

## 1 A 36V Input Low Supply Current LDO

NO.EA-329-201125

### OUTLINE

R1518x is a CMOS-based LDO that specifically designed for automotive applications featuring 1 A output current and 36 V input voltage. In addition to a conventional regulator circuit, R1518x consists of a constant slope circuit as a soft-start function, a fold-back protection circuit, a short current limit circuit, and a thermal shutdown circuit. Besides the low supply current by CMOS, the operating temperature is  $-40^{\circ}\text{C}$  to  $105^{\circ}\text{C}$  and the maximum input voltage is 36 V, the R1518x is very suitable for power source of car accessories.

R1518x is available in R1518xxxxB/D/E/F with the internally fixed output voltage, and R1518xxxxD/F with the auto-discharge function at standby.

The output voltage of R1518x001C can be set with an external resistor, and the setting range is from 2.5V to Max 20V. R1518xxxxB/C/D internally fixes the soft-start time at 120  $\mu\text{s}$  (Typ). R1518xxxxE/F can adjust the soft-start time with an external capacitor.

R1518x is available in two packages for ultra high wattage: HSOP-6J and TO-252-5-P2.

### FEATURES

- Input Voltage Range (Maximum Rating) ..... 3.5 V to 36.0 V (50.0V)
- Operating Temperature rang .....  $-40^{\circ}\text{C}$  to  $105^{\circ}\text{C}$
- Supply Current ..... Typ. 18  $\mu\text{A}$
- Standby Current ..... Typ. 0.1  $\mu\text{A}$
- Dropout Voltage ..... Typ. 0.7 V ( $I_{\text{OUT}} = 1 \text{ A}$ ,  $V_{\text{OUT}} = 5.0 \text{ V}$ )
- Output Voltage Accuracy .....  $\pm 0.8\%$  ( $V_{\text{OUT}} \leq 5.0 \text{ V}$ )
- Line Regulation ..... Typ. 0.01%/V
- Packages ..... HSOP-6J, TO-252-5-P2
- Output Voltage Range ..... R1518xxxxB/D/E/F:  
2.5V/3.3V/3.4V/5.0V/6.0V/8.5V/9.0V  
R1518x001C: Adjustable from 2.5 V to 20.0 V  
with external resistor  
Feedback Voltage: 2.5 V
- Built-in Short Current Limit Circuit ..... Typ. 150 mA
- Built-in Fold-Back Protection Circuit ..... Min. 1A
- Built-in Thermal Shutdown Circuit ..... Typ.  $160^{\circ}\text{C}$
- Built-in Soft-start Circuit ..... Typ. 120  $\mu\text{s}$   
R1518xxxxE/F: Adjustable Time Setting with  
External Capacitors.
- Ceramic Capacitors can be used ..... R1518xxxxB/D/E/F: 0.1  $\mu\text{F}$  or more  
R1518x001C: 1.0  $\mu\text{F}$  or more

## APPLICATIONS

- Power source for home appliances such as refrigerators, rice cookers, electric water warmers.
- Power source for notebook PCs, digital TVs, telephones, private LAN systems.
- Power source for office equipment such as copiers, printers, facsimiles, scanners, and projectors

## SELECTION GUIDE

The output voltage, version, and package type for this device can be selected at the user's request.

Product Name	Package	Quantity per Reel	Pb Free	Halogen Free
R1518Sxx1*-E2-FE	HSOP-6J	1,000 pcs	Yes	Yes
R1518Jxx1*-T1-FE	TO-252-5-P2	3,000 pcs	Yes	Yes

xx: Specify the set output voltage ( $V_{SET}$ )

2.5 V (25) / 3.3 V (33) / 3.4 V (34) / 5.0 V (50) / 6.0 V (60) / 8.5 V (85) / 9.0 V (90)

Adjustable output voltage setting type is fixed to (00)

**Note: R1518x001C-T1-#E only support**

\* : Specify the version with desired functions

B: No auto-discharge function

C: No auto-discharge function / Adjustable output voltage setting

D: Auto-discharge function

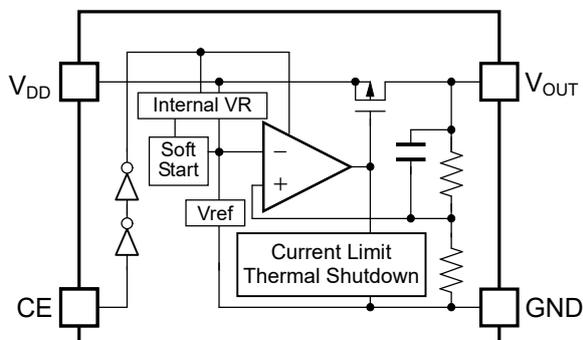

E: No auto-discharge function / Adjustable soft-start time setting

F: Auto-discharge function / Adjustable soft-start time setting

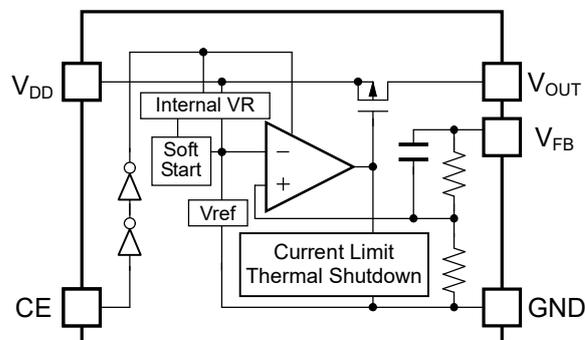

Auto-Discharge function quickly lowers the output voltage to 0 V by releasing the electrical charge in the external capacitor when the chip enable signal is switched from the active mode to the standby mode.

### ABSOLUTE MAXIMUM RATINGS

Electronic and mechanical stress momentarily exceeded absolute maximum ratings may cause the permanent damage and may degrade the life time and safety for both device and system using the device in the field. The functional operation at or over these absolute maximum ratings is not assured.

## RECOMMENDED OPERATING CONDITIONS

### Recommended Operating Conditions

Symbol	Parameter	Rating	Unit
$V_{IN}$	Input Voltage	3.5 to 36	V
$T_a$	Operating Temperature Range	-40 to 105	°C

### RECOMMENDED OPERATING CONDITIONS

All of electronic equipment should be designed that the mounted semiconductor devices operate within the recommended operating conditions. The semiconductor devices cannot operate normally over the recommended operating conditions, even if they are used over such ratings by momentary electronic noise or surge. And the semiconductor devices may receive serious damage when they continue to operate over the recommended operating conditions.

## OPERATION DESCRIPTION

### Thermal Shutdown Function

Thermal shutdown function is included in this device. If the junction temperature is more than or equal to 160°C (Typ.), the operation of the regulator would stop. After that, when the junction temperature is less than or equal to 135°C (Typ.), the operation of the regulator would restart. Unless the cause of rising temperature is removed, the regulator repeats on and off, and output waveform would be like consecutive pulses.

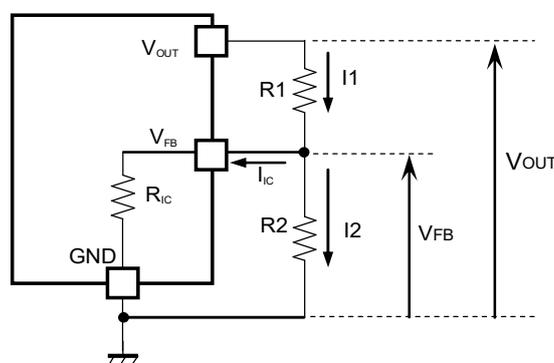

### Adjustable Output Voltage Setting (R1518x001C)

The output voltage of R1518x001C can be adjusted by using the external divider resistors (R1, R2). By using the following equation, the output voltage ( $V_{OUT}$ ) can be determined. The voltage which is fixed inside the IC is described as  $V_{FB}$ .

$$V_{OUT} = V_{FB} \times ((R1 + R2) / R2)$$

Recommended Range:  $2.5 \text{ V} \leq V_{OUT} \leq 20.0 \text{ V}$

$$V_{FB} = 2.5 \text{ V}$$

**Output Voltage Adjustment Using External Divider Resistors (R1, R2)**

$R_{IC}$  of the R1518x001C is approximately Typ. 1.35 M $\Omega$  ( $T_a=25^\circ\text{C}$ , guaranteed by design engineering). For better accuracy, setting  $R1 \ll R_{IC}$  reduces errors. The resistance value for R2 should be set to 10 k $\Omega$  or lower. It is easily affected by noises when setting the value of R1 and R2 larger, which makes the impedance of  $V_{FB}$  pin larger.

$R_{IC}$  could be affected by the temperature, therefore evaluate the circuit taking the actual conditions of use into account when deciding the resistance values for R1 and R2.

### Soft-start Function

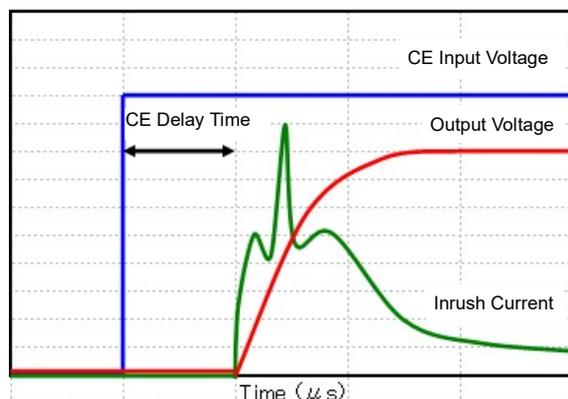

R1518x is equipped with a constant slope circuit, which achieves a soft-start function. This circuit allows the output voltage to start up gradually when the CE is turned on. The constant slope circuit minimizes the inrush current at the start-up and also prevents the overshoot of the output voltage. For R1518xxxxB/C/D, the capacitor to create the start-up slope is built in this device that does not require any external components. The start-up time and the start-up slope angle are fixed inside the device. As for R1518xxxxE/F, the soft-start time is adjustable by inserting the external capacitor to DELAY pin. By using the following equation, the relation between the soft-start time  $t_D$  [s] and DELAY pin capacitor  $C_D$  [F] is determined.

$$t_D = ((C_D + 90 \times 10^{-12}) / I_{\text{DELAY}}) \times 0.73$$

When the capacitor  $C_D$  of R1518xxxxE/F is not used, use the DELAY pin as OPEN. At that time,  $C_D = 0$  in the above equation, therefore the start-up time is about 26  $\mu\text{s}$ . However, be sure to consider approximately 50  $\mu\text{s}$  of CE delay time.

C2 (C <sub>OUT</sub> )	1.0μF (Ceramic)

**ESR vs. Output Current**

It is recommended that a ceramic type capacitor be used for this device. However, other types of capacitors having lower ESR can also be used. The relation between the output current ( $I_{OUT}$ ) and the ESR of output capacitor is shown below.

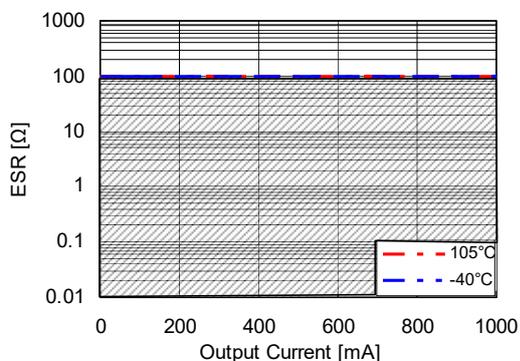

**Measurement conditions**

- Frequency Band: 10 Hz to 2 MHz
- Measurement Temperature: -40°C to 105°C
- Hatched area: Noise level is 40 µV (average) or below
- Capacitor: C1 = Ceramic 0.1 µF, C2 = 0.1 µF

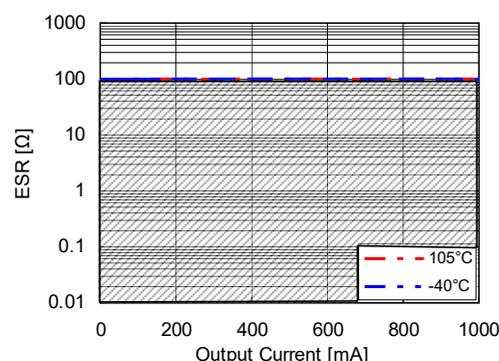

**R1518x25xx Output Current  $I_{OUT}$  vs. ESR**

$V_{in}$ =2.5V to 36V

**R1518x85xx Output Current  $I_{OUT}$  vs. ESR**

$V_{in}$ =8.5V to 36V

## TECHNICAL NOTES

### Phase Compensation

In LDO regulators, phase compensation is provided to secure stable operation even when the load current is varied. For this purpose, use 0.1  $\mu\text{F}$  or more (R1518xxxxB/D/E/F), 1.0  $\mu\text{F}$  or more (R1518x001C) of the capacitor C2. When using a tantalum type capacitor and the ESR (Equivalent Series Resistance) value is large, the output might be unstable. Evaluate the circuit including consideration of frequency characteristics. For the externally adjustable output voltage type (R1518x001C), use 10  $\text{k}\Omega$  or lower resistance R2.

### PCB Layout

Ensure the  $V_{\text{DD}}$  and GND lines are sufficiently robust. If their impedance is too high, noise pickup or unstable operation may result. Connect 0.1  $\mu\text{F}$  or more of the capacitor C1 between the  $V_{\text{DD}}$  and GND, and as close as possible to the pins.

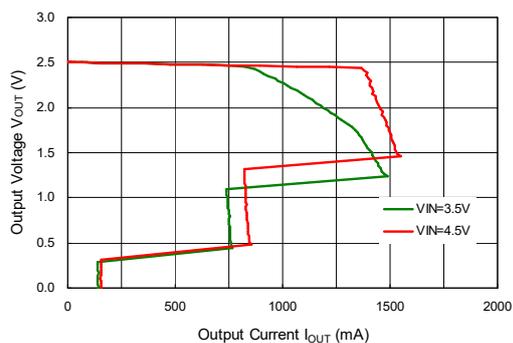

In addition, connect the capacitor C2 between  $V_{\text{OUT}}$  and GND, and as close as possible to the pins.

1. The products and the product specifications described in this document are subject to change or discontinuation of production without notice for reasons such as improvement. Therefore, before deciding to use the products, please refer to Ricoh sales representatives for the latest information thereon.
2. The materials in this document may not be copied or otherwise reproduced in whole or in part without prior written consent of Ricoh.
3. Please be sure to take any necessary formalities under relevant laws or regulations before exporting or otherwise taking out of your country the products or the technical information described herein.
4. The technical information described in this document shows typical characteristics of and example application circuits for the products. The release of such information is not to be construed as a warranty of or a grant of license under Ricoh's or any third party's intellectual property rights or any other rights.
5. The products listed in this document are intended and designed for use as general electronic components in standard applications (office equipment, telecommunication equipment, measuring instruments, consumer electronic products, amusement equipment etc.). Those customers intending to use a product in an application requiring extreme quality and reliability, for example, in a highly specific application where the failure or misoperation of the product could result in human injury or death (aircraft, spacevehicle, nuclear reactor control system, traffic control system, automotive and transportation equipment, combustion equipment, safety devices, life support system etc.) should first contact us.
6. We are making our continuous effort to improve the quality and reliability of our products, but semiconductor products are likely to fail with certain probability. In order to prevent any injury to persons or damages to property resulting from such failure, customers should be careful enough to incorporate safety measures in their design, such as redundancy feature, fire containment feature and fail-safe feature. We do not assume any liability or responsibility for any loss or damage arising from misuse or inappropriate use of the products.
7. Anti-radiation design is not implemented in the products described in this document.
8. The X-ray exposure can influence functions and characteristics of the products. Confirm the product functions and characteristics in the evaluation stage.
9. WLCSP products should be used in light shielded environments. The light exposure can influence functions and characteristics of the products under operation or storage.
10. There can be variation in the marking when different AOI (Automated Optical Inspection) equipment is used. In the case of recognizing the marking characteristic with AOI, please contact Ricoh sales or our distributor before attempting to use AOI.
11. Please contact Ricoh sales representatives should you have any questions or comments concerning the products or the technical information.

**Ricoh is committed to reducing the environmental loading materials in electrical devices with a view to contributing to the protection of human health and the environment.**

Ricoh has been providing RoHS compliant products since April 1, 2006 and Halogen-free products since April 1, 2012.
