

ARTESYN HPR12K SERIES

12KW Rack for HPS3000

PRODUCT DESCRIPTION

Advanced Energy's Artesyn HPR12K Series is a 12KW Rack for HPS3000. One standard 19 in rack shelf can fit down 4 units of HPS3000.

AT A GLANCE

GENERAL INSTALL

Connecting the input power cable, output load cable, and communication wire according to the below figure.

GENERAL SETTING

Unless otherwise specified, when the PSON# switch is de-asserted (48V o/p is disabled). It means the Manual ON/OFF DIP switch SW1 should default according to the below table. And It must be checked before shipping.

Table 1. DIP switch SW1 setting as a default

Power Supplies Status	PSU 1#		PSU 2#		PSU 3#		PSU 4#	
	CH1	CH2	CH3	CH 4	CH5	CH6	CH7	CH8
OFF	Up	Down	Up	Down	Up	Down	Up	Down

Note 1. The status Down means set to ON position. The status UP means set to OFF position.

Note 2. Programming Switch SW1 default settings: PSON switches: OFF PSKILL switches: ON

ON/OFF OPERATION (PSON#)

Manual ON/OFF Operation

The DIP switch SW1 is used to turn on or off the PSU manually. The PSU in SLOT1 is turned on when the CH1 of DIP switch SW1 turns on. For the other PSU see Table 2.

Note: DIP switch CH2 should be set to ON as a default. In case CH2 is set to off, the power supply in slot 1 will not turn on even if CH1 is set to ON position.

Table 2. PSON# Switch Characteristics

Power Supplies Status	PSU 1#		PSU 2#		PSU 3#		PSU 4#	
ON	Down	Down	Down	Down	Down	Down	Down	Down
OFF	UP	Down	UP	Down	UP	Down	UP	Down

Note. The status Down means set to ON position. The status UP means set to OFF position.

Figure 1. DIP Switch for ON/OFF Operation

Figure 2. The SLOTS define of Rack

ON/OFF OPERATION (PSON#)

Remote ON/OFF

The per PSON# signal is required to remotely turn on/off the power supply. PSON# is an active low signal that turns on the +48VDC power rail. When this signal is not pulled low by the system, or left open, the +48VDC output turns off. The 5Vsb output remains on. This signal is pulled to a standby voltage by a pull-up resistor internal to the power supply. The power supply fan(s) shall operate at the lowest speed.

Table 3. PSON# Signal Characteristics

Signal Type	Accepts an open collector/drain input from the system. Pulled-up to the 3V3sb located inside the power supply.	
PSON# = Low	ON	
PSON# = Open	OFF	
Logic level low (power supply ON)	MIN	MAX
Logic level high (power supply OFF)	0V	0.4V
Source current, Vpson = low	2.4V	3.4V
Power up delay: T pson_on_delay		4mA
	5msec	400msec

Refer to IPS of HPS3000-9 PN: 41966008950

PMBus COMMUNICATION

The per power supplies can be communicated with the computer by our GUI interface hardware and software.

ABOUT ADVANCED ENERGY

Advanced Energy (AE) has devoted more than three decades to perfecting power for its global customers. AE designs and manufactures highly engineered, precision power conversion, measurement and control solutions for mission-critical applications and processes.

Our products enable customer innovation in complex applications for a wide range of industries including semiconductor equipment, industrial, manufacturing, telecommunications, data center computing, and medical. With deep applications know-how and responsive service and support across the globe, we build collaborative partnerships to meet rapid technological developments, propel growth for our customers, and innovate the future of power.
