RF 15 with RK 90 System

CE-Conformity

The products of the Chapter "PCB Keyswitches" can – relating to the CE-conformity according to the Low-Vol-tage Directive 73/23/EWG – be divided into the following groups:

All products with an operating voltage $U_B > 50 V$ F. ex. Short-Travel Main Switch KN 19, for this product the Low-Voltage Directive 73/23/EWG applies.

All products with an operating voltage $U_B < 50 V$

F. ex. MICON, RACON, RF 15, RS 76, for these components no directive applies.

Single parts, accessories and illumination No directive applies for these products.

EMC-Law

The components of this catalogue are within the meaning of the law concerning the electromagnetic conformity (= EMC-Law) "basic components as, for ex., switches, signal lamps or like" and, therefore, do not fall within the scope of the EMC-Law.

Declarations of Conformity

Declarations of conformity for all concerned products are available and can be delivered upon request. Please always state the exact order reference of the respective product.

Marking

The marking will be corresponding to the Low-Voltage Directive 73/23/EWG resp. the Directive "CE-Marking 93/68/EWG" either on the packing or on the product itself or on the shipping documents.

UL-approval

for MICON 5, RACON 8/12, Short-Travel Keyswitches RF 15/19

Data entry systems wich are built with Rafi short-travel switches according to our design proposals meet the requirements of the UL approvals for the American market.

UL file no. for KN 19: E 116362 UL file no. for data entry systems: E 202520

PCB Keyswitches

General Data

Short-travel switch range MICON 5, with sealed contact system, clear key click and extremely reliable switching. Use under overlay or under keycaps RK 90. THT and SMT versions which can be mounted automatically.

MICON

NEW **MICON 5 - Short-travel keyswitches**

General Data

MICON 5 short-travel keyswitches offer an extremely high switching reliability while needing very little space. They can be arranged as single keys, in rows or key blocks. When arranged under an overlay, MICON keyswitches should be combined with plungers.

The features at a glance:

- Suitable for the most common soldering methods
 - Wave soldering bath for THT versions
- Reflow soldering for SMT version
- Vapour phase soldering for SMT versions
- Manual soldering
- SMT version suitable for processing with an automatic SMT assembly machines
- IMDS listed

You can download actual product information from our internet site www.rafi.de / Catalogues and Downloads

Δ

NEW MICON 5 - Short-travel keyswitch, SMT Standard

Technical data see page 4 - 4

Packing: in tape, reel with 2100 pieces Keycaps see RK 90

Mounting hints:

Special pipette (Siemens Siplace order no.: 348514-02), mounting with collect and place head Recommendation for screen printing: 150 µm stencil with 10% reduction of the pad size.

4

MICON

MICON 5 - Short-travel keyswitch, SMT low

Technical data see page 4 - 4

Packing: in tape, reel with 2100 pieces Keycaps see RK 90

Mounting hints:

Special pipette (Siemens Siplace order no.: 348514-02), mounting with collect and place head Recommendation for screen printing: 150 µm stencil with 10% reduction of the pad size.

Technical data see page 4 - 4

Packing: in tubes with 102 pieces Keycaps see RK 90

NEW **MICON 5 - Plungers round, not illuminable**

General Data

- A -Height of keyswitch: SMT type: 3.85 mm, THT type: 3.80 mm
- D -Length of spacer D = GH - KP - FP
- FD Front panel cut-out FD = ST + 1 mm
- FP Front panel thickness
- GH Overall height: GH = A + L1 + 0.05 (SMT type), GH = A + L1 (THT type)
- KP Thickness of overlay + embossing KS Glue webs for overlay, min. 3 mm
- L1 Length of plunger above keyswitch L1 = GH A
- L -Overall length of plunger L = L1 + 1.3 mm (min. 3 mm)
- RM Key grid RM = FD + KS
- ST Diameter of plunger

The plungers can only be combined with MICON 5 version Standard (red bubble).

MICON

MICON 5: Just feel it.

AUTOMOTIVE

There is no miniature keyswitch which has a better tactile and acoustic feedback than the new RAFI MICON 5 short-travel keyswitch.

INSTRUMENTATION-CONTROL-AUTOMATION

MEDICAL TECHNOLOGY

The little one shows its excellence reliable switching behaviour in under keycaps, membrane overlays or elastic seals. Outstanding tactile feedback and absolutely

demanding applications, including hostile environments. MICON 5 test it!

RACON

PCB Keyswitches

RACON 12 V - Short-travel keyswitch with vertical adapter

General Data

The RACON 12 V version can be used, for example, for PC plug-in boards and for measurement and control engineering applications. The vertical mounting adapter (support element) absorbs the operating force so that the pressure on the soldered terminals is reduced. For this mounting arrangement, the keyswitch is provided with two horizontal terminals on one side.

RACON

Λ

RACON 12 i - Short-travel keyswitch

General Data

Application note

Low-profile keyboards with RACON 12 i components should be designed with a grid spacing of 15.24 mm. With this grid, frame webs remain free between the individual keys. The overlay can be glued onto these frame webs; we recommend area embossing over the keys for the overlays. If our RK 90 system design is used, we recommend the 9 x 9 mm keycaps.

NEW RK 90 II, Key cap system for RACON 12 with individual sealing

Technical Data

General information

Thickness of front panel	3.00 mm
Light conductor	see order block
Key grid	min. 16.8 x 17.5 mm
Degree of protection	IP 65

The key cap system RK 90 II has been developed especially fort he short-travel keyswitch RACON 12. The lenses are snapped onto the sealing frame and then set onto the RACON 12 keyswitches. The PCB presses this units against the front panel, so they are sealed.

Two versions of the sealing frames are provided with light conductors, either in square ore triangle form. The lenses can be legended directly with laser. For bright letters (see picture) first white lenses are painted in dark, then the letters are cut out of the dark colour with laser.

Double-spot LED illumination available on request

Technical data of LED see seperate page at the beginning of this chapter.

RF 15 N - Short-travel keyswitch

General Data

The RF 15N keyswitch provides a minimum overall height of 6.2 mm. The overall height can be varied by extension plungers which are inserted into the cross-like notches on the actuator tops.

LEDs can only be arranged separately next to the keyswitches up to an overall height of 10 mm (i.e. without plunger or with small plunger).

Keyswitches with overall heights of 12 mm or more can be provided with a maximum of 2 LEDs which are inserted into the recesses of the keyswitch housing. LEDs of keyswitches with overall heights of 12.5 mm or more should be placed onto LED spacers in order to obtain satisfactory illumination.

Technical data see page 4 - 48

For keycaps, refer to RK 90 system design. Double-spot LED illumination available on request.

RF 15 R - Short-travel keyswitch

General Data

The round actuator of the RF 15 R keyswitch requires round front panel cut-outs. These make it possible to use a narrow keyboard grid of only 15.24 mm with sufficiently large frame webs between the individual keys. We recommend area embossing over the actuators for the overlay.

RF

RF 15 H - Short-travel keyswitch

General Data

Application notes:

The RF 15 H key has an overall height of 12.5 mm and can be fully illuminated. When designing membrane keyboards, we recommend using a key grid of at least 20 mm and a 0.13 mm overlay with area embossing over the keys. You can use the O-ring (accessory) to block the key and use it as an indicator field or blank spaceholder.

RF

RF 19 - Short-travel keyswitch

General Data

Application notes:

RF 19 keys offer a large actuation area. When designing low-profile keyboards with a grid of >= 23 mm, frame webs remain free between the individual keys.

The overlay can be glued onto these frame webs; we recommend area embossing over the keys for the overlay.

KN 19 - Short-travel main switch	4 - 88

KN 19

KN 19 - Short-travel main switch

General Data

The KN 19 makes it possible to implement a power switch directly in a low-profile data entry system. This eliminates the need for extra switches on the device and additional openings in the overlay. In this way, you can achieve an optimum of safety and a consistent design.

The contact opening widths comply with the VDE standards. The KN 19 can also be employed underneath RK 90 keycaps. Other actuation functions (momentary, latching/momentary) available on request.

Technical Data

General information		Electrical characteristics	
Recommended key grid	19.05 x 38.1 mm	Rated voltage AC min.	12 V
		Rated voltage DC min.	12 V

Δ

Keycap system RK 90

Example with RF 15 keyswitches. Instead of RF 15 following keyswitches can be used:

- MICON 5
- RACON 8/12
- RF 15 keyswitches and signal indicators
- RF 19 keyswitches and signal indicators
- Short-travel main switch KN 19

The RK 90 system was granted the prize of the Design Forum of the Hannover Fair. Degree of protection: IP65 according to DIN in front of the panel, with silicone sealing.

Installation methods

Δ

Mounting from front

Sealing foil between RK 90 keyboard and customer's front panel.

Mounting from rear

Sealing foil is screwed to RK 90 panel with fixing rails; sealing between keyboard and customer's front panel has to be provided.

Legending

- Laser printing: This labelling method is possible for opaque keycaps. The symbols are engraved in the keycaps with laser.
- When using transparent lenses, the pressure pad can be legended by printing.

As the legending is protected by the lens, it is frictionproof.

• **Engraving:** With this method the keycaps are engraved with the required symbol and then inlaid with ink.

Recommendations

- Front panel thickness:
 - Aluminum: 2 mm (1.5 mm min, 3 mm max.) (Fixing with M 3 pressed-in studs)
 - **Steel**: 2 mm (3 mm max.): V2A: 1.25 mm (Fixing with M 3 welded-on studs) The keytop surface is flush with the keyboard at a panel thickness of 3.5 mm.
- Silicone sealing:

Material: Silicone transparent Type: A-SY 40-79 Hardness: 30° shore +/- 5° Thickness: 0.45 +/- 0.05 mm

• Installation: Ensure that the keyboard slopes slightly so that any liquid can drain away between front panel and silicone sealing; if necessary, provide additional drain holes in the front panel.

Cleaning liquids

For the cleaning of the plastic keycaps please do not use cleaning liquids based on alcohol or acid.

RK 90

Δ

RK 90 - Keycaps, plastic, 9 x 9 mm

General Data

You can design especially small input fields with the small keycap 9 x 9 mm. For example, controls for measurement and laboratory equipment which do not offer much space for input fields because of their small size. RK 90 keycaps 9 x 9 mm and RACON short-travel keyswitches can be used to implement key grids of only 12.5 mm. The keycaps can be legended by laser-printing, engraving or standard printing.

This keycap is our first choice in a combination with the illuminated RACON 12 i short-travel keyswitch.

Please note: For the cleaning of the plastic keycaps please do not use cleaning liquids based on alcohol or acid.

RK 90 - Keycaps, aluminum, 14 x 14 mm

General Data

The RK 90 system design with metal keycaps is fairly safe against mechanical, thermal or chemical effects. Combined with a metal front panel, this data entry system offers maximum protection against vandalism. Tried and tested MICON 5, RACON 8/12 or RF 15/19 PCB keyswitches are used underneath the metal keycaps.

The keycaps can be provided with engraved, coloured anodized or laser-printed legends. This means that the legend is durable and cannot be removed by mechanical or chemical means.

General Data

Vandal-proof input system, ideally suited for elevator controls, info terminals, vending machines, etc.

- Edge illumination and symbol illumination possible
- Connection: Each module individually with an 8-pin Micro-Match socket connector
- Modular fixing system with quick fasteners or single fixing
- Contact arrangement: 1 NO contact or 1 NC + 1 NO contact
- 50 V/250 mA max.
- Degree of protection IP65 (keylock switch IP40).

System Features

Perfectly suited for: elevator controls, info terminals, vending machines, etc.

- Vandal proof construction
- Modular fixing system with quick fasteners or single fixing method using thread studs
- Connection with keyed 8-pin micro-match connector
- Degree of protection: IP40/65

Keylock Switch Features

- Round or square design and lens shape
- Edge illumination in one or two colours with 4 LED for each colour
- Lens material: Aluminum or stainless steel with plastic inlays
- Contact arrangement: 1 NO
- Cylinder lock with pin tumblers
- Two switching positions: 0 and 90 degrees, key can be removed in any position
- Lock type 5201 other lock types on request
- Included: 2 keys

Micro-Match Connector Pin Assignment

1/3 NO contact

- 2 OV-LED
- 4 Edge illuminat./signal indicator 1st colour + 24 V DC +/- 20%
- 5 Symbol illumination + 24 V DC +/- 20%
- 6 Edge illuminat./signal indicator 2nd colour + 24 V DC +/- 20%
- 7/8 NC contact

Pushbutton Features

- Round or square design and lens shape
- Edge illumination in one or two colours with 4 LED for each colour
- Pushbutton with 1 NO contact: Additional illumination of the symbol with 2 LED possible
- Lens material: Aluminum or stainless steel with plastic inlays
- Switching element: short-travel keyswitch RF 19
 - 1 NO contact, non-illuminated
 - 1 NO contact, fully illuminated
 - 1 NC contact and 1 NO contact, non-illuminated

Signal Indicator Features

- Lens shape round, square or triangular (arrow shape)
- Lens material: Translucent plastic material
- Fully illuminated with 5 LED

General Data

The RS 76 full-travel keyswitches are designed for configuring keyboards. They offer very comfortable operation with an overall height of 15.5 / 15.9 mm and a key travel of 4 mm. The modular system with a grid of 3/4" = 19.05 mm enables you to design any key block you may want.

Mechanical contact system RS 76 M

A gold alloy is used as the contact material and provides high contact reliability, low contact resistance and short bouncing time.

Solid-state contact system RS 76 C

The solid-state switch in Hall-IC technology ensures bounce-free and wear-free switching and a long operating life. Function: When pressing the keys, a permanent magnet changes its position relative to the Hall-IC and thereby generates an output signal. Their use is especially recommended in hostile environments and for heavy duty applications.

RS 76

The RAFI full-travel keyswitches RS 76 are modular systems for designing individual key blocks and keyboards in the 3/4 inch (= 19.05 mm) grid.

Definitions

Momentary keyswitches

Momentary keyswitches return to their initial position after being pressed (momentary action).

Latching keyswitches

Latching keyswitches lock when actuated and are returned to their initial position when pressed again (push-push action).

Keycap materials

Keycap without legend insert: ABS Keycap with legend insert: – Keycap body: ABS

– Lens: PC

Keycap, n-module

A 2-module keycap f. ex. has the twofold length of a 1-module keycap.

Contact principle

There are two contact principles: - Mechanical (M): Cross contact (RS 76 M) Bridge contact (RS 76 M, illuminated) - Contactless (C): Based on Hall-IC (RS 76 C)

Manual Soldering

The soldering temperature should not exceed 300 °C and the soldering time should be less than 5 seconds.

Soldering process wave soldering

Wave soldering is permitted.

Legending of keycaps

Keycaps can be legended by different methods:

Two-shot moulding

Using this method the symbol is separately manufactured from a plastic and then the appropriate keycap form is moulded round it. Advantage: The character becomes a integrated part of the keycap, thus eliminating abrasion. All RAFI keycap sets with standard legending are manufatured by this method.

Customer specific two-shot moulded keycaps on request.

Printing

Keycaps can be printed with a two-component ink on request. The abrasin of this kind of legending is high. This method of legending is suitable for average volumes.

Engraving

In this labour intensive process the keycaps are engraved with the required symbol, then inlaid with ink. Only used for small volumes.

Laser-printing

This method of legending can be recommended when complete keyboards are required in different keyboard layouts for which RAFI will develop the respective software. The keyboards can then be legended within a short time. This method of legending ist particularly recommended for average to large volumes.

Legend inserts

In the case of keycaps with replaceable legend inserts it is possible to print or engrave the legend inserts. As these insets are protected by the lens, there can be no abrasion here either.

Design

No. Description

- 1.1 Keyswitch RS 76 C
- 1.2 Keyswitch RS 76 C with LED
- 1.3 Keyswitch RS 76 M
- 1.4 Keyswitch R 76 M with LED
- 2
- Keycap, 1- resp. multi-module Keycap with nail protection, 1- resp. multi-module 3
- 5 Keycap, illuminated
- Keycap, illuminated 6
- Keycap, illuminated 7
- 9.1 LED

- 9.2 Spacer for LED (for RS 76 C only) 10.1 Plunger for mult-moduel keycaps*
- 10.2 Sleeve for multi-moduel keycaps*
- 10.3 Metal lever for multi-module keycaps*
- 10.4 Bearing bracket for multi-module keycaps*
- 11 Covers

*These parts are included as a complete packet in the delivery of keycaps \geq 2-module.

RS 76

Hole Pattern PCB RS 76 M/RS 76 C

The hole patterns apply to the horizontal position of the keycaps only. Should they be in a vertical position,

the momentary keyswitch must be mounted accordingly, i. e. rotated by 90°.

For 2-, 3- and 8-module keycaps (view on component side)

RS 76 M/C

Кеусар	L 1 mm	L 2 mm
2-module	25,40	22,86
3-module	30,48	24,13
5-module	68,58	68,58

Important note: In the case of 2-, 3- and 8-module keycaps, additional holes must be provided for the accessories.

In the case of keycaps < 2-module, neither accessories nor holes are required.

Specific Technical Data RS 76 C

Output pulse diagram Dynamic characteristics (max.)		Tw = 25 °C	Tw = 50 °C	Tw = 70 °C
Turn-on delay time	t _{PHL}	3 µs	7 µs	10 µs
Turn-off delay time	t _{PHL}	4 µs	5 µs	6 µs
Fall/rise time	t _{PHL}	2 µs	2,5 µs	3 µs
	t _{PHL}	1 µs	1,5 µs	2,5 µs

Examples for Application RS 76 C

Driving of logic components

Indication of logical states

Driving of a PNP transistor

Use as static key with open collector output. Output transistor (NPN) is conductive when actuated.

RS 76 M - Full-travel keyswitch, not illuminable

Priority keylock switch IP54

General Data

Either 2 or 3 different keys are required, depending on the angle between positions. Key 1 can switch to position 1, key 2 can switch to position 1 and 2, etc.

Technical Data

Dielectric strength AC min.

Rated power max.

General information		Electrical characteristics	
Colour	see order block	Rated voltage	2 35 V
Form of collar	square	Rated current max.	100 mA
	-	Contact resistance when new	100 m Ω
Dimensions		max.	
Length of collar	19 mm	Contact resistance acc. to	200 m Ω
Width of collar	19 mm	life max.	
Overall height	19.5 mm	Insulation resistance	10 ⁹ Ω
		ESD strength max.	8 kV
Mechanical design			
Mounting	soldering	Other specifications	
Terminals	tin-plated	Rotating angle	see order block
Contact system	cross contact self	Operating life	10,000
-	cleaning	Degree of protection from	IP54
Contact function	see order block	front side	
Contact materials	Au alloy	Ambient temp. operating min.	-25 °C
Illuminability	no	Ambient temp. operating max.	+70 °C
Lock	Micromec	Storage temperature min.	-40 °C
Wafers	5	Storage temperature max.	+80 °C
Lock type	001	Environmental restistance	acc. to IEC 60068-2
Number of locking positions	500		-14, -30, -33 and -78
Main key	on request	Flammability of materials	UL 94 HB
Key removal position	see order block		
Mechanical characteristics			
Switching torque	0.04 0.10 Nm		
Robustness max.	2 Nm
