Descriptions

The DIO3212 is a low power, dual SPDT 2-port high-speed analog switch. It handles bi-directional signal flow and is optimized for switching a high-speed (480Mbps) source. DIO3212 has high channel-to-channel noise isolation and low bit-to-bit skew which allows it to pass high-speed differential signals with good signal integrity. Each switch offers little or no attenuation of the high-speed signals at the outputs.

The DIO3212 contains special circuitry on the D+/D- pins, which can tolerate up to 5.25V when the USB devices are either powered off or powered on.

Absolute Maximum Ratings

Stresses beyond those listed under "Absolute Maximum Rating" may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other condition beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Symbol	Parameter	Min.	Max.	Unit
V _{CC}	Supply Voltage	-0.5	5	V
V _{SW}	DC Switch Voltage	-0.5	7	V
V _{IN}	DC Input Voltage	-0.5	7	V
V _{D+/D-}	D+/D- DC voltage ^(Note 1)	-0.3	9	V
I _{SW}	On-state Switch Current	-120	120	mA
	Continuous current through V _{CC} or GND	-100	100	mA
T _{STG}	Storage Temperature Range	-65	150	°C
θ _{JA}	DFN10 Package		48.7	°C/W
	QFN10 Package		243	°C/W
ESD	HBM, JEDEC: JESD22-A114 (I/O to GND)		8	kV
	CDM, JEDEC: JESD22-C101		2	

Note 1:This rating only applies to the D+/D- pin with respect to GND. V_{CC} must be powered within the recommended operating conditions of 2.3V to 5V and the OE pin must be logic high for this rating to be applicable. Any condition where V_{CC} is unpowered or the OE pin is not high must reference the rest of the Absolute Maximum Ratings Table.
