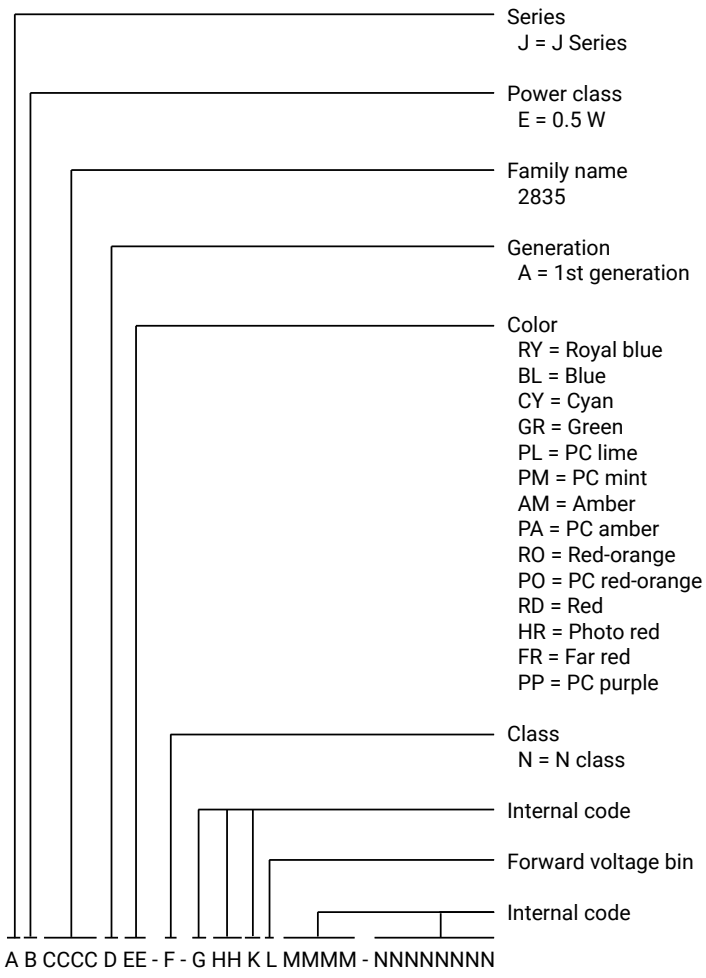
TABLE OF CONTENTS

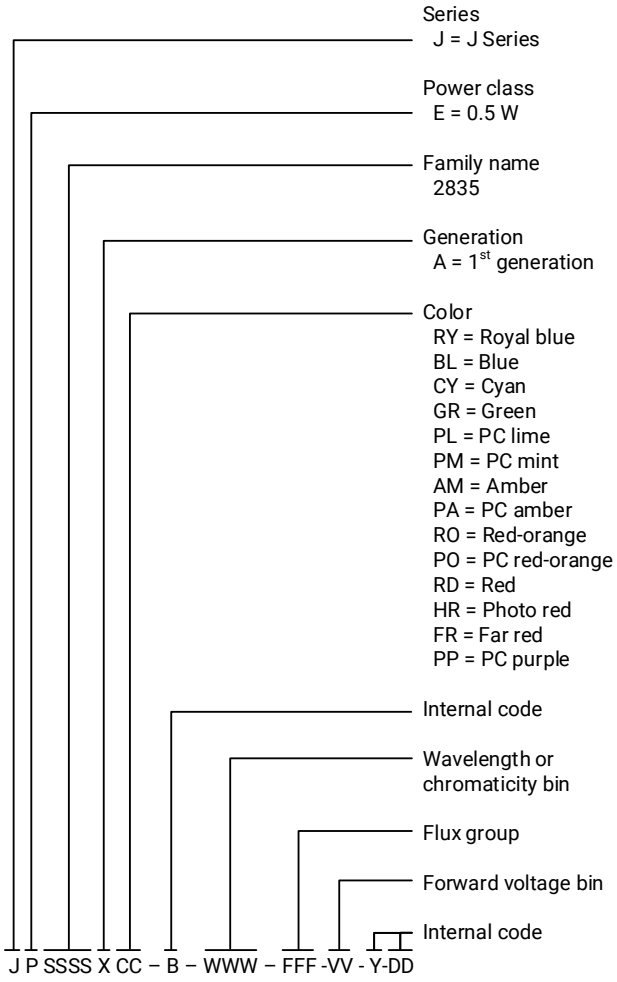
ORDER CODE & BIN CODE FORMATS

Order codes and bin codes for J Series JE2835 color LEDs are configured in the following manner:

Order Code



Bin Code



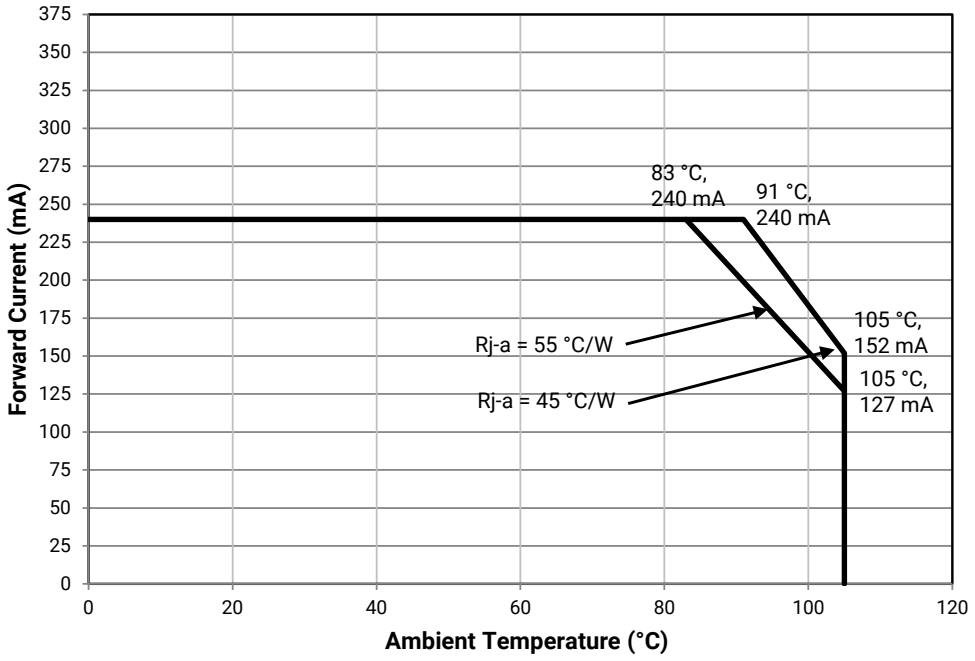
JE2835 ROYAL BLUE

CHARACTERISTICS - JE2835 ROYAL BLUE

Characteristics	Unit	Minimum	Typical	Maximum
Thermal resistance, junction to solder point	°C/W		10	
Viewing angle (FWHM)	degrees		124	
Temperature coefficient of voltage	mV/°C		-1.6	
ESD withstand voltage (JEDEC JS-001-2012)			Class 2	
DC forward current	mA			240
Reverse voltage	V			5
Forward voltage (@ 140 mA, 25 °C)	V		2.96	3.1
LED junction temperature	°C			125
Operating temperature	°C	-40		105

OPERATING LIMITS - JE2835 ROYAL BLUE

The maximum forward current is determined by the thermal resistance between the LED junction and ambient.



FLUX CHARACTERISTICS, ORDER CODES AND BINS - JE2835 ROYAL BLUE (I_F = 140 mA, T_j = 25 °C)

The following table provides order codes for J Series JE2835 royal blue LEDs. For a complete description of the order code nomenclature, please see the Order Code and Bin Code Formats section (page 4). For definitions of the chromaticity kits, please see the Chromaticity Color Coordinates section (page 9).

Minimum Flux		Typical Radiant Flux (mW)	Dominant Wavelength				Order Code
			Minimum		Maximum		
Group	Flux (mW)		Group	WL (nm)	Group	WL (nm)	
43	260	272	D3	450	D4	460	JE2835ARY-N-0002A0000-N0000001

PERFORMANCE GROUPS - RADIANT FLUX - JE2835 ROYAL BLUE (T_j = 25 °C)

J Series JE2835 royal blue LEDs are tested for radiant flux at 140 mA and placed into one of the following radiant-flux groups.

Color	Code	Minimum Radiant Flux (mW)	Maximum Radiant Flux (mW)
Royal Blue	43	260	270
	44	270	280
	45	280	290

PERFORMANCE GROUPS - DOMINANT WAVELENGTH - JE2835 ROYAL BLUE

J Series JE2835 royal blue LEDs are tested for dominant wavelength (DWL) and sorted into one of the DWL bins defined below.

Color	DWL Group	Minimum DWL (nm) @ 140 mA	Maximum DWL (nm) @ 140 mA
Royal Blue	D3	450	455
	D4	455	460

Notes:

- Cree Venture maintains a tolerance of ±7% on flux and power measurements, ±0.005 on chromaticity (CCx, CCy) measurements and ±1 nm on wavelength measurements. See the Measurements section (page 79).
- Cree Venture J Series 2835 LED order codes specify only a minimum flux bin and not a maximum. Cree Venture may ship reels in flux bins higher than the minimum specified by the order code without advance notice. Shipments will always adhere to the chromaticity restrictions specified by the order code.

PERFORMANCE GROUPS - LUMINOUS FLUX - JE2835 RED-ORANGE (T_J = 25 °C)

J Series JE2835 red-orange LEDs are tested for luminous flux at 140 mA and placed into one of the following luminous-flux groups.

Color	Code	Minimum Luminous Flux (lm)	Maximum Luminous Flux (lm)
Red-Orange	C4	26.0	28.0
	C5	28.0	30.0
	D2	30.0	32.0
	D3	32.0	34.0

PERFORMANCE GROUPS - DOMINANT WAVELENGTH - JE2835 RED-ORANGE

J Series JE2835 red-orange LEDs are tested for dominant wavelength and sorted into one of the DWL bins defined below.

Color	DWL Group	Minimum DWL (nm) @ 140 mA	Maximum DWL (nm) @ 140 mA
Red-Orange	O3	610	615
	O4	615	620

Notes:

- Cree Venture maintains a tolerance of ±7% on flux and power measurements, ±0.005 on chromaticity (CCx, CCy) measurements and ±1 nm on wavelength measurements. See the Measurements section (page 79).
- Cree Venture J Series 2835 LED order codes specify only a minimum flux bin and not a maximum. Cree Venture may ship reels in flux bins higher than the minimum specified by the order code without advance notice. Shipments will always adhere to the chromaticity restrictions specified by the order code.

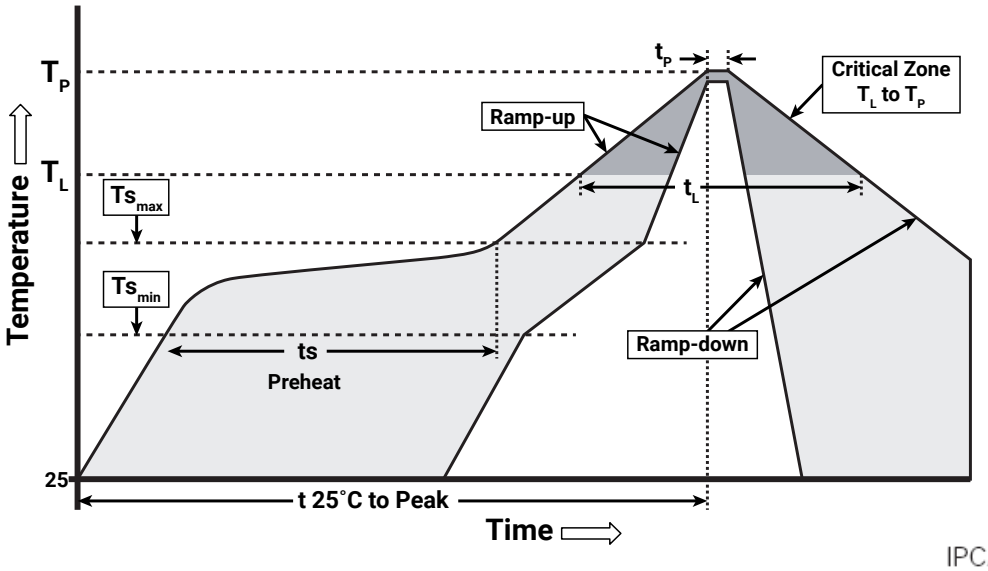
REFLOW SOLDERING CHARACTERISTICS

In testing, Cree Venture has found J Series 2835 color LEDs to be compatible with JEDEC J-STD-020C, using the parameters listed below. As a general guideline, Cree Venture recommends that users follow the recommended soldering profile provided by the manufacturer of the solder paste used, and therefore it is the lamp or luminaire manufacturer's responsibility to determine applicable soldering requirements.

Note that this general guideline may not apply to all PCB designs and configurations of reflow soldering equipment.



IPC/JEDEC J-STD-020C

Profile Feature	Lead-Free Solder
Temperature Min. (Ts_{min})	150 °C
Temperature Max. (Ts_{max})	200 °C
Time (ts) from Ts_{min} to Ts_{max}	60-120 seconds
Ramp-Up Rate (T_L to T_p)	3 °C/second
Liquidus Temperature (T_L)	217 °C
Time (t_L) Maintained Above T_L	60-150 seconds
Peak Package Body Temperature (Tp)	260 °C max.
Time (tp) Within 5 °C of the Specified Classification Temperature (Tc)	30 seconds max.
Ramp-Down Rate (T_p to T_L)	6 °C/second max.
Time 25 °C to Peak Temperature	8 minutes max.

Note: All temperatures refer to the topside of the package, measured on the package body surface.

NOTES

Measurements

The luminous flux, radiant power, chromaticity, forward voltage and CRI measurements in this document are binning specifications only and solely represent product measurements as of the date of shipment. These measurements will change over time based on a number of factors that are not within Cree Venture's control and are not intended or provided as operational specifications for the products. Calculated values are provided for informational purposes only and are not intended or provided as specifications.

Pre-Release Qualification Testing

Please read the J Series Reliability Overview for the details of the pre-release qualification testing for J Series LEDs.

Lumen Maintenance

Cree Venture uses standardized IES LM-80-08 and TM-21-11 methods for collecting long-term data and extrapolating LED lumen maintenance. For information on the specific LM-80 data sets available for this LED, refer to the public J Series LM-80 results document.

Please read the Thermal Management application note for details on how thermal design, ambient temperature, and drive current affect the LED junction temperature.

Moisture Sensitivity

Cree Venture recommends keeping J Series 2835 color LEDs in the provided, resealable moisture-barrier packaging (MBP) until immediately prior to soldering. Unopened MBP that contains J Series 2835 color LEDs do not need special storage for moisture sensitivity.

Once the MBP is opened, J Series 2835 color LEDs should be handled and stored as MSL 3 per JEDEC J-STD-033, meaning they have limited exposure time before damage to the LED may occur during the soldering operation. The table on the right specifies the maximum exposure time in days depending on temperature and humidity conditions. LEDs with exposure time longer than the specified maximums must be baked according to the baking conditions listed below.

Moisture Sensitivity Level	Temp.	Maximum Percent Relative Humidity				
		50%	60%	70%	80%	90%
Level 3	35 °C	8	5	1	0.5	0.5
Level 3	30 °C	11	7	1	1	1
Level 3	25 °C	14	10	2	1	1
Level 3	20 °C	20	13	2	1	1

Baking Conditions

It is not necessary to bake all J Series 2835 color LEDs. Only the LEDs that meet all of the following criteria must be baked:

1. LEDs that have been removed from the original MBP.
2. LEDs that have been exposed to a humid environment longer than listed in the Moisture Sensitivity section above.
3. LEDs that have not been soldered.

LEDs should be baked at 60 °C for 24 hours. LEDs may be baked in the original reels. Remove LEDs from the MBP before baking. Do not bake parts at temperatures higher than 60 °C. This baking operation resets the exposure time as defined in the Moisture Sensitivity section above.

NOTES - CONTINUED

UL® Recognized Component

This product meets the requirements to be considered a UL Recognized Component with Level 4 enclosure consideration. The LED package or a portion thereof has been investigated as a fire and electrical enclosure per ANSI/UL 8750.

Vision Advisory

WARNING: Do not look at an exposed lamp in operation. Eye injury can result. For more information about LEDs and eye safety, please refer to the J Series LED Eye Safety application note.

RoHS Compliance

The levels of RoHS restricted materials in this product are below the maximum concentration values (also referred to as the threshold limits) permitted for such substances, or are used in an exempted application, in accordance with EU Directive 2011/65/EC (RoHS2), as implemented January 2, 2013. RoHS Declarations for this product can be obtained from your Cree representative or from the Product Ecology section of the Cree website.

REACh Compliance

REACh substances of very high concern (SVHCs) information is available for this product. Since the European Chemical Agency (ECHA) has published notice of their intent to frequently revise the SVHC listing for the foreseeable future, please contact a Cree representative to insure you get the most up-to-date REACh SVHC Declaration. REACh banned substance information (REACh Article 67) is also available upon request.
