

# **Cree® CLN6A-WKW/MKW**

The CLN6A LED delivers superior value with common voltage, current, size and optical properties. The Cree CLN6A is available in both cool and warm white to address a variety of lighting applications, including linear, portable, landscape and entertainment.

## **FEATURES**

- Size (mm):5.0 x 5.0 x 1.3
- Color Temperatures(K): Cool White : Min . (4600) / Typical (5500) Warm White : Min . (2500) / Typical (3200)
- Luminous Flux (lm) CLN6A-WKW:(60.5 - 101.8) CLN6A-MKW:(51.0 - 101.8)
- CRI
  - Typical CRI for Cool White is 72 Typical CRI for Warm White is 80
- Lead-Free
- RoHS Compliant

## **APPLICATIONS**

- Linear Lighting
- Channel Letter
- Portable Lighting
- Architectural & Landscaping Lighting
- Entertainment Lighting

Notes:

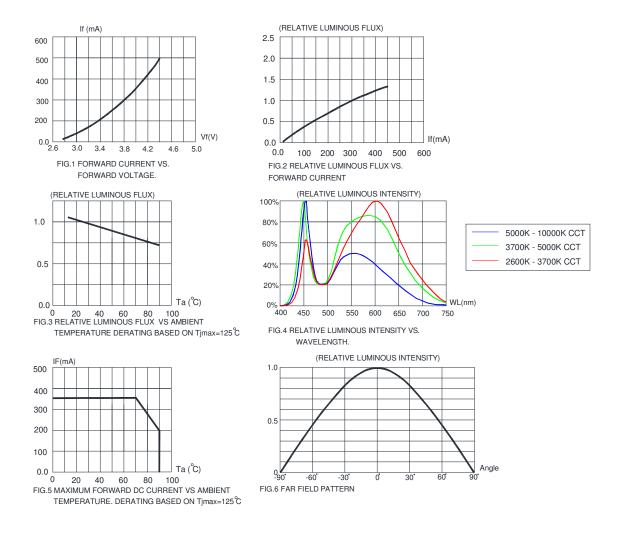

1. The above Kit numbers represent the order codes which include multiple flux-bin and color bin codes.Only one fluxbin code and one color bin code will be shipped on each reel. Single flux-bin codes and single color bin code will not be orderable.

2. Please refer to the "Cree LED Lamp Reliability Test Standards" document for reliability test conditions.

3. Please refer to the "Cree LED Lamp Soldering & Handling" document for information about how to use this LED product safely.

#### GRAPHS

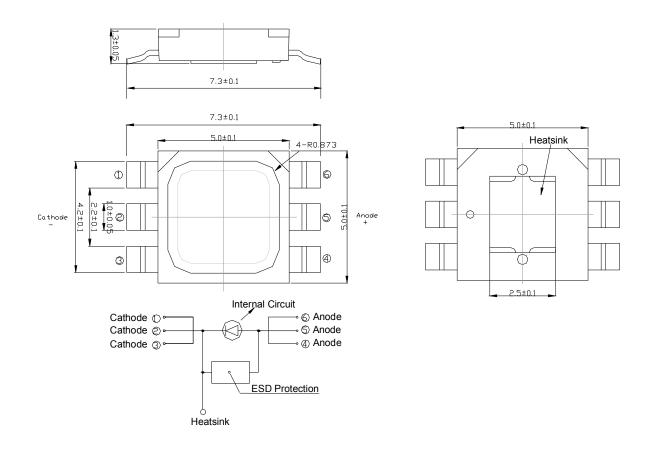

The above data are collected from statistical figures that do not necessarily correspond to the actual parameters of each single LED. Hence, these data will be changed without further notice.

# **MECHANICAL DIMENSIONS**

All dimensions are in mm.

#### NOTES

#### **RoHS** Compliance

The levels of environmentally sensitive, persistent biologically toxic (PBT), persistent organic pollutants (POP), or otherwise restricted materials in this product are below the maximum concentration values (also referred to as the threshold limits) permitted for such substances, or are used in an exempted application, in accordance with EU Directive 2002/95/ EC on the restriction of the use of certain hazardous substances in electrical and electronic equipment (RoHS), as amended through April 21, 2006.

#### Vision Advisory Claim

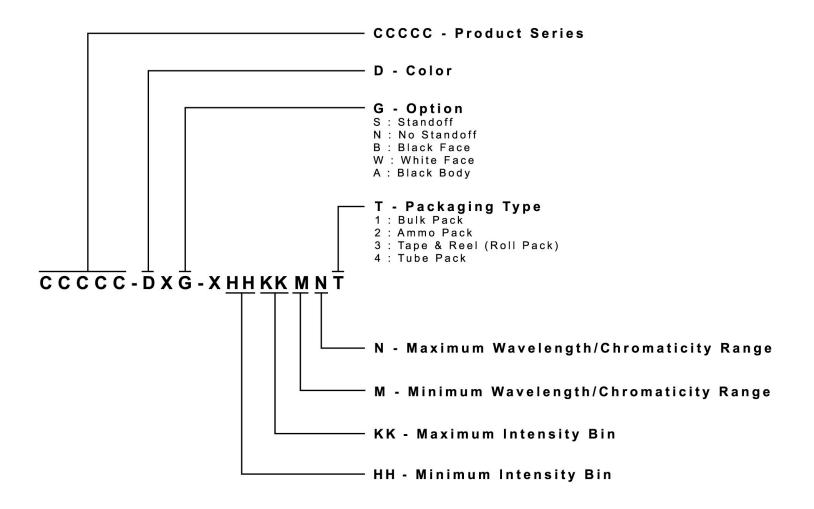

Users should be cautioned not to stare at the light of this LED product. The bright light can damage the eye.

## **KIT NUMBER SYSTEM**

Cree LED lamps are tested and sorted into performance bins. A bin is specified by ranges of color, forward voltage, and brightness. Sorted LEDs are packaged for shipping in various convenient options. Please refer to the "Cree LED Lamp Packaging Standard" document for more information about shipping and packaging options.

Cree LEDs are sold by order codes in combinations of bins called kits. Order codes are configured in the following manner:

# **SOLDERING & HANDLING**

- 1. Cleaning
- Don't use unspecified chemical liquids to clean the SMD LED; the chemical could harm the SMD LED. When washing is necessary, please immerse the SMD LED in alcohol at normal room temperature for less than 1 minute and dry at normal room temperature for 15 minutes before use.
- The influence of ultrasonic cleaning on the SMD LED depending on factors such as ultrasonic power and the way SMD LED are mounted. Ultrasonic cleaning shall be pre-qualified to ensure this will not cause damage to the SMD LED.
- 2. Moisture Proof Packing
- In order to prevent moisture absorption into SMD LED during the transportation and storage, SMD LED is packed in a moisture barrier bag. Desiccants and a humidity indicator are packed together with SMD LED as the secondary protection. The indication of humidity indicator card provides the information of humidity within SMD packing.
  Storage
- Shelf life in original sealed bag at storage condition of <40°C and <90%RH is 12 months. Baking is required whenever shelf life is expired.
- Before openning the packaging , Please check whether bag leak air or not.
- After bag opening, the SMD LED must be stored under the condition < 30°C and < 60%RH. Under this condition, SMD LED must be used (subject to reflow) within 168 hours after bag opening, and re-baking is required when exceeding 168 hours.
- For baking, place SMD LED in oven at temperature 80°C±5°C and relative humidity <=10%RH, for 24 hours.
- Take out the material from packaging bag for re-bake. Do not open the door of oven frequently during the baking process.
- 4. Soldering
- Manual soldering by soldering iron
- The use of a soldering iron of less than 25W is recommended and the temperature of the iron must be kept at below 315°C, with soldering time within 2 seconds.
- The epoxy resin of SMD LED should not be in contact with tip of soldering iron.
- No mechanical stress should be exerted on the resin portion of SMD LED during soldering.
- Handling of SMD LED should be done when the package has been cooled down to below 40°C or less. This is to prevent the SMD LED failures due to thermal-mechanical stress during handling.
- Reflow Soldering
- The temperature (Top surface of SMD LED) profile is as below:

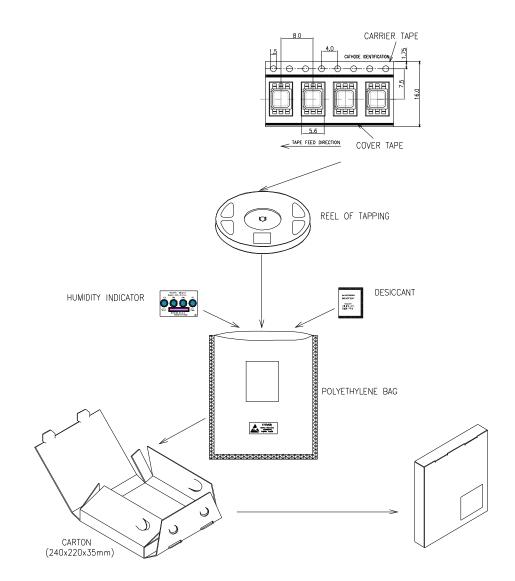

| Solder                                    |   |
|---|---|
| Average ramp-up rate = $4^{\circ}C/s$ max | Peak temperature = 250°C max.                         |
| Preheat temperature = 150°C ~200°C        | Time within 5°C of actual Peak Temperature = 10s max. |
| Preheat time = 100s max.                  | Duration above 217°C is 80s max.                      |
| Ramp-down rate = $6^{\circ}C/s$ max.      |   |

# PACKAGING

- The boxes are not water resistant and they must be kept away from water and moisture.
- The LEDs are packed in cardboard boxes after packaging in normal or anti-electrostatic bags.
- Cardboard boxes will be used to protect the LEDs from mechanical shocks during transportation.
- The reel pack is applied in SMD LED.
- Max 1100 pcs per reel.
