

AVO120-48S12

120 Watts

Eighth-brick Converter

Total Power: 120 Watts
Input Voltage: 36 to 75 Vdc
of Outputs: Single

Special Features

- Delivers up to 10A output current
- Industry standard Eighth-brick
- Basic isolation
- Ultra high efficiency 93% typ. at 100% load
- wide input voltage of 36-75V
- CNT function
- Remote sense
- Trim function: +10%/-20%
- Input under-voltage lockout
- Output over-current protection (hiccup)
- Output over-voltage protection (hiccup)
- Over-temperature protection
- RoHS compliant
- Standard module with base plate
- Pin length option: 4.8mm
- Excellent thermal performance
- No minimum load requirement
- pre-bias function

Safety

IEC/EN/UL/CSA 60950 2nd

FCC/EN55022 Class A

Product Descriptions

The AVO120-48S12 is a single output DC/DC converter with standard eighth-brick form factor and pin configuration. It delivers up to 10A output current with 12V output. Ultra-high 93% efficiency and excellent thermal performance makes it an ideal choice for use in datacom and telecommunication applications and can operate over an ambient temperature range of -40 °C ~ +85 °C.

Applications

Telecom/ Datacom

Absolute Maximum Ratings

Stress in excess of those listed in the “Absolute Maximum Ratings” may cause permanent damage to the power supply. These are stress ratings only and functional operation of the unit is not implied at these or any other conditions above those given in the operational sections of this TRN. Exposure to any absolute maximum rated condition for extended periods may adversely affect the power supply’s reliability.

Table 1. Absolute Maximum Ratings:

Parameter	Model	Symbol	Min	Typ	Max	Unit
Input Voltage						
Operating -Continuous	All	$V_{IN,DC}$	0	-	80	Vdc
Non-operating -100mS	All		0	-	100	Vdc
Maximum Output Power	All	$P_{O,max}$	-	-	60	W
Ambient Operating Temperature	All	T_A	-40	-	+85	°C
Storage Temperature	All	T_{STG}	-55	-	+125	°C
Voltage at remote ON/OFF pin	All		-0.7	-	12	V
Humidity (non-condensing)						
Operating	All		-	-	95	%
Non-operating	All		-	-	95	%
Isolation Voltage ¹						
Input to outputs	Open-frame modules		-	-	2000	Vdc
Input to baseplate	Baseplate modules		-	-	1000	Vdc
Outputs to baseplate	Baseplate modules		-	-	1000	Vdc
Isolation Resistance	All		10	-	-	Mohm

Note 1 - 1mA for 1min, slew rate of 2000V/10s

Input Specifications

Table 2. Input Specifications:

Parameter	Conditions ¹	Symbol	Min	Typ	Max	Unit
Operating Input Voltage, DC	All	$V_{IN,DC}$	36	48	75	Vdc
Turn-on Voltage Threshold	$I_O = I_{O,max}$	$V_{IN,ON}$	31	34	36	Vdc
Turn-off Voltage Threshold	$I_O = I_{O,max}$	$V_{IN,OFF}$	30	33	35	Vdc
Lockout voltage hysteresis	All	-	1	-	3	V
Maximum Input Current ($I_O = I_{O,max}$)	$V_{IN,DC} = 36V_{DC}$ $I_O = I_{O,max}$	$I_{IN,max}$	-	-	4.5	A
Inrush current transient rating			-	-	1	A ² s

Environmental Specifications

Electromagnetic compatibility Characteristics

Table 4. Environmental Specifications:

Document	Description	Criteria
EN55022, Class A Limits	Conducted and Radiated EMI Limits	/
IEC/EN 61000-4-2, Level 3	Electromagnetic Compatibility (EMC) - Testing and measurement techniques - Electrostatic discharge immunity test. Enclosure Port	B
IEC/EN 61000-4-6, Level 2	Electromagnetic Compatibility (EMC) - Testing and measurement techniques, Continuous Conducted Interference. DC input port	B
IEC/EN 61000-4-4, Level3	Electromagnetic Compatibility (EMC) - Testing and measurement techniques, Electrical Fast Transient. DC input port.	B
IEC/EN 61000-4-5	Electromagnetic Compatibility (EMC) - Testing and measurement techniques, Immunity to surges - 600V common mode and 600V differential mode for DC ports	A
EN61000-4-29	Electromagnetic Compatibility (EMC) - Testing and measurement techniques, Voltage Dips and short interruptions and voltage variations. DC input port	B

Criterion A: Normal performance during and after test.

Criterion B: For EFT and surges, low-voltage protection or reset is not allowed. Temporary output voltage fluctuation ceases after disturbances ceases, and from which the EUT recovers its normal performance automatically. For Dips and ESD, output voltage fluctuation or reset is allowed during the test, but recovers to its normal performance automatically after the disturbance ceases.

Criterion C: Temporary loss of output, the correction of which requires operator intervention.

Criterion D: Loss of output which is not recoverable, owing to damage to hardware.

EMC test conditions

See Figure16.

Qualification Testing

Parameter	Unit (pcs)	Test condition
Halt test	4-5	$T_{a,min}$ -30 °C to $T_{a,max}$ +25 °C, 10 °C step, V_{in} = min to max, 0 ~ 100% load
Vibration	3	Frequency range: 5Hz ~ 20Hz, 20Hz ~ 200Hz, A.S.D: 1.0m ² /s ³ , -3db/oct, axes of vibration: X/Y/Z. Time: 30min/axes
Mechanical Shock	3	30g, 6ms, 3axes, 6directions, 3time/direction

Humidity	3	40 °C, 95%RH, 48h
Solder Ability	15	IPC J-STD-002C-2007

Thermal Considerations - Open-Frame

The converter is designed to operate in different thermal environments and sufficient cooling must be provided. Proper cooling can be verified by measuring the temperature at the test points. The temperature at these points should not exceed the max values in below table.

For a typical application, forced airflow direction is from Vin- to Vin+. Figure 13 shows the derating of output current vs. ambient air temperature at different air velocity.

Figure 12 Thermal test points(TOP)

Test Point	Temperature limit
Q1 Test Point	128 °C
C2B Test Point	116 °C
OTP Test Point	112 °C

Figure 13 Output power derating, 48Vin, air flowing across the converter from Vin- and Vin+

Thermal Considerations - Base plate

The converter is designed to operate in different thermal environments and sufficient cooling must be provided. Proper cooling can be verified by measuring the temperature at the test points. The temperature at this point should not exceed the max values in below table.

For a typical application, forced airflow direction is from Vin- to Vin+. Figure 15 shows the derating of output current vs. ambient air temperature at different air velocity.

Figure 14 Thermal test points(TOP)

Test Point	Temperature limit
Test Point 1	99 °C
C2B Test Point	116 °C

Application Notes

Typical Application

Below is the typical application of the AVO120-48S12 series power supply.

Figure 16 Typical application

C4: SMD ceramic-100V-1000nF-X7R-1210

C1: SMD ceramic-100V-100nF- $\pm 10\%$ -X7R-1206

C2: 100 μ F/100V electrolytic capacitor, High frequency and low ESR

C3: 470 μ F/100V electrolytic capacitor, High frequency and low ESR

C5 C6: SMD ceramic- 22nF/1000V/X7R-1210

L1: 1320uH- $\pm 25\%$ -4A-R5K-21*21*12.5mm

Remote ON/OFF

Either positive or negative remote ON/OFF logic is available in AVO120-48S12-4. The logic is CMOS and TTL compatible.

Below is the detailed internal circuit and reference in AVO120-48S12-4.

Figure 17 external Remote ON/OFF circuit

Trim Characteristics

Connecting an external resistor between Trim pin and Vo- pin will decrease the output voltage. While connecting it between Trim and Vo+ will increase the output voltage. The following equations determine the external resistance to obtain the trimmed output voltage.

$$R_{adj_down} = \left(\frac{511}{\Delta\%} - 10.22 \right) k\Omega$$

$$R_{adj_up} = \left(\frac{5.11 V_{out} (100 + \Delta\%)}{V_{ref} \Delta\%} - \frac{511}{\Delta\%} - 10.22 \right) k\Omega$$

R_{adj_down} :Value of external adjustment resistor which shall be connected between Trim and –Sense for trimming down.

$\Delta\%$ Output voltage change rate against nominal output voltage.

R_{adj_up} :Value of external adjustment resistor which shall be connected between Trim and +Sense for trimming up.

Vout: Nominal output voltage.

Vref = 1.225 V

When trimming up, the output current should be decreased accordingly so as not to exceed the maximum output power and the minimum input voltage should be increased as shown in below figure.

Figure 18 Trim up

Figure 19 Trim down

Figure 20 Trim up curve at full power

Input Ripple & Inrush Current and Output Ripple & Noise Test Configuration

Figure 21 Input ripple & inrush current output ripple & noise test configuration

Vdc: DC power supply

L1: 12 μ H

Cin: 220 μ F/100V typical

C1 ~ C4: See Figure 16

Note: Using a coaxial cable with series 50 Ω resistor and 0.68 μ F ceramic capacitor or a ground ring of probe to test output ripple & noise is recommended.

Sense Characteristics

If the load is far from the unit, connect S+ and S- to the terminal of the load respectively to compensate the voltage drop on the transmission line.

If the sense compensate function is not necessary, connect S+ to Vo+ and S- to Vo- directly.

Weight

The AVO120-48S12(Open-frame) weight is 26g with +/-10% tolerance.

Soldering

The product is intended for standard manual, reflow or wave soldering.

When reflow soldering is used, the temperature on pins is specified to maximum 260 °C for maximum 10s. When wave soldering is used, the temperature on pins is specified to maximum 260 °C for maximum 7s. When soldering by hand, the iron temperature should be maintained at 300 °C ~ 380 °C and applied to the converter pins for less than 10s. Longer exposure can cause internal damage to the converter.

The maximum exposure temperature for the body of the unit is 245 °C , and the termination (solder) temperature for lead-free solders should be 270 °C .

Cleaning of solder joint can be performed with cleaning solvent IPA or simulative.

Assembly

The maximum length of the screw driven into the heat-sink is 3.3mm.

Hazardous Substances Announcement (RoHS of China)

Parts	Hazardous Substances					
	Pb	Hg	Cd	Cr ⁶⁺	PBB	PBDE
AVO120-48S12 series	x	x	x	x	x	x
x: Means the content of the hazardous substances in all the average quality materials of the part is within the limits specified in SJ/T-11363-2006 √: Means the content of the hazardous substances in at least one of the average quality materials of the part is outside the limits specified in SJ/T11363-2006 Artesyn Embedded Technologies has been committed to the design and manufacturing of environment-friendly products. It will reduce and eventually eliminate the hazardous substances in the products through unremitting efforts in research. However, limited by the current technical level, the following parts still contain hazardous substances due to the lack of reliable substitute or mature solution: 1. Solders (including high-temperature solder in parts) contain plumbum. 2. Glass of electric parts contains plumbum. 3. Copper alloy of pins contains plumbum						

Record of Revision and Changes

Issue	Date	Description	Originators
