- Notes:
- VDDQ tracks with VDD; VDDQ and VDD are tied together.
 - DC bandwidth is limited to 20 MHz.
 - VREFCA must not be greater than 0.6 x VDD. When VDD is less than 500mV, VREF may be less than or equal to 300mV.
 - VTT termination voltages in excess of specification limit will adversely affect command and address signals' voltage margins, and reduce timing margins.
 - Tied to ground. Not connected to edge connector.

Operating Temperature Condition

Symbol	Parameter	Rating	Units	Notes
TOPER	Operating temperature	Commercial	°C	1,2
		Industrial		

- Notes:
- Operating temperature is the case surface temperature on the center/top side of the DRAM. For the measurement conditions, please refer to JEDEC JESD51-2.
 - At -40°C to +85°C, operation temperature range, all DRAM specifications will be supported. The refresh rate is required to double when 85°C < TOPER <= 95°C.

Note: 1. The maximum read preamble is bounded by tLZ(DQS)min on the left side and tDQSCK(max) on the right side. Boundary of DQS Low-Z occur one cycle earlier in 2tCK toggle mode. 2. DQ falling signal middle-point of transferring from High to Low to first rising edge of DQS diff-signal cross-point. 3. Parameters apply from tCK(avg)min to tCK(avg)max at all standard JEDEC clock period values as stated in the Speed Bin Tables. 4. 16Gb A-die 2Gx8 product supports both tRFC1 550ns and 350ns setting. It depends on customer's preference. tRFC2 and tRFC4 needs to be set corresponding to each setting values.
