

OUTLINE

The R1500x is a positive voltage regulator (VR) IC developed with CMOS process technology. The R1500xxxxB has features of high input voltage operating, 500 mA output current drive, and low supply current.

A DMOS transistor is used for the driver, high voltage operating and low on resistance ($0.6\ \Omega$ at $V_{\text{SET}} = 10\ \text{V}$) device is realized. A standard regulator circuit with a current limit circuit and a thermal shutdown circuit are built in the R1500x.

As the operating temperature range is from -40°C to 105°C and maximum input voltage is up to 24 V, the R1500x is suitable for the constant voltage source for car accessories.

The regulator output voltage is fixed in the R1500x. Output voltage accuracy is $\pm 2.0\%$ and output voltage range is from 3.0 V to 12.0 V with a step of 0.1 V. The chip enable pin realizes ultra low supply current standby mode.

The R1500x is offered in a 5-pin SOT-89-5 package which can achieve the smallest possible footprint solution on boards where area is limited.

* The DMOS (Double Diffused MOS) transistor adopted by R1500x is characterized by a double diffusion structure which comprises a low density n-type (channel) diffused layer and a high density p-type (sources) diffused layer from the edge of the gate electrode. The R1500x possesses outstanding properties of high operating voltage and low on-resistance, which have been achieved by the channel length scaled down to submicron dimensions and decreased thickness of the gate oxide film.

FEATURES

- Input Voltage Range (Maximum Rating)..... 4.0 V to 24.0 V (36 V)
- Operating Temperature range..... -40°C to 105°C
- Supply Current..... Typ. 70 μA
- Standby Current..... Typ. 0.1 μA
- Ripple Rejection Typ. 60 dB ($V_{\text{SET}} = 5.0\ \text{V}$)
- Temperature-Drift Coefficient of Output Voltage..... Typ. $\pm 100\ \text{ppm}/^{\circ}\text{C}$
- Output Current..... Min. 500 mA ($V_{\text{IN}} = V_{\text{SET}} + 1\ \text{V}$)
- Line Regulation..... Typ. 0.05%/V
- Output Voltage Accuracy $\pm 2\%$
- Output Voltage 3.0 V to 12.0 V (0.1 V step)
- Package SOT-89-5
- Built-in Current Limit Circuit..... Typ. 65 mA
- Built-in Fold-Back Circuit
- Built-in Thermal Shutdown Circuit

APPLICATIONS

- Power source for accessories such as car audios, car navigation systems, and ETC systems
- Power source for ECUs such as EV inverter and battery charge control unit

ABSOLUTE MAXIMUM RATINGS

Electronic and mechanical stress momentarily exceeded absolute maximum ratings may cause the permanent damages and may degrade the life time and safety for both device and system using the device in the field.
The functional operation at or over these absolute maximum ratings is not assured.

RECOMMENDED OPERATING CONDITIONS

Symbol	Item	Rating	Unit
V_{IN}	Input Voltage	4.0 to 24.0	V
T_a	Operating Temperature Range	-40 to 105	$^{\circ}\text{C}$

RECOMMENDED OPERATING CONDITIONS

All of electronic equipment should be designed that the mounted semiconductor devices operate within the recommended operating conditions. The semiconductor devices cannot operate normally over the recommended operating conditions, even if when they are used over such conditions by momentary electronic noise or surge. And the semiconductor devices may receive serious damage when they continue to operate over the recommended operating conditions.

TYPICAL APPLICATION

External Components

Symbol	Description
C2 (C _{OUT})	10 μ F, Ceramic Capacitor Murata GRM32DB31E106K (size: 3225)

TECHNICAL NOTES

When using these ICs, consider the following points:

Phase Compensation

In these ICs, phase compensation is made for securing stable operation even if the load current is varied. For this purpose, use a capacitor C2 with good frequency characteristics and ESR (Equivalent Series Resistance).

If you use a tantalum type capacitor and ESR value of the capacitor is large, output might be unstable. Evaluate your circuit with considering frequency characteristics.

Depending on the capacitor size, manufacturer, and part number, the bias characteristics and temperature characteristics are different. Evaluate the circuit with actual using capacitors.

PCB Layout

Make V_{DD} and GND lines sufficient. If their impedance is high, noise pickup or unstable operation may result. Connect a capacitor C1 with a capacitance value as much as 0.47 μ F or more between V_{DD} and GND pin, and as close as possible to the pins.

Set external components, especially the output capacitor C2, as close as possible to the ICs, and make wiring as short as possible.

No. 2 pin and No. 3 pin must be wired to the GND plane when it is mounted on board.

Thermal Shutdown

There is the built-in thermal-shutdown function in R1500x. It discontinues operation of the IC when the junction temperature becomes over 170°C (Typ.) and IC re-operates when the junction temperature under 145°C. If the temperature increasing keeps the IC repeats ON and OFF operating. The output becomes the pulse condition.

TYPICAL APPLICATION FOR IC CHIP BREAKDOWN PREVENTION

When a sudden surge of electrical current travels along the V_{OUT} pin and GND due to a short-circuit, electrical resonance of a circuit involving an output capacitor (C2) and a short circuit inductor generates a negative voltage and may damage the device or the load devices. Connecting a schottky diode (D1) between the V_{OUT} pin and GND has the effect of preventing damage to them.

Test Circuit for Turn On Speed with CE pin

TYPICAL CHARACTERISTICS

Note: Typical Characteristics are intended to be used as reference data; they are not guaranteed.

1) Output Voltage vs. Output Current (C1 = Ceramic 0.47 μ F, C2 = Ceramic 10 μ F, Ta = 25°C)

2) Output Voltage vs. Input Voltage (C1 = Ceramic 0.47 μ F, C2 = Ceramic 10 μ F, Ta = 25°C)

3) Supply Current vs. Input Voltage ($C1$ = Ceramic $0.47\text{ }\mu\text{F}$, $C2$ = Ceramic $10\text{ }\mu\text{F}$, $T_a = 25^\circ\text{C}$)

4) Output Voltage vs. Temperature (C1 = Ceramic 0.47 μ F, C2 = Ceramic 10 μ F, $I_{OUT} = 100$ mA)

5) Supply Current vs. Temperature (C1 = Ceramic 0.47 μ F, C2 = Ceramic 10 μ F, $I_{OUT} = 0$ mA)

6) Dropout Voltage vs. Output Current (C1 = Ceramic 0.47 μF , C2 = Ceramic 10 μF)

7) Dropout Voltage vs. Set Output Voltage (C1 = Ceramic 0.47 μ F, C2 = Ceramic 10 μ F, Ta = 25°C)

8) Ripple Rejection vs. Input Bias Voltage (C1 = none, C2 = Ceramic 10 μ F, I_{OUT} = 100 mA, Ta = 25°C)

9) Ripple Rejection vs. Frequency (C1 = none, C2 = Ceramic 10 μ F, Ripple = 0.5 V_{p-p})

10) Input Transient Response (C_1 = none, C_2 = Ceramic $10\ \mu F$, $I_{OUT} = 100\ mA$, $t_r = t_f = 10\ \mu s$, $T_a = 25^\circ C$)

11) Load Transient Response (C_1 = Ceramic 0.47 μ F, C_2 = Ceramic 10 μ F, $t_r = t_f = 0.5$ μ s, $T_a = 25^\circ$ C)

ESR vs. OUTPUT CURRENT

The relations between I_{OUT} (Output Current) and ESR of an output capacitor are shown below.

The conditions when the white noise level is under the specified certain level are marked as the hatched area in the graph.

1. The products and the product specifications described in this document are subject to change or discontinuation of production without notice for reasons such as improvement. Therefore, before deciding to use the products, please refer to Ricoh sales representatives for the latest information thereon.
2. The materials in this document may not be copied or otherwise reproduced in whole or in part without prior written consent of Ricoh.
3. Please be sure to take any necessary formalities under relevant laws or regulations before exporting or otherwise taking out of your country the products or the technical information described herein.
4. The technical information described in this document shows typical characteristics of and example application circuits for the products. The release of such information is not to be construed as a warranty of or a grant of license under Ricoh's or any third party's intellectual property rights or any other rights.
5. The products in this document are designed for automotive applications. However, when using the products for automotive applications, please make sure to contact Ricoh sales representative in advance due to confirming the quality level.
6. We are making our continuous effort to improve the quality and reliability of our products, but semiconductor products are likely to fail with certain probability. In order to prevent any injury to persons or damages to property resulting from such failure, customers should be careful enough to incorporate safety measures in their design, such as redundancy feature, fire containment feature and fail-safe feature. We do not assume any liability or responsibility for any loss or damage arising from misuse or inappropriate use of the products.
7. Anti-radiation design is not implemented in the products described in this document.
8. The X-ray exposure can influence functions and characteristics of the products. Confirm the product functions and characteristics in the evaluation stage.
9. WLCSP products should be used in light shielded environments. The light exposure can influence functions and characteristics of the products under operation or storage.
10. There can be variation in the marking when different AOI (Automated Optical Inspection) equipment is used.
In the case of recognizing the marking characteristic with AOI, please contact Ricoh sales or our distributor before attempting to use AOI.
11. Please contact Ricoh sales representatives should you have any questions or comments concerning the products or the technical information.

Ricoh is committed to reducing the environmental loading materials in electrical devices with a view to contributing to the protection of human health and the environment.

Ricoh has been providing RoHS compliant products since April 1, 2006 and Halogen-free products since April 1, 2012.
