

ARTESYN LGA C SERIES

15 to 100 Watts

Advanced Energy's Artesyn LGA C series is a non-isolated DC-DC converter that provides a cost-effective high density power solution in a low profile, surface-mount land grid array package for space sensitive applications. The converter accepts a wide range 3.4 to 14 VDC input and has a 15 to 100 watts power output rating. Its output voltage is adjustable from 0.59 to 5.1 VDC to accommodate a wide variety of silicon power needs. Standard features include remote sense, remote enable and voltage margining. LGA C series converters offer resistor-programmable undervoltage lockout, as well as non-latching short-circuit and overvoltage protection.

SPECIAL FEATURES

- 3, 6, 10 and 20 A output current rating
- Wide input voltage range:
3.4 to 14 V
- Adjustable output voltage:
0.59 to 5.1 V
- Excellent transient response
- High efficiency
- Output margining
- Power enable
- Minimal airflow requirement
- Termination voltage capability
- Ultra compact profile and footprint
- RoHS compliant
- Remote sense
- Termination voltage capability

SAFETY

- Designed to meet EN60950
- International Standards for Solderability: J-STD-002B IEC-60068-2-58

APPLICATION EQUATIONS

Setting Output Voltage

Default output voltage: 0.591 V

The output voltage may be adjusted with a resistor placed between the "Trim" and "-Sense" pin.

The formula for calculating the value of this resistor is:

$$R_{\text{trim}} (\text{k}\Omega) = \frac{1.182}{V_{\text{out}} - 0.591}$$

See Technical Reference Note for other trimming methods.

Setting Margin Control

To margin the output up, pull the margin control pin high. To margin down, pull the margin control pin low. If the pin is left floating, the feature is disabled. The maximum margining range is $\pm 33\%$ of the output default voltage setting, with maximum output at 5.5 V

$$V_{\text{margin_up}} = 0.1182 * \frac{R_{\text{margin}}}{R_{\text{ofs+}}} * \frac{R_{\text{trim}} + 2\text{k}}{R_{\text{trim}}}$$

$$V_{\text{margin_down}} = 0.1182 * \frac{R_{\text{margin}}}{R_{\text{ofs-}}} * \frac{R_{\text{trim}} + 2\text{k}}{R_{\text{trim}}}$$

Setting Output Voltage

Default Turn-on voltage: 2.9 V (300 mV Hysteresis)

The Turn-on voltage may be adjusted with a resistor placed between the "Enable" and "Ground" pins.

The formula for calculating the value of this resistor is:

$$R_{\text{uvlo}} (\text{k}\Omega) = \frac{14.81 * 6.81}{(6.81 * V_{\text{Turn_on}}) - 18.16}$$

Setting Under Voltage Lock Out – 20 A Models

Default Turn-on voltage: 4.3 V (300 mV Hysteresis)

The Turn-on voltage may be adjusted with a resistor placed between the "Enable" and "Ground" pins.

The formula for calculating the value of this resistor is:

$$R_{\text{uvlo}} (\text{k}\Omega) = \frac{30.1 * 4.22}{(8.577 * V_{\text{Turn_on}}) - 34.32}$$

Notes:

1. Measured as per recommended minimum system capacitance.
2. $di/dt = 10 \text{ A}/\mu\text{s}$, $12 \text{ Vin} = \text{Norm}$, $T_c = 25^\circ\text{C}$, load change = 50% to 100% I_{max} .
3. Internal input capacitance is rated 16 Vdc maximum.

External input fusing is recommended.

ABOUT ADVANCED ENERGY

Advanced Energy (AE) has devoted more than three decades to perfecting power for its global customers. AE designs and manufactures highly engineered, precision power conversion, measurement and control solutions for mission-critical applications and processes.

Our products enable customer innovation in complex applications for a wide range of industries including semiconductor equipment, industrial, manufacturing, telecommunications, data center computing, and medical. With deep applications know-how and responsive service and support across the globe, we build collaborative partnerships to meet rapid technological developments, propel growth for our customers, and innovate the future of power.
