

● Features:

1. Emitted Color: Red, Blue and Green.
2. Lens Appearance: Water Clear.
3. 3.5x2.8x1.3 mm standard package.
4. Applied Voltage : 5V
5. Suitable for all SMT assembly methods.
6. Compatible with infrared and vapor phase reflow solder process.
7. Compatible with automatic placement equipment.
8. This product doesn't contain restriction Substance, comply ROHS standard.
9. Synchronous of two-lane.
10. 8Bit(256 level)Color set.
11. 5Bit(32 level)brightness adjustment.
12. 18mA Content current output.
13. High contrast.
14. Choose positive output or negative output RGB tri-color LED output.
15. With self-detection signal
Built-in support for continuous oscillation
PWM output can be maintained static screen.
16. AEC-Q102 Qualified

● Package Dimensions:

NOTES:

1. All dimensions are in millimeters (inches).
2. Tolerance is $\pm 0.10\text{mm}$ (0.004") unless otherwise specified.
3. Specifications are subject to change without notice.

● Applications:

1. Interior Lighting.
2. Ambient Lighting.
3. Automotive.

● Judgment criteria of failure for the reliability

Measuring items	Symbol	Measuring conditions	Judgment criteria for failure
Luminous intensity	Iv (mcd)	VCC=5V Iout =20mA	Below S ¹ X0.7

Note: 1. U means the upper limit of specified characteristics. S means initial value.

2. After each test, remove test pieces, wait for 2 hours and test pieces have returned to ambient temperature, then take next measurement.

● IR-Reflow

- 1、Avoid any external stress applied to the resin while the LEDs are at high temperature, especially during soldering.
- 2、Avoid rapid cooling or any excess vibration during temperature ramp-down process
- 3、Although the soldering condition is recommended above,
soldering at the lowest possible temperature is feasible for the LEDs

- IRON Soldering
350°C Within 3 sec, one time only.

● Handling Precautions

Compare to epoxy encapsulant that is hard and brittle, silicone is softer and flexible. Although its characteristic significantly reduces thermal stress, it is more susceptible to damage by external mechanical force.

As a result, special handling precautions need to be observed during assembly using silicone encapsulated LED products. Failure to comply might lead to damage and premature failure of the LED.

1. Handle the component along the side surfaces by using forceps or appropriate tools. (pic.1)
2. Do not directly touch or handle the silicone lens surface. It may damage the internal circuitry. (pic.2, pic.3)
3. Do not stack together assembled PCBs, containing exposed LEDs. Impact may scratch the silicone lens or damage the internal circuitry. (pic.4)
4. The outer diameter of the SMD pickup nozzle should not exceed the size of the LED to prevent air leaks. The inner diameter of the nozzle should be as large as possible. (pic.5)
5. A pliable material is suggested for the nozzle tip to avoid scratching or damaging the LED surface during pickup. (pic.5)
6. The dimensions of the component must be accurately programmed in the pick-and-place machine to insure precise pickup and avoid damage during production. (pic.5)

● Notes for designing:

Care must be taken to provide the current limiting resistor in the circuit so as to drive the LEDs within the rated figures. Also, caution should be taken not to overload LEDs with instantaneous voltage at the turning ON and OFF of the circuit.

When using the pulse drive care must be taken to keep the average current within the rated figures. Also, the circuit should be designed so as to be subjected to reverse voltage when turning off the LEDs.

● Storage:

In order to avoid the absorption of moisture, it is recommended to solder LEDs as soon as possible after unpacking the sealed envelope.

If the envelope is still packed, to store it in the environment as following:

- (1) Temperature : 5°C - 30°C (41°F) Humidity : RH 60% Max.
- (2) After this bag is opened, devices that will be applied to infrared reflow, vapor-phase reflow, or equivalent soldering process must be:
 - a. Completed within 24 hours.
 - b. Stored at less than 20% RH.
- (3) Devices require baking before mounting, if:
2a or 2b is not met.
- (4) If baking is required, devices must be baked under below conditions:
48 hours at $60^{\circ}\text{C} \pm 5^{\circ}\text{C}$.
